Subject: New Offices

Greetings from the new Red Cross offices in Temple and Killeen!

The move is complete but the unpacking is far from over. I want to thank everyone who has helped us with the move. We are thrilled to be in our new offices and we hope the offices better serve the community.

Some of our contact information has changed. Please update your files. The Belton address and phone numbers are no longer valid, please delete from your records.

Mid-Tex American Red Cross
1003 Medical Drive

From: Steve S. Bosshard (NU5D)
Topic: 4 Message: 4

We are up to 5 members. Archiving is now turned ON so that messages are retained up to 32MB. Messages can be viewed at the yahoogroups site

http://groups.yahoo.com/group/Temple_ARC/

Attachments are removed to help prevent virus attacks. You can check in without revealing your address using the web site access.

That is it for this morning,

Steve

PS - suggestions, criticism, gripes, etc, welcomed. ssb

5. Acronyms for Data Communications Folks

Yahoo group: Temple_ARC
Date: 2003-08-19 10:52:53 UTC
From: Steve S. Bosshard (NU5D)
Topic: 5 Message: 5

Abbrevations for ISDN and Data Communications

1TR6 (Ger) FTZ regulation (close to CCITT Q.930/931)
2B1Q 2 binary data, 1 quarternary redundance
3PTY Three Party Service (I.254 B)
4B3T 4 binary data, 3 ternary redundance (MMS43)
5B6B 5 binary data, 6 binary redundance (code for OFT lines)
a/b two wire phone connection (T&R)
ABM Asynchronous Balanced Mode (-> SABME)
ABME ABM extended
ACA Asynchronous Communication Adapter
ACD Automatic Call Distribution
ACFA Advanced CMOS Frame Aligner PEB2030
ACI Answer Controller Interface (IOM2 Monitor Command)
ACIA Asynchronous Communications Interface Adapter
ACK Acknowledge
ACM Address Complete Msg. (SS7: in ISUP)
ACSE Association Control Service Element
ACU Automatic Calling Unit
ADC American Digital Cellular
ADC Analog to Digital Converter
ADCCP Advanced Data Communication Controll Procedure
ADMA Advanced DMA Controller
SAB82258
ADPCM Adaptive PCM
AERM Alignment Error Rate Monitor
AFE Analog Front End
AFI Authority and Format Identifier (ISO 7498)
AGND Analog Ground
AI Activate Indication (C/I channel code)
AI Artificial Intelligence
AIS Alarm Indication Signal
AIU AI Upstream
ALE Adress Latch Enable
AM Amplitude Modulation
AMC Add-on Module Connector (-> SIPB)
AMI Alternate Mark Inversion Code
ANM Answer Msg. (SS7: in ISUP)
ANS Answer Msg.
ANSI American National Standards Institute
AOC Advice of Charge (I.256 B)
AP Application (OSI Layer 7)
APD Avalanche Photo Diode
API Application Interface
APPC Advanced Program to Program Communication (IBM)

AR Activation Request (C/I channel code)
ARCOFI Audio Ringing Codec Filter PSB2160
ARCOFI-SP ARCOFI + speakerphone function PSB2165
ARCOS ARCOFI Coefficient Support Program
ARCOTI SIPB Telephone Module
ARD AR Downstream
ARL Activation Request Local loop (C/I channel code)
ARM Activation Request Maintenance (C/I channel code)
ARM Asynchronous Response Mode
ARN Activation Request
ARQ Automatic Repeat Request
ARU Activation Request Upstream
ASCC2 Advanced Serial Communication Controller
SAB825??
ASCII American Ntl. Standard Code for Information Interchange
ASE Application Service Element
ASIC Application Specific Integrated Circuit
ASM Analog Subscriber Module
ASP ARCOFI Signal Processor
AT&T American Telephone & Telegraph
ATD Async. TDM
ATI Awake TI
ATM Analog Trunk Module
ATM Asynchronous Transfer Mode
AU Access Unit
AUP Access Unit Port
AW (Ger) termination resistor
AWI Awake Indication
B8ZS Bipolar with 8 Zeros Substitution (T1 PRI)
BA Basic Access
BAKT (Ger) Basic Access Concentrator
BAMX (Ger) Basic Access MUX
BAS Basic Activity Subset (T.62, BAS of OSI session layer)
BBD0/1 Binary 0s or 1s detected in B and D channels
BCC Block Check Character
BCCP Bearer CCP
BDS Basic Data Service
BEL Bell
BER Bit Error Rate
BHC Busy Hour Call
BIB Backward Indicator Bit (SS7)
BICU Bus Interface Control Unit
BIFIFO Bidirectional FIFO
BIR Bit Receiver
BIR Bus Interface Register
BISDN Broadband ISDN
BISYNC Binary Synchronous Communications
BIT Bit Transmitter
BITR Bit Transceiver
BLA Blocking Acknowledgement (SS7: in ISUP)

BLO Blocking (SS7: in ISUP)
BMU Basic Measurement Unit (DIP)
BOC Bell Operating Companies
BORSCHT Battery, Overvoltage, Ringing, Supervision, Coding, Hybrid,
Testing
BOP Byte Oriented Protocol
BOS Bit Oriented Signaling
BPSK Binary PSK
BR Bit Robbing (CAS-BR)
BRG Baud Rate Generator
BS Backspace
BSI British Standards Institution
BSN Backward Sequence Number (SS7)
BT British Telecom
BVS Basic Voice Service
C/I Command/Indicate
CA Collision Avoidance (->CSMA/)
CAM Communication Access Method
CAM Computer Aided Manufacturing
CAM Content Adressable Memory
CAM Control Administration Module
CAN Cancel
CANC Cancel (I.451)
CAS Cannel Associated Signaling
CBA Change Back Acknowledgement (SS7: in MTP)
CBD Change Back Declaration (SS7: in MTP)
CBEMA Computer and Business Equipment Manufacturers' Assc.
CC Common Channel (CAS-CC)
CC Connection Confirm
CC Country Code (ISO 7498)

From: Steve S. Bosshard
Topic: 8 Message: 8

For those of you interested in dissolving cured epoxy.

Well, After Speaking with my friend Chuck here is what I found out.

The product is called Attack. It seeps into the epoxy, makes it gummy, and then turns it into something that just breaks apart. He says it is very effective.

Safe on plastics? Chuck uses a plastic 35 mm film can to soak items in Attack when they are stubborn to remove.

Other stuff? He soaks pearls in it will no ill result.

He purchases it at a Jewelry Supply house in Austin. Bout $6 a pint can.

I told him to get me a couple next time he orders and I will swing by and pick them up.

There is a supply house in Dallas. It is called SWEST or Southwest. They usually sell to approved account holders only but I think they might sell tools and the like to hobbyists.

I bet you can find Attack Epoxy Remover on the Internet somewhere.

9. Hams a Bright Spot During Power Blackout

Yahoo group: Temple_ARC
Date: 2003-08-20 01:19:54 UTC
From: Steve S. Bosshard (NU5D)
Topic: 9 Message: 9

Hams a Bright Spot During Power Blackout
NEWINGTON, CT, Aug 15, 2003--When a blip on the electricity distribution grid August 14 took out power to at least a half dozen states in the eastern US, many Amateur Radio operators were ready and able to provide whatever assistance they could. Hardest hit were metropolitan areas like New York City, Detroit and Cleveland. In New York, residents and commuters found themselves stranded in electricity-dependent elevators and subway or rail cars while visitors ended up stuck at airports, which were forced to shut down. With the cellular telephone system overloaded or out altogether, the incident turned into a test of Amateur Radio's capabilities to operate without commercial power.

"It was a good drill," said New York City-Long Island Section Emergency Coordinator Tom Carrubba, KA2D. But, he adds, it was a cautionary tale too. "The lesson is that everybody gets a little complacent," he said. "Have emergency power backup and make sure it's working!" Some repeaters in the blacked-out Greater New York City area--including the primary 147.000 "TAC 2" machine--were down, but several others remained on the air with emergency power.

By and large, Carrubba said, the system worked according to plan, and ARES members did what they were trained to do.

"It's going to show the worth of Amateur Radio," he said of the blackout response. "There were people on the air immediately."

Diane Ortiz, K2DO, the Public Information Coordinator for NYC-Long Island was one of them. When power went down in her Suffolk County community, she started up an informal net on the Long Island Mobile Amateur Radio Club's 146.85 repeater. Over the next 20 hours or so, the net passed approximately 500 pieces of what Ortiz described as largely "health-and-welfare traffic." A lot of it was on behalf of individuals stuck in the city and needing to contact family members.

"People are getting on and helping," she said. In addition to handling messages, amateurs also relayed useful information, such as which stores or filling stations were open and operating. Many radio and TV stations went dark as a result of the power failure, and hams were able to help fill the information void, Ortiz said.

In the Big Apple itself, ARES New York City-Long Island District Emergency Coordinator Charles Hargrove, N2NOV, remained at the city's Red Cross Headquarters in Manhattan, where power was restored around 5 AM.

"There are some power fluctuations going on, and that is the main concern right now--that power may go off again," Hargrove told ARRL.

ARES support of Red Cross operations, which began yesterday, continues. ARES teams are providing communication for the Red Cross Emergency Response Vehicles (ERVs) set up at main transportation centers in Manhattan--Grand Central Station, Penn Station and at the Port Authority Terminal. ARES members also accompanied ERVs called into action to follow New York Fire Department personnel on more than two dozen fire calls.

"After a long night of operations, some ARES members went home to get some rest around 6 AM," Hargrove said.

RACES organizations activated in most Greater New York City area counties after a state of emergency was declared. Some ARES teams--including a few across the Hudson River in New Jersey--activated or remained on standby to help if called upon. In New Jersey, a net set up on a back-up repeater established communication with the Red Cross lead chapter's N2ARC in Princeton--staffed by members of Mercer County ARES/RACES--and other New Jersey ARC chapters.

The state of emergency included five counties in northern new Jersey, said SEC Steve Ostrove, K2SO. He spent about four hours at the EOC in Elizabeth after the blackout began. "The Elizabeth Police were impressed with the information I was able to provide," he said. The net stood down at about 10 PM after telephone communication among the Red Cross chapters had been reestablished and power began to be restored.

In upstate New York, Fred Stevens, K2FRD, says the situation reminded him of the 1964 power blackout in the eastern US. "This is an emergency communicator's wildest fantasy: a major power outage in which we can demonstrate our preparedness," he said.

In his county, Chenango, ARES has been activated and the local EOC is staffed by Amateur Radio operators and the Chenango Amateur Radio Emergency Service net is up and running with stations on battery power and standing by. "We are ready for whatever might happen," Stevens said.

Comments posted on the HamsEF reflector by Ken Davis, KB2KFV, who's president of the Rensselaer, New York, County ARES/RACES Club reflected that attitude.

"It seems that the amateurs were better prepared than the government sector," he said. "Amateurs in this area were up and on the air before there was any response from local government." Davis said Rensselaer County EC and Chief RACES Officer Jim Noble, K2ZP, activated ARES and mustered a net on the Troy Radio Club RACES repeater, requesting stations to standby and monitor the frequency for updates.

Michigan and Ohio
Michigan Section Manager Dale Williams, WA8EFK, reports scattered ARES activations in his state. Williams, who lives in Dundee south of Detroit, was without power this morning and relying on his emergency generator. "It could be another 48 hours before power is restored," he said. Some ARES teams in Michigan were providing assistance to emergency operations centers and to the Red Cross, because the relief agency's telephone system relies on

commercial power. Nets have been brought up on both HF and VHF frequencies.

In Ohio, Section Emergency Coordinator Larry Rain, WD8IHP, reports that all ARES organizations in northern Ohio were activated after the power grid went down. Still going strong are ARES teams in Cleveland and Akron--both still without power. "ARES is handling communication support for Ohio Emergency Management in the affected cities and communities," Rain said. Power has been restored in Toledo, however.

Rain reports a power surge that occurred when the electricity came back on disrupted the Richland County Hospital's telephone system. "Amateur Radio was there to provide back-up communication until 4:30 this morning," he said. Ohio VHF and UHF nets and the Ohio SSB net on HF have been handling blackout-related traffic.

Nancy Hall, KC4IYD--who lives 20 miles west of Cleveland--said she's glad of two things: That she had taken the ARRL Emergency Communications Level I class, and that she and her husband have an emergency generator. "We used it to run the fridge for about two hours and then used it to run the 2-meter rig and HF rig to listen to the ARES nets," she said.

She said she just received a follow-up survey on the emergency communications class that asked if she had used any of the information she learned.

"I can now say, 'yes,'" said Hall, who noted that she's now signed up for the Level II class.

"I will again highly recommend them to anyone who wants to learn more about emergency communication."

She and her husband also made use of their BayGen windup radio to listen to local broadcasts. "We also own a hand-crank flashlight," she added.

She said the family put aside drinking water early in the blackout--which turned out to be a good thing, because their community's emergency generator was only good for about two hours to run the water supply's pumps.

"I have to say that being a ham and knowing about emergency preparedness did make life easier for me and my family," Hall said.

New England
New England states were far less affected by the blackout since most operate on an altogether different power grid than the one that failed. New England area ARES/RACES operators were in standby mode after the blackout rippled through the system to the south and west. Only Connecticut and sections of Western Massachusetts reported significant outages, and ARES nets activated in both states.

ARRL Eastern Massachusetts PIC Jim Duarte, N1IV, reports the ARES/RACES response in the Bay State was "quick and organized, showing that our recent drills and training sessions have proved beneficial."

Western Massachusetts SM Bill Voedisch, W1UD, reports the Leominster EOC was activated on a standby basis. Although he is equipped with a diesel-powered generator to supply his house and ham shack, his part of Massachusetts suffered no power losses.

Parts of Berkshire County in extreme western Massachusetts suffered from the blackout, although power was restored fairly promptly there. Bill Sexton, N1IN/AAR1FP, an Army MARS member, said his emergency power capability permitted him to run his station and maintain e-mail contact.

"We had the Northeast SHARES (National Communications System HF Shared Resources Program) up and running cross-country on a Condition Two readiness alert," Sexton said. He reports that when he called in on the SHARES channel, a MARS station in Nebraska responded to say he was ready to handle any relays.

"The experience proved once gain the great strength of ham radio in an emergency," Sexton said. "It is self-starting, and it is everywhere."--Steve Ewald, WV1X, contributed information for this story

10. Ham Radio Steps In When Technology Fails

Ham Radio Steps In When Technology Fails
Radio Operators Win Renewed Recognition

POSTED: 1:39 p.m. EDT August 19, 2003
UPDATED: 1:51 p.m. EDT August 19, 2003

HARTFORD, Conn. -- When technology failed on a massive scale last week, some old-fashioned broadcasting stepped into the breach as ham radio operators took to the airwaves to reach emergency workers.

For millions of people in the Northeast and Midwest, the Aug. 14 outage took access to e-mail and the Internet with it. Landline and cellular telephones were jammed by a crush of calls.

But the ham radio, which developed during the World War I era, connected firefighters and police departments, Red Cross workers and other emergency personnel during the most extensive blackout in the Northeast since 1977.

POWER OUTAGE
Utilities
Connecticut Light & Power
ISO New England
Northeast Utilities

Power FAQ
How Power Grids Work
What To Do During A Blackout

Ham operators are not dependent on a server or cell tower. They can operate with battery backups.

"When everything else fails, the ham radio is still there," said Allen Pitts, a ham operator in New Britain. "You can't knock out that system."

The radios are operated by a network of volunteers organized by the Newington-based American Radio Relay League.

Ham radio's importance won renewed recognition after the Sept. 11, 2001, attacks. ARRL won a federal Homeland Security grant of nearly $182,000 to train amateur radio operators in emergency operations to help during terrorist attacks.

"It's incredible the differences you're seeing, the large cadre of people who know what they're doing," Pitts said. "It's making a major difference."

Tom Carrubba, a coordinator for ARRL in New York City's five boroughs and two counties on Long Island, said volunteers went to work immediately after power went down Thursday afternoon.

"In five minutes, guys were on the air with the Red Cross and Office of Emergency Management," he said.

During other disasters, such as severe weather, ARRL volunteers and coordinators activate telephone trees, Carrubba said. On Thursday, they instead hit their assigned frequency or staffed an emergency operations center.

In the New York-Long Island region, with a population of nearly 10 million, about 100 ham radio operators handled the situation, Carrubba said. Some volunteers headed to a Red Cross headquarters or shelter, fire department, or hospital, he said. One hospital was temporarily powerless, and ARRL volunteers provided communications to ambulances until electricity was restored.

Carrubba estimated that operators handled 800 to 1,000 communications from Thursday afternoon until early Friday.

FCC chief of staff resigns

by Heather Forsgren Weaver
Aug. 19, 2003

WASHINGTON

Marsha MacBride, chief of staff to FCC Chairman Michael Powell, said Monday that she will soon leave the Federal Communications Commission to pursue new opportunities.

"Marsha is my most trusted and loyal adviser," said Powell. "She is an exceptional leader who has worked tirelessly to make the FCC more efficient and more responsive to the needs of the American public. She is a friend, and I will sorely miss her as we forge ahead with the FCC's work."

MacBride had been a longtime FCC employee, including a stint in Powell's office when he was a commissioner, who left to join The Walt Disney Co. But Powell lured her back to run the commission when he became chairman in January 2001. She also led the FCC's Homeland Security Policy Council-a follow-on to her role as executive director of the FCC's Task Force on Year 2000 Conversion.

She graduated from Douglass College, Rutgers University magna cum laude with a bachelor's degree and received her law degree from the George Washington University School of Law.

MacBride's departure re-started the seemingly endless speculation that Powell has had enough of the FCC and that he might too leave, but he squelched those rumors Monday at the Progress & Freedom Foundation conference in Aspen, Colo. "I'm going to stick around," he said.

RCR Reporter Dan Meyer contributed to this report from Aspen, Colo.

I am passing this on as some of you may not know about this and it is important;

Something all Texans should know, especially since this has received very little publicity. Your Texas driver's license has a phone number on the back, just above the bar code on the lower left side: 1-800-525-5555. (It's VERY SMALL PRINT, but it IS there.) This number can be called for emergency assistance on the highway or wherever you might have trouble while in your car. A service truck will be sent to you. This service is state operated, paid for with your tax dollars. If you are ever stranded, just call the number on your driver's license...help is on the way. A state trooper will be sent to make sure all is well.
This one is REALLY is worth passing on to everyone you know!

Well, Its starting to grow a little - up to 10 members.

Now we need some stimulating discussion or something
informative.

For current events there is the Hillsboro Balloon launch
on the 30th with ATV and 2m 70c crossband and a parrot
repeater.

Also Broadband over Power Lines may impact
HF communications.

At our shop finished semi annual proof of performance
on the Bell County Communications system.

Should start receiving equipment for the voting system soon.

73,

steve

Official touts FCC's UWB work

by Heather Forsgren Weaver
Aug. 21, 2003

WASHINGTON

Edmond Thomas, chief of the FCC's Office of Engineering and Technology, continued his cheerleading of ultra-wideband technologies Thursday when he gave reporters a rare glimpse into the technical engineering side of his job by taking them on a tour of the FCC's Engineering Lab.

A major theme of the tour was the work that engineers are doing with various UWB devices. Thomas announced that the Federal Communications Commission is now testing actual UWB devices. In the lab Thursday were real-life examples of ground-penetrating radar devices.

During an outdoor demonstration, Thomas and other engineers showed reporters that a handheld global positioning system satellite device did not experience interference when placed directly in the path of the UWB device. They contrasted this with the impact to the GPS receiver from a mobile TV receiver that was recently taken off the market because it interfered with GPS.

Thomas came to the FCC as the final battle for UWB authorization was being waged in late 2001. Since the limited authorization was adopted in early 2002, he has consistently downplayed the concerns of the GPS community, including some mobile-phone carriers.

Thursday's tour was another event in his campaign to prove that UWB has great benefits and causes little harm.

Austria

According to Herbert Heitzmann, OE2HHN, NCI's National Chapter Chairman in Austria, he has been informed by the President of OeVSV, the IARU-member society in Austria, that the Austrian telecommunication authory will grant HF access for all CEPT Class 2 licences provisionally, starting some time in September 2003, pending formal changes to the Austrian amateur radio rules.

In the future, the Austrian rules and regulations regarding amateur radio will be updated, with CEPT Class 2 licensees getting CEPT Class 1 status without any additional exam. (Editor's note: Under the CEPT "HAREC" agreements, the written tests for Class 1 and Class 2 are the same. The difference in privileges between the two classes was based on having passed a Morse proficiency test.)

Norway

Sverre Holm, LA3ZA, reports: "The CW requirement has been removed in Norway. The former three licence classes LA (12 wpm), LB (5 wpm, reduced HF power) and LC (no code, VHF) have been merged into one. The LC licensees will be given new LA callsigns, and the ones with LB may keep it or get a new LA callsign. My guess is that some of them will keep it, since the LB series only has two letters (e.g. LB1XY) while all new LA signatures now have three letters, currently ending in an A (e.g. LA1XYA).

The Norwegian PTT announced this yesterday (August 16) at the annual meeting of the NRRL."

New Zealand

Removal of Amateur Service Morse Requirement in the HF Bands
15 August 2003 (from the NZ MED Website)

The recent ITU World Radio Conference in Geneva (9 June to 4 July 2003) reviewed Article 25 of the International Radio Regulations relating to the Amateur Service. The Conference decided that the ability to send and receive morse code is no longer a requirement for amateurs to use the HF bands below 30 MHz. Administrations now have a choice as to whether morse code should continue to be a requirement for amateur operation in the HF bands.

The ITU decision aligns with New Zealand's position on this issue. Consequently, the Ministry intends to remove morse operating competency from the syllabus for the New Zealand General Amateur Operator's certificate. The Ministry is also considering related matters such as the ongoing requirement

for a limited amateur operator's certificate, reciprocal licensing arrangements, and other consequential changes to the examination syllabus.

The changes will be implemented as part of the next round of updates to the New Zealand Radiocommunications Regulations 2001, which is expected to occur later in 2003. Details of the final arrangements will be published on this web site and communicated by letter to all licensed amateurs .

Until the necessary changes to the regulations are made, however, holders of Limited Amateur Operator's certificates are not entitled to operate on bands below 30 MHz.

In the meantime the Ministry will be consulting with the New Zealand Association of Radio Transmitters Inc.and other parties who are interested in having an input to the development of policy on the changes. Anyone who is interested in providing such input should write to The Manager, Radio Spectrum Planning, Ministry of Economic Development, PO Box 1473, Wellington, or email [EMAIL=info@....]info@....[/EMAIL]"

...2 points to consider 1) how many amateurs are there in each of these countries, COMPARED to the total AMATEUR operators in the U S A ? 2) just because they jump off a cliff, should you ?

Why don't we request the FCC to add an endorsement for code ops,
like they usta do for RADAR on the commercial ticket ? That way everybody
would be happy.
(yeah right)
Code requirement or not, all you di-dahs out there can still
operate that way, no one sez you can't...
BTW: I was a USN 3904 & never operated once. Why do you think
that is ?

Mike

No, they'll delete your post because you're acting like a LID.

They also deleted my response to you, so I doubt it has anything
to do with your stance on code/no-code.

It's probably got more to do with your venomous, hateful
delivery.

The ARRL already offers Morse proficiency certificates for those
who feel the need for a piece of paper that says they can operate Morse at
some particular speed.

I already hear that on the bands more than I care to. And it's
from people who have passed the code exam. I hear it much less on the 2
meter repeater which is full of (gasp) no-code operators.

CW doesn't filter any idiots out. It has been demonstrated over
and over in these threads.

As long as there is still testing to upgrade your license, the
Amateur bands wont turn into CB land.

Dont forget, ham bands still have an enforced code of ethics.
When was the last time you heard of a Good Buddy CBer getting a citation for
using profanity or being vulgar?

Subject: JOTA

Hopefully, one of these addresses will get this message to you. I would like to set up something for Jamboree on the Air (JOTA) for the local scouts. I will need one or several general class or higher hams to set up portable stations, probably in one of the parks, on OCT 18 -19 so that area scouts can participate in JOTA. I am going to a roundtable(leaders meeting) in Lampasas tonight to generate some interest and get local hams the contact information. The scout leaders will coordinate with hams to provide a place to set up and other activities (suggestions accepted! ---some are: antenna building, Morse code practice, skywarn info-- how scouts can help, simple electronics demonstrations etc.)

e-mail me at my work address: mailto:caseg@...

Thanks

From: john, ke5c
Topic: 19 Message: 19

does anyone else worry about spam? i get a bunch daily because i have (not always carefully) used the same e-mail address for some time. e-mail scavanging "crawlers" are a reality:

http://www.ezoons.com/2003/03/18/email_crawlers_are_evil.html

http://www.123ecommerce.com/Email-Marketing/Tips-Tricks-Articles/Extractors%20and%20Crawlers%20and%20Bulk,%20Oh%20My.asp

and i wonder if having our e-mail addresses public on the tarc webpage is a good idea - maybe it is. i know i could just ask to not have mine displayed, but i am thinking about the bigger problem.

there are a number of solutions, but they all involve removing email addresses from the portion of a webpage visible to a webcrawler or by password protecting the file or directory where the e-mail listing is made public.

on my homepage and my church's e-mail page i used php to dynamically build the e-mail interface, and this isn't done until a user interacts with the website, something crawlers don't do:

http://www.kkn.net/~ke5c/mailme.php

http://www.templebiblechurch.org/mail2.php

view the source of these webpages and try to find an e-mail address! there are numerous other javascript, cgi, etc., solutions which work the same way.

another club requires logining into their e-mail page and provides any visitor the login information via a graphic which hides it from any web-crawlers:

http://www.ctdxcc.org/members.html

just food for thought.

20. Texarkana Outage

Yahoo group: Temple_ARC
Date: 2003-08-23 03:19:55 UTC
From: Steve S. Bosshard (NU5D)
Topic: 20 Message: 20

City loses Internet, cell service Damaged fiber optic blamed for problems
By SABRINA MCCORMICKand JODI SHERIDAN
Texarkana Gazette

Texarkana Gazette

Long-distance, cellular, fax, Internet and 911 services were down in Texarkana
Monday after a fiber optic cable about five miles outside Marietta, Texas, in
Northwest Cass County was cut by a state highway construction crew.
New Boston, Hooks, Redwater, Hughes Springs, Simms, Maud, DeKalb and some areas in
southwest Arkansas were also affected.

Officials with VALOR Telecom learned of the outage about 3:45 p.m. and identified
it to the Hughes Springs area of Cass County where the fiber optic hardware is
located, VALOR representative Yolanda Franklin said in a statement.
Crews began replacing the damaged cable about 6:30 p.m. and estimated service
could be restored by 11 p.m. Monday.
The outage left many area Internet and cellular phone customers without service
and trying to get some answers.
Jay Butler, the general manager of CableONE, said the company's Internet service,
which caters to about 6,000 customers, was down. "Whatever is causing the phone
and cell lines not to work is the same problem that is causing the Internet not to
work," said Butler.

Greg Saulsbury, the owner of TXK.net, which services several thousand customers,
said there was only one line calling out of Texarkana, that one belonging to AT&T.
When the Gazette contacted the local VALOR office Monday evening, a customer
service representative said the line cut belonged to AT&T. "That sounds about
right, because VALOR and others use strands of fiber like that," said Saulsbury.

Saulsbury said he didn't have a timeframe in which the problem could be fixed, but

it would probably take somewhere in the ballpark of four to six hours. Attempts to
reach AT&T officials were unsuccessful. However, cell phone service for that
company worked while cell phone service for Sprint and Alltel did not. VIDCOM
Center was the only Internet provider that was not completely shut down on
Monday.

Morris Allen, president and CEO of VIDCOM, said they use BGP routing, which
utilizes built-in redundancies. Allen explains BGP routing is nothing new to
Internet Service Providers.

"We go out to different carriers and buy band widths from each of them so you
don't put all your eggs in one basket," Allen said. He explains a redundancy is
simply an emergency back-up system similar to ones used on space shuttles in case
something goes wrong.

Allen said, for example, it's like having water piped in from many sources to one
location, if one pipe gets severed or clogged, a back-up pipe still has water. "We
are prepared for issues like this, most of our customers are commercial and if
they are not up, they are not making money," Allen said. "We have one router that
receives 117,000 hits a day," He said.
Allen said a router is a computer, which operates much like a roadmap that directs
signals from point a to point b.

"The router does nothing more than get you to the site you want to view," he said.
Cellular and Internet services were not the only communications experiencing
difficulties. The 911 system in Miller County and the Bi-State Justice Building,
which services the two Texarkana police departments and Bowie County Sheriff's
Department, were down as well. "There are some nonemergency numbers we've been
giving out to the public to call," said Emergency Management Coordinator Dave
Hall.

Capt. Ernest Keck with the Texarkana, Ark., Police Department and the
representative for all the agencies in Central Records and Communications said the
severed line was the culprit for the downed system and keeping people safe and

calm was their main concern. "We are also assuming responsibility for Miller County Sheriff's Office," said Keck.

Capt. Glenn Greenwell with the Texarkana, Ark., Police Department said things in
the communications department were going as well as could be expected Monday night. "We have not had an increase in calls and we've been monitoring things
pretty closely. All in all, we feel things are going as well as can be," he said.

Until service is restored, the emergency service number for Texarkana's 911 system
are 903-798-3876 or 903-798-3877.

A local bank and a discount store reported no problems in business because of the
outage in service.

From: Steve S. Bosshard (NU5D)
Topic: 21 Message: 21

Cutting the Other Wire

Scott Woolley,
09.01.03

Stephen Tang,
CEO, Millennium Cell

Tomorrow's amazing wireless technologies will be of little use if they must rely on today's crummy batteries, warns Stephen Tang, chief executive of Millennium Cell (See http://www.milleniumcell.com/index_noflash.html) in Eatontown, N.J. The main thing shackling people to their desks, he says, isn't the need for an Internet link. It's the lack of steady power.

"And that's our goal," says Tang, "to cut the other wire--the power cord."

For decades batteries have been the tortoise in the tech race. Even the best lithium-ion batteries have advanced their energy storage capacity by 10% a year, falling ever further behind the demands of the latest multifunction wireless device. There are fundamental physical limits to how much energy they can store per pound. Tang's solution is simple: Chuck the battery entirely and replace it with a tiny hydrogen fuel cell.

His breakthrough could let cell phones last up to four times as long as current batteries do between recharges. More important, his matchbook-size cells could provide far more punch, enabling a new wave of powerful energy-slurping devices.

Hydrogen hype is high, thanks in part to President Bush's State of the Union vow to spend $1.2 billion on the technology. But most fuel-cell attention has focused on powering cars. That was Tang's original goal, too, but the Wharton M.B.A.--who also holds a Ph.D. in chemical engineering from Lehigh University--began to wonder whether fuel cells might be better suited to powering wireless gadgets.

Fuel-cell systems, big and small alike, have always been limited by their ability to effectively store hydrogen and release it in the necessary doses. Millennium Cell engineers started their search for the perfect storage material from scratch, scouring the periodic table for a material that could provide enough energy to run a car without weighing it down or igniting a massive explosion in a crash. They fixed on boron, a close cousin of carbon. A gallon of a solution that is one-third sodium borohydride and two-thirds water can store the same amount of energy as a gallon of gasoline.

Tang's tiny fuel cells can power a phone for 12 hours of talk time compared with 4 hours for an equivalent-size lithium battery. They run a standard laptop for up to 8 hours. Most now fade at 3.

Tang's fuel cell is designed to be tossed in the trash, just like today's alkaline batteries. Their chemical reaction leaves behind small amounts of water and borax, a nonflammable mineral used in some laundry detergents. And the cell phone version will be contained in a package that will cost around $1.50, Tang promises. He vows that the boron-hydrogen fuel cells will hit the market by 2005.

Japanese and South Korean firms are also in hot pursuit of a working mini fuel cell. In July NEC announced it would have a 5-hour battery ready by next year. Tang hopes to double that capacity a year thereafter with a safer, cheaper version. Tang had better hurry. Millennium Cell, which went public in 2000 just before the market for public offerings slammed shut, has scant revenue and is burning through $3 million in cash every quarter. But if Tang hits his 2005 deadline, he could earn a pile--and a place in history for freeing millions of white-collar warriors who were shackled to their desks.

Or, paraphrased, what an interesting failure! I removed my mobile antenna mounting bracket:

http://www.kkn.net/~ke5c/mobile/mount.jpg

so the body shop could fix my bumper. I reattached everything, tuned to 7038 at 7:05 PM last night so I could join the Queen Bee Net in progress while I returned to work. Boy, they were hard to hear. Fortunately I decided to check the antenna tuning before I kicked the amp on, and the swr showed two interesting results. First, although I know I left the antenna tuned for 7038, the swr was high. Second, after a few moments, it went through the roof. Same thing no matter where I set the antenna tuning.

Returning home, I checked the swr into a dummy load out of the radio, into the amp, and out of the amp - all fine. Then I undid the elbow connector on the mobile antenna mount, and the swr was again fine. I reconnected everything, same problem. Then I did the wiggle. When all else fails, tap something or wiggle something else, and when I did, I could hear signals come and go. I thought surely it was the 20 year old connector on the feedline coax or the even older SO-239 bulkhead, but it turned out to be my new 90 degree elbow connector! From the looks, it's made in China or Taiwan, and it is intermittent. So, expect the unexpected I guess.

Emergency Operations Center Design

A properly designed Emergency Coordination Center (EOC) should serve as an effective and efficient facility for coordinating emergency response efforts. An EOC may serve a number of uses including operations, training, meetings and other uses. The EOC can optimize communication and coordination by effective information management and presentation. The PSI Group of Northrop Grumman Information Technology has the depth of experience and qualifications to perform this for your agency.

EOC Training

The Incident Command System (ICS) provides a management structure and system for conducting emergency operations. It is applicable to small scale daily operational activities as well as major mobilizations. ICS, provides EOC and operational staff with a standardized operational structure and common terminology. Because of this, ICS provides a useful and flexible management system that is particularly adaptable to incidents involving multi-jurisdictional or multi-disciplinary responses. ICS provides the flexibility needed to rapidly activate and establish an organizational format around the functions that need to be performed. Northrop Grumman Information Technology offers annual and refresher training for ICS operations.
EOC Consulting

An EOC is the physical location where an organization comes together during an emergency to coordinate response and recovery actions and resources. These centers may alternatively be called command centers,

situation rooms, war rooms, crisis management centers, or other similar terms. Regardless of the term, this is where the coordination of information and resources takes place. The EOC is not an incident command post; rather, it is the operations center where coordination and management decisions are facilitated.

Event Information Tracking

Managing response and recovery operations involves a tremendous amount of information. The EOC's job is to collect this information and to manage and control event information and response activities. Typically, the information flow will look something like this:
1. Incident occurs
2. Notification sent to staff
3. Status evaluated by EOC managers
4. EOC activated, Incident Log opened
5. SOPs implemented using checklists
6. Tasks assigned according to plan
7. Resource allocation (tracked in log)
8. Task performance (tracked in log)
9. Status briefings and updates to stakeholders

Information Management
All of this information will need to be managed and documented. A strong information management system will be a must. Emergency Managers need to provide a IT
Emergency Operations Center Design
PSI Emergency Operations Centers

www.northropgrummanIT.com

robust command, control, and monitoring function that will:
. Above all else - be easy and efficient to use
. Collect failure information to allow rapid and early contingency response
. Track multiple incidents and resources
. Communicate activities across the enterprise
. Provide documentation capability
Good information management tools can help contingency managers create and organize their plans as well as in

exercising and executing them. While contingency plans often end up in binders or files, a good information management system can make plans and supportive materials easily available to managers. Typically, the information flow is managed via a Computer Aided Dispatch (CAD) system, which logs and tracks events, coordinates information from disparate systems and acts as the platform for emergency first-responders (Law Enforcement, Fire and Emergency Medical Services) to receive calls from the public and manage resources in a prioritized manner.

. Operate an Alert Network
. Event Alert Evaluation and Triage
. Incident Logging
. Team Tasking
. Resource Deployment and Monitoring
. Status Boards
. Executive Briefings
. Documentation

The Ideal Information System
The ideal EOC would be an easy to use and robust information and decision management system that provides:

. Central command and control
. Inter-agency radio communications control
. Remote camera control and viewing
. Asset inventory management
. Video teleconference communications
. Geographic display of resources and incidents
. Early alert communications
. Functionality as a virtual EOC
. Secure data sharing over other networks
. Event tracking and logging
. SOP and contingency plan check-off lists
. Resource management
. Documentation of response actions

Two-way communications.a structured mechanism for receiving and sending information. Standard categorizations will be needed to route reports to the appropriate position in the Command Center. Emergency managers should be able to centrally receive

and evaluate this event information from both
inside and outside the enterprise. The system
should help manage this information in realtime
and keep records of events as they unfold.
Automated response and recovery
checklists... for all of their major functions to
ensure that the recovery is complete. The key
is to put an automated checklist in the hands
of the right person anywhere and everywhere
in the organization. Make it easy for them to
send the checklist results as data and make it
easy for managers to see the progress in
executive reports.

Alert notifications. with a sophisticated
message sorting and distribution capability so
managers can track and log multiple and
varied notifications and ensure that the right
information gets to the right individual.

Conclusion
You can be certain that good planning,
training and design will improve emergency
response and speed the recovery process.
Having good plans in place, drilling on them
and using a robust information management
system (CAD) to implement and track their
execution will prove to be invaluable, no
matter what the problem.
EOC

World's biggest battery
switched on in Alaska

By Edmund Conway

28/08/2003

The world's biggest battery was plugged in yesterday to provide emergency power to one of the United States' most isolated cities.

The rechargable battery, which at 2,000 square metres is bigger than a football pitch and weighs 1,300 tonnes, was manufactured by power components specialist ABB (See http://www.abb.com/) to provide electricity to Fairbanks, Alaska's second-largest city, in the event of a blackout.

Stored in a warehouse near the city, where temperatures plunge to -51 degrees Centigrade in winter, the battery will provide 40 megawatts of power - enough for around 12,000 people - for up to seven minutes.

This is enough time, according to ABB, to start up diesel generators to restore power, an important safeguard since at such low temperatures, water pipes can freeze entirely in two hours.

With no power lines between the state and the rest of America, Alaska is often described as an "electrical island" where tough environmental conditions and a sparse population make power cuts a way of life.

ABB's battery, the first of its scale in the world, was commissioned by Golden Valley Electrical Association (GVEA)
(See http://www.gvea.com/index.php) in Fairbanks, because the city suffers total blackouts every two or three years, as well as frequent swings in power supply.

The earthquake-proof contraption contains 13,760 NiCad cells - bigger versions of those used in many portable electronic appliances including laptop computers and radios. Each cell measures 16in by 21in and weighs more than 12 stone.

ABB, a Swiss company listed in London, is one of the companies set to benefit from the US's decision to spend between $50 billion and $100 billion improving its power grid after the blackouts this month. This follows a difficult year in which asbestos claims, corporate governance scandals and financial and business difficulties almost tore apart the company.

Peter Smits, head of the company's power technologies division, said: "This battery will improve power reliability in an area where it is vital. We have entered it for the Guinness Book of Records."

A spokesman from Guinness World Records said: "Well this battery certainly looks like being the biggest in the world, but of course we will have to check all the evidence when it comes in."

Networking From the Rooftop

MIT researchers are developing new
routing strategies for a wireless network
that hops data in the roofs of the city

By Erico Guizzo
August 29, 2003

A few weeks ago, MIT graduate student Shan Sinha canceled his broadband Internet service. Now his Net connection comes through the chimney. From a computer in the living room of his Cambridge, MA, apartment, a few blocks from the MIT campus, a cable goes into the fireplace up to the roof, where it is attached to an antenna. From there, data packets hop to another roof-mounted antenna at a nearby student's apartment. That way, from roof to roof in multiple hops, Sinha's data packets finally reach a gateway-a computer connected to the fixed Internet-at MIT's computer science building. "We can't use the fireplace," he says, "but that's the cost of free Internet."

Sinha's "chimney connection" is part of MIT's Roofnet (See http://www.pdos.lcs.mit.edu/roofnet/ and http://www.pdos.lcs.mit.edu/roofnet/faq.php and http://rn-30-wired.lcs.mit.edu/), a project to create a self-organizing wireless network in which an amorphous, unmanaged collection of cheap Linux computers equipped with Wi-Fi cards collaborate to efficiently route data packets. Each computer and roof-mounted antenna at students' apartments and MIT buildings is a node on the network and the arrangement in which they are connected to each other-the topology of the network-is constantly changing. "We want to understand how a whole bunch of computers with short-range radios can self-configure a network, forming order out of chaos," says computer science professor Robert Morris, who coordinates the project. The network has now more than 30 nodes in a 4-square kilometer area surrounding the MIT campus. "We hope to reach a hundred nodes within a few months," he says.
Research groups at universities such as Carnegie Mellon, Rice, UCLA, and the University of Illinois at Urbana-Champaign, and at companies such as Nokia, Intel, and Microsoft are developing similar systems. In each case, data packets are routed through geographically dispersed and wirelessly connected nodes that can be fixed in a building or moving with a user or vehicle. Applications of these so-called multi-hop mesh networks include systems to connect people carrying PDAs, tanks on a battlefield, or a large number of sensors in a factory plant. And community mesh networks such as Roofnet, which are much cheaper to deploy than DSL or cable hookups, are a promising way to overcome the "last mile" barrier and bring high-speed Internet access to a large number of people, especially those who live in rural areas or

other places where the infrastructure for wired broadband access is not available.

Community-owned wireless networks have appeared in several places in New York, San Francisco, Seattle, London, and other cities. These networks usually consist of a few interconnected base stations-known as wireless access points-located in windows and rooftops providing Internet connectivity in public spaces. The new generation of mesh networks such as Roofnet cover wider areas and are much more dynamic in the way they route data. Their nodes are not permanently connected; instead, they constantly revaluate the existing links and form new ones. As a result, data follows much more tortuous paths to reach the fixed Internet. And with tens or hundreds of nodes-some of them joining and leaving the network in a random fashion and thus constantly changing its topology-a difficult problem arises: how should data in these multi-hop wireless nets be routed? What paths in this labyrinth of rooftop and window antennas optimize the flow of packets?

Distance Matters
Most of the routing protocols now being proposed by mesh network researchers borrow the shortest-path strategy used in the fixed Internet. These protocols try to find the route with the fewest number of intermediate nodes between sender and destination. For the wired Internet-with its nearly static topology and reliable links-this scheme has been working pretty well: our e-mails hop from router to router and reach the other side of the world in a few seconds.

But it turns out that this shortest-path strategy might not be adequate for sending packets through the air. In a wireless network, according to the MIT group, distance matters: the longer the signal has to travel, the more it will degrade. Moreover, the link quality between nodes varies unpredictably due to such transient phenomena as trucks driving by, moisture in the air, or a pigeon sitting on the antenna. The result is a considerable amount of packet loss, transmission errors, and connections that simply appear and disappear throughout the day. A routing protocol that minimizes the number of hops ends up choosing longer distances for each hop-and therefore sending data over low-quality wireless links.

The MIT group realized that new routing strategies were necessary when they deployed an initial version of Roofnet last spring. They tried to implement some of the proposed routing protocols discussed by the Internet Engineering Task Force, the organization governing the Internet's technical standards. But while these protocols work well in theory-and are generally tested in computer simulations or small-scale, laboratory networks-they don't take into account many unpredictable factors involved in radio communication. The protocols usually assume, for example, that when one node can detect one nearby, it can communicate well with its neighbor. But that turns out not always to be true. The MIT researchers and other groups have found that many times two nodes can "hear" each other by exchanging small probe packets, but when they try to send real data, communication collapses due to inadequate bandwidth. Morris and his group decided that the best way to develop robust

wireless routing protocols was to test them with a real network, real users, and real traffic.

Other mesh network researchers say the MIT work represents an important advance for debugging these routing schemes. "Their work is grounded in real system building," says Victor Bahl, a senior researcher who leads the networking group at Microsoft Research in Redmond, WA. "The insight that you get out of building things is a lot more than you'll ever get if you just simulate things." Demonstrating that such networking is viable in a real, large-scale implementation, he says, is a crucial step toward attracting more industry attention to the technology's potential.

Deploying such a network became possible because Wi-Fi technology has gotten so cheap. A few years ago, Morris says, the price of the wireless cards would have made the project prohibitively expensive. Each Roofnet node uses an 802.11b wireless networking card installed on a cheap PC running Linux and the routing software. A coaxial cable connects the wireless card to an omnidirectional antenna. The user then connects the PC to the Roofnet node. The total cost of the equipment for each node is $685.

To deploy the network quickly, the MIT group distributes free self-installation kits to students who want to participate in the project. For these students, getting the Roofnet node running is part of the fun. "Our antenna was put up by a friend of mine who does rock climbing," says graduate student Roshan Baliga, who lives in a two-story building with no easy roof access. "He scaled the side of the apartment to get to the roof, installed the antenna, and then rappelled down."

MIT students are happy to participate in the project, especially because they can save some money. "We compared a broadband cable connection to Roofnet and couldn't tell the difference, so we cancelled the cable," says MIT senior Walt Lin, who installed the antenna on his sloped roof.

The Road Ahead
With students surfing the Web, downloading music files, and working on problem sets on remote servers, the network is running with real traffic. Now Morris and the four graduate students working with him full time on the project can test different routing strategies that better adapt to the hostile wireless environment.

Their idea to cope with the unpredictable environmental disruptions is to figure out not just whether two nodes can hear each other, but also measure how well they can communicate. Instead of finding the shortest path between two nodes, their protocols try to find the best path-the one in which data packets won't get stuck or corrupted along the way. This requires a constant monitoring of the links. Roughly once per second, each node sends out a small "hello" broadcast packet. All the other nodes record whether they receive this probe, keeping a history of the last 10 probes. So if, say, node A has sent out 10 probes and node B received 8 and node C received 4, then the routing software knows that the path A-B is better than path A-C. Also, every 15 seconds, every node sends a broadcast message that lists the nodes it knows how to reach-and the link quality for each associated path.

That way, all nodes have a complete, continually updated, routing map of the entire network-and know the optimal routes for reaching one another.

In building Roofnet, the MIT researchers found many things they didn't expect. For example, the range of the 802.11b cards and antennas vary considerably. "We're now skeptical about what manufacturers say," says John Bicket, one of the grad students working on the project. "We found nodes that couldn't talk across the street, but others could talk half a kilometer apart." The cause might be local environmental conditions or even multiple reflections of the same signal that cancel themselves out. Another surprising phenomenon is the lack of symmetry in the link transmission quality: it is not uncommon for node A to be able to send data to node B easily, while node B can't reciprocate. Such anomalies complicate the development of routing schemes.

By debugging and fine-tuning their routing schemes, the MIT researchers hope they will be able to use them in even more complicated systems. One such situation would be when nodes are not static in rooftops, but moving at different speeds in all directions-a scenario not far in the future, as more and more people carry personal digital assistants and cars are beginning to be equipped with computers. "It's a matter of tuning the protocol so that it can handle mobility," says Sanjit Biswas, another student involved in the project.

Ultimately, Morris says the group plans to release the Roofnet routing software as a freely dowloadable open source program. That means that anyone with a computer and a Wi-Fi card would be able to install the routing software and become a node in the network. Other people in other areas could also download the software and create their own rooftop community networks.

Of course, many problems still need to be addressed. First, MIT can't provide Internet access to non-MIT affiliates; the network would therefore eventually have to find other gateways to the fixed Internet. But that raises another complicated issue: most Internet service providers don't want their users sharing their bandwidth. Also, the community networking technology needs to guarantee a certain level of security and privacy. With users literally sending their data through the air, via other people's nodes, some sort of encryption will probably be necessary to avoid eavesdropping. It is also necessary to guarantee a fair, balanced used of the system, to avoid that a single user sucks all the bandwidth and clogs the network. Finally, the system needs to be robust enough to resist some more pragmatic problems-such as when snow forms in the antennas.

When the day comes, what will happen? Again, the MIT group wants to learn by doing. "We'll see," says Morris.

33. Tiny Batteries

Next Big Thing Is.....
a Really Small Battery
By Lee Dye
August 28, 2003

What's going to happen if we unleash zillions of microscopic robots to flood across our landscape, searching for God only knows what? Will we lose control? That may sound a bit far-fetched, but nanotech facts and myths are bound to crowd into the philosophical arena.

A revolution in science that could surpass the impact of the transistor or the automobile has evolved at lightning speed since its inception just a little over a decade ago, with institutions around the world scrambling for position in a world where it pays to think small. Very small.

Scientists at International Business Machines set off a technological explosion in 1990 when they used an atomic force microscope to nudge individual atoms into the right position to spell out those well-known initials, IBM. It was a remarkable achievement because something had been assembled -- although it was just a sign -- one atom at a time.

Just a few decades ago, it took many years for that kind of achievement to have much of an impact, but we're in the age of electronics now, and advancements in nanotechnology -- the field of developing very small scientific tools -- are as big today as its components are small.

According to the National Science Foundation, 17 federal agencies are into nanotechnology in a big way, supporting its development to the tune of $1 billion a year. They're into it because tiny devices so small that they can only be seen with powerful microscopes could someday carry drugs through your veins to exactly the spot where you need them, or detect hazardous materials that are invisible to the unaided eye, or power a cell phone for months.

Tiny Energy for Tiny Devices

The list of applications seems to have no end, and some experts believe consumer-electronic devices built with components only a billionth of a meter -- that's one nanometer -- in size could be in the marketplace within five years.

In a field that is so young and is moving so quickly, it's hard to see the milestones, but it has advanced from the theoretical research phase to patented techniques that will form the foundation for its growth and development.

One such patent has just been issued to the University of Tulsa for batteries that are so small that 40 could be stacked across the width of a human hair. Chemistry professor Dale Teeters and two of his former chemical engineering students, Nina Korzhova and Lane Fisher, have constructed thousands of tiny batteries, each of which can deliver up to 3.5 volts.

"These batteries aren't going to drive a flashlight," says Teeters, because they are so small their energy supply would be quickly exhausted. "There's an incredibly tiny amount of energy involved, but if you have an incredibly tiny device then the device will function for the period of time that it needs to."

Such a tiny battery could be used to drive a microbe-sized submarine through a patient's blood vessels like the one featured in the 1966 science fiction movie, Fantastic Voyage. Teeters says he used to dismiss that movie as pure fantasy, but not anymore. A company in Germany has already developed just such a "submarine," he says.

Robot-Built Mini Worlds

Other inventions are being revealed on almost a daily basis. Just last week, scientists at the University of California, San Diego, announced that they are developing something they call "smart dust." These are tiny robots, smaller than a grain of sand, that could move through an artery, or through the air, or through contaminated water, to carry medication or sniff out hazardous materials.

Others are working on tiny self-replicating and self-assembling robots that could create their own world, either on this planet or another, one cell at a time.

Teeters thinks he and his students may have an ace in their new patent, because "a battery, or at least some sort of power supply, is crucial to all of these," he says.

That's why officials with two major players in electronics, Sanyo and Panasonic, talked with him at an international conference in Paris last May. So far, no contracts, but Teeters knows he's a bit premature. At the moment, there isn't much of a market for tiny batteries, because there aren't a lot of tiny devices out there yet.

But there will be. No doubt about that.

Battle of the Robots?

And there's also no doubt but that those tiny devices will change all of our lives. And that, naturally, has a lot of people worried.

Activists around the world, from Prince Charles down (or up, depending on your point of view) are demanding that government agencies take a closer look at the impact on society from nanotechnology. What's going to happen if we unleash zillions of microscopic robots to flood across our landscape, searching for God only knows what? Will we lose control?

That may sound a bit far-fetched, but the concerns are real, and facts and myths from both sides are bound to crowd into the philosophical arena in the years ahead. The National Science Foundation has already sunk $2 million into research on the societal impact of nanotechnogy, and other agencies -- both in this country and abroad -- are doing the same.

The hope is that by attacking the subject early, perhaps it might be possible to assess the potential for good as well as evil in a rational, systematic way.

Wouldn't that be great, for a change?

39. Comments - 90-deg Coax Adapters

Yahoo group: Temple_ARC
Date: 2003-09-02 03:59:08 UTC
From: Charlie Schlieper
Topic: 39 Message: 39

I saw John's comments (KE5C) about 90-degree Coax adapters recently, and it reminded me of the tech article I wrote for the TARC Bulletin back in December, 2002, relating to a cheaply made 90-degree Right-Angle Coax adapter (PL-259 family) which gave problems using HIGH-POWER, and exhibited LOSS with VHF/UHF systems.

I burned one of these units OPEN, with HIGH-POWER, then hack-sawed into it to investigate. (Of course I always run MINIMUM POWER, doesn't everyone?) My particular adapter had a small METAL SPRING inside it, used to couple the two parts of the adapter at the inside corner. Not a good idea!

I am now able to identify these types as lossy and potentially faulty ADAPTERS--to avoid, but to the unsuspecting eye, they all look like good adapters.

9.3 dBd on 2m, and 13.0 on 440?

I think they speak with forked tongue....
or maybe have some pre-maturely
retired accountants from Enron on
staff.

http://www.decibelproducts.com/

I do stand corrected, the DB224E
is now rated at 6.0 dBd. Roughly
20 feet in length with 4 bays.

Looks like Decibel Products, Andrew
and Antenna Sepcialists are now
one entity.

Cellwave or CableWave Systems
is now RFS.

http://www.rfsworld.com/

These links provide gain and performance
specifications for many commercial
land mobile radio antennas.

In my humble opinion, I think the numbers
for many amateur fixed station antennas
might be exaggerated a bit when compared
with the gain acheived in the commercial
product lines. Then again, I might be
wrong.

73,

steve

Steve, the Diamond X700HNA 2meter/440 vertical I have is listed as
9.3 dB on 2 meters and 13.0 dB on 440. dB, not dBi. It's supposed to
be connected to the user ports of my BBS and node operation but that
is QRT right now and I haven't found time or money to fix what's
wrong.

Topic: 47 Message: 47

RULES

THE TEXAS QSO PARTY - 2003

Sponsored by the Northwest Amateur Radio Society (NARS) in Houston, Texas

PURPOSE:

To provide competition for Amateur Radio Operators to contact as many Texas stations in as many different Texas counties as possible. To provide county hunters the opportunity to contact rare Texas counties during the published contest time and in accordance with the rules of operation.

RULES OF OPERATION:

1.. Operation will be permissible only in accordance with current FCC rules or your country's rules.
2.. The use of spotting nets, by way of repeaters, packet nodes, simplex operation; telephone or any other means is permissible.
3.. Operation on all bands is permitted, except on 30 meters, 17 meters and 12 meters.
4.. Operation in all modes is permitted in all contest categories except for the CW Only category.
5.. Stations may be worked once per band per mode for QSO count only.
6.. Texas mobiles may be worked once per band/mode from each county for QSO count only.
7.. Texas mobiles may work stations once per band/mode from each county covered for QSO count only.
8.. NOTE: If a Texas Mobile and/or a Portable Station is on a County Line or Junction between 2 or more Texas Counties - A SEPARATE QSO AND EXCHANGE MUST BE MADE AND LOGGED FOR EACH COUNTY LISTED AS WORKED. You can't count or log a QSO that you didn't make!
9.. The Texas QSO Party is SCHEDULED ANNUALLY TO START ON THE LAST SATURDAY IN SEPTEMBER. Operating times will be from 1400Z on SATURDAY to 0200Z on SUNDAY and from 1400Z to 2000Z on SUNDAY. Stations may work the entire contest period. All logs must be submitted no later than October 31, 2003.
10.. For purposes of clarification, separate logs may be submitted for each mode.
11.. Texas mobiles can use separate logs per county.
EXCHANGES:

Non Texas stations use RS/T, State, Country, Canadian Province, or maritime region.

Texas stations use RS/T and Texas County using the TQP 4 Letter Abbreviations.

CATEGORIES:

Texas QSO Party Summary Sheets and Logs must be submitted for one (1) of these 6 contest categories. Awards for the first 4 categories will be given for both Texas and Non-Texas Stations.

1.. SO - Single Operator - (no contest power limits)
2.. MO - Multi Operators - (no contest power limits)
3.. QRP SO - QRP Single Operator - (10 watts or less phone and 5 watts or less CW and other modes)
4.. CWO SO - CW Only Single Operator - (no contest power limits)
5.. TXM SO - Texas Mobile Single Operator - single operator - may be assisted (no contest power limits)
6.. TXM MO - Texas Mobile Multi Operators - (no contest power limits)
TEXAS CLUB AGGREGATE AWARD - This award goes to the Texas club with the highest total score from the sum of all summary sheets submitted across all categories. The club name and call sign must be identified on each of the individual Texas QSO Party Summary Sheets to be included in the count.

SCORING:

Texas Stations

Count two (2) points per phone QSO with any station.

Count three (3) points per CW and other digital mode QSOs with any station.

Non - Texas Stations

Count two (2) points per phone QSO with any Texas station

Count three (3) points per CW and other digital mode QSOs with any Texas Station.

MULTIPLIERS:

Non - Texas stations

Your multiplier is the number of Texas counties worked. A maximum of two hundred fifty four (254) multipliers is allowed.

Texas Stations

Your multipliers are the number of states worked (not including Texas) plus the number of Texas counties worked plus each Canadian province worked (13 total) plus each DXCC country worked excluding USA, Canada, Alaska and Hawaii. All additional DXCC contacts worked count for points. Washington DC QSOs count as Maryland contacts.

FINAL SCORE:

Multiply the total QSO points times your multiplier to arrive at your final score.

BONUS POINTS:

Non - Texas Stations

Add five hundred (500) bonus points to your FINAL SCORE for each Texas mobile worked in five (5) different counties regardless of band or mode. If you work the same Texas mobile in five (5) additional counties, you add an additional five hundred (500) bonus points to your FINAL SCORE, etc. However, for bonus points you can only count one (1) contact per county per mobile.

Texas Stations

Add five hundred (500) bonus points to your FINAL SCORE for each Texas mobile worked in five (5) different counties regardless of band or mode. If you work the same Texas mobile in five (5) additional counties, you add an additional five hundred (500) bonus points to your FINAL SCORE, etc. However, for bonus points you can only count one (1) contact per county per mobile.

Texas Mobiles

Add one thousand (1000) points to your FINAL SCORE per every county covered with at least five different contacts. Add five hundred (500) bonus points to your FINAL SCORE for each Texas mobile worked in five (5) different counties regardless of band or mode. If you work the same Texas mobile in five (5) additional counties, you add an additional five hundred (500) bonus points to your FINAL SCORE, etc. However, for bonus points you can only count one (1) contact per county per mobile.

FINAL FINAL SCORE:

Add bonus points to your Final score.

SUGGESTED FREQUENCIES:

CW - 40 to 60 kHz up from the bottom of the band.

PHONE - 25 kHz up in General segments and 28.300 - 28.500

VHF - 50.200...144.200.

ADMINISTRATION:

The Northwest Amateur Radio Society - Houston, Texas shall appoint a QSO Party Committee whose responsibilities shall include the publication of the Texas QSO Party announcement in amateur radio magazines, journals, newsletters published by NARS and other publications deemed appropriate. The committee shall oversee the receipt of logs and has the final authority to resolve issues relating to rules of the contest and the tabulation of aggregate club scores. The Texas QSO Party shall also be responsible for the issuance of all Texas QSO Party awards.

Send logs and summary sheet via mail (paper or disk) to:
Texas QSO Party Committee

16880 East Maglitto Circle
Tomball, Texas 77377

E-mail to k5cx@... , by October 31, 2003.

Results will be posted on the TQP Website.

48. Texas QSO Party - Idea

Yahoo group: Temple_ARC
Date: 2003-09-06 13:13:45 UTC
From: Steve S. Bosshard (NU5D)
Topic: 48 Message: 48

If the W5LM Trustee, Ron W5WRE doesn't mind, and if there is some interest, I will be glad to set up a station at my shop on 25th Street and serve as control op for anyone without HF priv that would like to participate in the QSO Party.

Not too fancy but does have essentials ie, airconditioner, restroom and fridge - BlueBonnet Cafe is within walking dx.

From: Charlie Schlieper
Topic: 53 Message: 53

Hello All,

There has been a recent change in the 145.555/445.555
Experimental Cross-Band LINK. We were experiencing some
limited amount of UHF INTERMOD during the day that would
key up the system. To counteract this problem, a SUB-TONE
of 71.9 Hertz was programmed into both sides.

So be sure to program 71.9 Hz subtone into your rigs
for 145.555 and 445.555 MHz.

73,
Charlie, N5TD

Good Moring,
I was reading up on this issue about the broadband over powerlines.
From my understanding this may effect up to 80 mhz in the spectrum to also include our 6 meter band.
I also read that the TV industry is now jumping onto the band wagon because the lower portion of the tv band could be effected.
Here is one more I also heard that the military is possibly getting involved especially since the US airforce global hf system,The army ,navy nad coast guard has allocations in the hf plus other government agencies as well may be effected plus the SINGARS system works from 30 to 76 mhz.
I think that the government involvment may end up killing this issure quickly.

Hello All,

Just a heads up---the very concerning topic of BPL,
or BROADBAND OVER POWER LINES, is the next program
for the October 2, 2003 meeting of the Temple Amateur Radio
Club.

If you want to become better informed about BPL, and
it's potential effects on Amateur Radio, be sure to attend this
meeting.

Topic: 60 Message: 60

Austin SwapNet 09/07/2003 de N5MNW, ARO and AARC. Website:
www.AustinHams.org

Signal Wizards,
Congrats to the HLARC for putting on a quality Swapmeet in Marble Falls
this past
weekend. Lori and I deployed 5 tables and had a great time chatting and
exchanging
goodies. We will make every effort to make next years' event.

My desktop has been repaired, re-imaged and converted to Windoze XP.
Sorry for the
lapse, I hope to get back in the swing this week. Real Work (tm) has also
taken its toll on
quality Ham Radio time!

The '95 Escort has been replaced by a grayish-blue '99 Escort. I spent
some time
Sunday putting the 40-amp wiring harness in and installing the first rig, a
dual-bander.
Next will be the APRS beacon and in the next few weeks, the '706.

Next ARES General Meeting, instead of the normal 5th Tue meeting in
September we
will move this meeting to the FOURTH week in October so it will be held
AFTER the SET
and before the Holiday hiatus.
Lee W5LHC

NOTE!-- ARO moves to Marimont in October. (September meetings still at
ARL.)
Here is a summary of the schedule as I know it:

September:
2 ARO at ARL 10,000 Burnet- 802.11 technology and making it work for you
9 AARC at ARL 10,000 Burnet- Soldering PL259's and jumpers

October:
7 ARO at Marimont 38th/Guadalupe
14 AARC at ARL 10,000 Burnet
28 TCARES 5th Tue at ARL 10,000 Burnet

November:
4 ARO at Marimont 38th/Guadalupe
11 AARC at ARL 10,000 Burnet

December:
2 ARO at Marimont 38th/Guadalupe
9 AARC Christmas Party at Fiesta Gardens Clubhouse- 2101 Bergman Ave

Mark your Swapfest calendars for Nov 15th. The "Austin Radio RoundUp"
swapmeet
will commence on Saturday from 8AM-1PM at St Louis Catholic Church 7601
Burnet Rd.
The indoor hall will accommodate about 70 tables and there is room for
tailgating outside.
We will have snail-mail signup and plan for web registration. Commercial
vendor setup
on Friday night, a banquet with musical entertainment and a special Guest
Speaker.
For web information, see www.austinhams.org/swapfest.html
For more info, contact Jeff N5MNW@... or Lori KM5MQ@...
512-255-6753

If you're not an ARRL member and are considering it, AARC/ARO will apply
$15 towards your 2003 AARC/ARO club dues if you sign up for first-time
ARRL membership through the club! Take advantage of 2003 ARRL signup,
join ARRL and AARC/ARO simultaneously!
Contact John KG5O@... or Roger W5WIA@... for more details.

Jon, WA6KLB has around 20, GE Phoenix SX, 16 channel, VHF, Scan and Priority Scan radios for sale. These are 45 Watt, Business band radios that use a fixture for programming. I just received 10 of these units, and they are all in working condition. They need a loudspeaker, microphone and power cable alone with 12 VDC and an antenna for operation.

I would like to order another 10 of these if there is interest.

Cost is $35 per radio plus shipping. Estimate $5 per radio Shipping charges.

Let me know,

Steve

These are "suggested" MT-63 frequencies. Please be aware of your band surroundings before using any of these to transmit MT-63.

3610 kHz
7110 kHz
10.140 MHz
14.1095 MHz
18.100 MHz
21.130 MHz
24.908 MHz
28.130 MHz
50.290 MHz

Most ops use USB orientation for ALL bands, when using Digital/Teleprinter modes.
The MT63 Reflector is MT63@egroups.com. (MT63-subscribe@onelist.com)

Please help put Bell County on the air as much as possible during the Texas QSP Party the last weekend this month (Sat/Sun Sept 27/28): 9 am to 9 pm local on Saturday and 9 am to 3 pm on Sunday.

SUGGESTED FREQUENCIES:

CW ☐ 40 to 60 kHz up from the bottom of the band.

PHONE - 25 kHz up in General segments and 28.300 - 28.500

VHF - 50.200 ..144.200.

The exchange you send will be RS/T and county (presumably Bell). Other Texas stations will send you the same, and non-Texas stations will send RS/T, State, Country, Canadian Province, or maritime region.

Since this is our home state, I would encourage you to call CQ - "CQ TEXAS QSO PARTY FROM ... IN BELL COUNTY" or on CW "CQ TQP BELL DE ...". It's good to mention that you are in Bell Country when calling.

I will be operating about 3 hours each from stations in Blanco, Llano, and Mills counties, as a portable from Comanche county, and as a mobile driving in-between, so I won't be on from Bell, but work me if you hear me. I'll post my route and callsigns later.

http://www.txqp.org/

73, John, KE5C

66. A More Common Broadband over Power Line...

Yahoo group: Temple_ARC
Date: 2003-09-13 01:23:01 UTC
From: Steve S. Bosshard (NU5D)
Topic: 66 Message: 66

This piece comes right after a story about Amateur Radio becoming the primary means of contact between Bermuda and the rest of the world in the aftermath of Hurricane Fabian.

These people can't track or fix the noise radiating from basic power line systems, and we want to let them compound it by putting BPL carriers on them?

M

From today's ARRL Letter-

* +FCC asks utility to try harder to fix power line noise

==>FCC ASKS POWER COMPANY TO TRY HARDER TO RESOLVE NOISE COMPLAINTS

The FCC has asked American Electric Power Company of Columbus, Ohio, to take a closer look at several power line noise complaints and try harder to resolve them. The cases involve complaints from four Amateur Radio operators in Ohio, Indiana and Oklahoma.

"While we certainly appreciate the considerable effort that AEP afforded this matter, we are puzzled by the lack of results," FCC Special Counsel Riley Hollingsworth wrote August 26 in a letter to AEP Senior Vice President Marsha P. Ryan. "In most cases, a noise source can be located easily by trained personnel using the proper equipment."

AEP responded February 10 to the FCC's initial correspondence regarding the four cases. Hollingsworth says, however, that follow-up reports from the complainants suggest discrepancies exist between what AEP told the FCC and what the complainants report. Hollingsworth said evidence to date indicates that none of the cases has been satisfactorily resolved.

In one case, AEP erroneously identified the amateur's own antenna as the source of the noise.

Jerry Daugherty, W9FS, of Indiana told the FCC that he's heard nothing from AEP and was not even aware that the utility was considering his case closed. "As of June 20, 2003, the noise was present at VHF and coming from several different locations," Hollingsworth said, citing information from Daugherty.

James Kiskis, W8PA, of Ohio reported to the Commission that, although interference identified as coming from two utility poles was fixed, it has since returned from one of them. Kiskis told Hollingsworth that an AEP interference investigator showed up at his residence June 23 and--using a spectrum analyzer hooked up to Kiskis' antenna--found strong noise on 20 and 10 meters. The investigator reportedly told

Kiskis that he was turning his findings over to a line crew to have the problems repaired.

William Hannon, N8PW, of Ohio confirmed to the FCC that AEP had repaired several suspect utility poles, "including one very significant noise source," Hollingsworth said. But, he added in his letter to Ryan, Hannon "continues to experience strong noise in dry weather conditions when his antenna is pointed east."

Howard McCloud, KC5RGC, of Oklahoma reported power line noise last April and identified its source for AEP as utility lines about a mile from his station. McCloud was not aware that AEP had attempted to correct it, Hollingsworth wrote. "AEP now apparently maintains that the source of the noise is McCloud's antenna, even when it is disconnected and on the ground," a conclusion Hollingsworth labeled "patently defective." McCloud reports relatively strong noise on HF that continues 24/7.

Hollingsworth asked AEP to "revisit each of these cases" and to update the FCC within 45 days of any progress in each case. He also referred the power company to ARRL RFI Specialist Mike Gruber, W1MG, for technical assistance in resolving the cases.

Subject: RE: [PWF] BPL

Guys - I agree with you! But!!!!! Please keep your minds open. I'm the narrow-minded one on this subject? Read on, from Ed Hare (of the ARRL):

Measurements were made of the field strength present at several of the test locations. At test site #1, the user had linked his home computer to a streaming video site to provide a constant signal during testing at that location. On 12 MHz, the BPL-noise field strength at this location was measured as high as 23.0 dBuV/m with the short-dipole antenna located approximately 5 meters below the overhead power lines, with the mobile installation parked on the street. Another measurement was made on 5.3 MHz, using a 7-MHz half-wave dipole, matched to 5.3 MHz using an antenna-matching network. This antenna was located a height of approximately 6 meters, 3 meters in front of the house, approximately 12 meters from the street. This would be a reasonable amateur installation for that neighborhood of close-spaced houses. The level on 5.3 MHz at that antenna was 6.6 dBuV/m[4]. The measured ambient noise level when BPL signals could not be detected averaged around -6 dBuV/m on 5.3 MHz to -3 dBuV/m on 14 MHz.

At test site #3, measurements made from the street, across the street from the lines, ranged from +28 dBuV/m at one location measured from the vehicle parked across the street from overhead power lines to +35 dBuV/m at another where the antenna was raised to a height of about 5 meters above ground. In test site #4, ARRL measured +32 dBuV/m at one location about 10 meters diagonally from the power lines, with the test antenna located at a height of about 3 meters[5].

Now - here's some questions I have - why weren't the tests run at 3.999 MHz or 7.001, in the ham band? Why was 5.3 MHz used? One test was done 15 feet from the power line, and another was 40 feet. What happens at 100 feet? 150 feet? 200 feet? The argument that 40 feet is a good judge of distance is interesting, since the antenna at 7 MHz (assuming a dipole, as used in the test) will be about 66 feet long all by itself. This gets back to OET-65 and radiation issues, too. My 75 meter antenna at 124 feet long was 150 feet from a power line parallel, and 80 feet perpendicular (I was on a corner lot), and the power entrance was on the other side of the ranch house, 80 feet from the near tip. What I'm getting at is that these tests were done in worst-case situations, and were done in such a way as to especially expose the problem, not to clarify the issue.

To compare, when my NorthStar engine was eating 6 quarts of oil in 1,000 miles, I was asked to drive it in 500-mile increments and let the Cadillac folks monitor the level. Sure, they ripped the engine down at long last and replaced the rings (and a few other things that were busted), but I endured the 2,500 miles to verify the problem. I see the ARRL test as being close to the first stop at the dealership. We need more data.

I am especially interested in the Manassas test they ran, see below.

Test Area #2 -- City of Manassas, VA

ARRL made only one visit to this trial area, so only limited testing was performed. In this area of underground wiring, the interference level was moderately strong. A single example of this is shown in the video documentation.

This system is underground, and pops up into shielded utility boxes where they inject the signal using inductive coupling. How is it leaking to the surface? Is the interference coming from the power entrances or leaking from underground? How high above the ground and how far away horizontally do you have to be before the signal attenuates significantly? Since most HF antennas are mounted 20-60 feet above the ground for optimum performance, these questions are valid. No answers yet!

On to Mark's point, which the ARRL understands, but states:

[3] To ARRL's knowledge, neither ARRL nor any of the BPL manufacturers have made testing at heights above the power lines to determine the true points of maximum emissions from the lines. These would have significant applicability to the impact of the radiated emissions on aeronautical communications, areas located above the lines on hilly terrain or to antennas located on towers that are taller than the lines.

I think MORE TESTS are needed. Perhaps airborne communications are potentially the most significant to be affected. In that case, folks like ARINC and the Air Force need to test immediately, and then report their findings to the Commission and the public. Has anyone run such tests?

Guys and gals, as I started to say, I agree with you - this technology has some potentially bad interference issues to contend with. Yet where are the tests to show these statements are valid? As a ham who only operates HF mobile and who would be directly affected, I'd like to see them!

I suggest that someone hire an independent consulting professional engineer with telecom and power engineering backgrounds to investigate the issue conclusively. Contact me off line if you need to find such a firm, I have several suggestions of good firms who can do the work from various places across the country.

In all of my professional experience, the question has to be why - why - why. All I hear is fire - fire - fire, and no one is getting past the first whiff of smoke.

Todd Ellis

Subject: Re: [PWF] BPL

Thanks Neil... This is great stuff.

The ARRL has been doing some structured testing: A very interesting article, and links to other papers at:

http://www.arrl.org/news/stories/2003/08/21/4/?nc=1

The test vehicle looks a bit like a rolling-hamshack.

ARRL also produced a downloadable movie, w/sound, from one of their neighborhood interference hunts.

Subject: [PWF] BPL

Thinking back to "Waves and Fields", I think the interest in BPL is being generated because it is the type of technology that is "easy to do". The problems with BPL stem to the fact that it is "hard to do right"!

e.g.

A transmission line can carry a wide range of frequencies without issue, explains the BPL engineer.

There is only one way to keep a transmission line (any transmission line) from radiating. That is you MUST terminate both ends at the characteristic impedance of the line, at the frequency of interest.
(No problem, says the BPL engineer)

Oh wait, we are talking about a wideband signal; so now we have to match the impedance across the entire band.
(Small problem says the BPL engineer)

Oh, I forgot it is not a single line, but a muti-node network.
(Should not be an unsolvable problem, says the BPL engineer)

But the network is not stable, and terminations at both the generation and load side change without warning.
(Think I can solve that, says the BPL engineer)

AND, the system has nonlinear elements so we must do all this matching for some number of harmonics of our main frequency band.
(I did not even think of that, says the BPL engineer)

Now consider that there are other high power frequencies on the network that will mix in the nonlinear elements, with the potential to create new products that were not considered in the original design.
(Oh My God, says the BPL engineer)

Just for laughs we are going to apply this to a legacy network that was never designed for anything except 60Hz, and does not carry that

well in a low noise manner.
(I quit! says the BPL engineer)

Pardon any inaccuracies the class was over 20 years ago.

69. The TARC Repeaters

Yahoo group: Temple_ARC
Date: 2003-09-13 20:37:31 UTC
From: Charlie Schlieper
Topic: 69 Message: 69

Here is a recent picture showing the TARC 146.82 and 444.700 repeaters which are located at Scott and White hospital. The front is removed on the right most rack. It houses the backup machine for 146.82 and the 444.700 UHF repeater.

72. Suggested PSK-31 Frequencies

Yahoo group: Temple_ARC
Date: 2003-09-15 01:12:41 UTC
From: Charlie Schlieper
Topic: 72 Message: 72

----- PSK-31 Mode
Here is a list of "suggested" PSK-31 frequencies:

1838.15 kHz
3580.15 kHz
7070.15 kHz
10.13715/10.140 kHz
14.07015 MHz
18.10015 MHz
21.08015 MHz
24.92015/24.9250 MHz
28.12015 MHz
50.290/50.350/50.375/50.615 MHz
144.144 MHz
222.070 MHz
432.200 MHz (and up)
909.000 MHz (and up)
1296.200 MHz (NOT ALLOWED in Bell County, Tx to protect the FAA Radar
site in Rogers, operating on 1295 MHz with a 6-MHz bandwidth)

Note 1) 14.07015 MHz (20m) is the main PSK activity at present
Note 2) PSK63 can usually be found slightly above the PSK31 frequencies
Note 3) 10.140 seems more popular than 10.13715 MHz for 30m
Note 4) 50.290 MHz is the main 6m frequency

that's cool! here's another interesting weather radar site:

http://weather.noaa.gov/radar/mosaic.loop/DS.p19r0/ar.us.conus.shtml

you can then select a state radar to zoom in to a particular area.
the one hour loops are neat to see what the storms are doing.

80. Fw: [Repeater-Builder] Narrowband?

Yahoo group: Temple_ARC
Date: 2003-09-18 02:27:27 UTC
From: Steve S. Bosshard (NU5D)
Topic: 80 Message: 80

----- Original Message -----
From: "nj902" <wb0emu@...>
To: <Repeater-Builder@yahoogroups.com>
Sent: Wednesday, September 17, 2003 4:42 PM
Subject: [Repeater-Builder] Narrowband?

| Is anyone experimenting with a narrowband repeater? Narrowband in
| the context of +/-2.5 kHz deviation. The idea raises several
| interesting questions.
|
| Why experiment with narrowband?
|
| 1. The FCC has released its order mandating narrowband for commercial
| and public safety operations below 512 mHz. Amateurs are not
| directly affected but it may be advantageous to for hams to
| demonstrate a willingness to embrace new technology.
|
| 2. IARU region 1 is transitioning to 12.5 kHz channel spacing For FM
| repeater and simplex operation in the 144 to 146MHz band.
|
| 3. Narrowband could make it possible to implement more systems in
| areas where existing bandplans are fully allocated.
|
| 4. If amateurs loose any VHF/UHF spectrum to commercial interests, it
| may be necessary to make better use of what remains.
|
|
| Is equipment available?
|
| 1. Commercial equipment has been available with narrowband ability
| for some time. This equipment could be used by amateurs.
|
| 2. Amateur equipment is also available with narrowband capability,
| for example the IC-V8000 2 meter transceiver and the IC-208H dual
| band transceiver are available from Icom.
|
|
| What would we attempt to learn?
|
| 1. What impact does narrowband have on system range?
|
| 2. What impact does narrowband have on audio quality?
|
| 3. Is companding desirable in an amateur repeater system?
|

| 4. How does narrowband affect spectrum utilization - bandplanning and
| coordination? In other words, how far apart should a narrowband
| system be from another narrowband system on an adjacent channel and
| how far away should a narrowband system be from a wideband system on
| an adjacent channel?
|
|
|

HAZARDOUS WEATHER OUTLOOK

NATIONAL WEATHER SERVICE FORT WORTH TX

345 PM CDT THU SEP 18 2003

THIS HAZARDOUS WEATHER OUTLOOK IS FOR NORTH TEXAS.

.DAY ONE...

A COLD FRONT WILL CONTINUE MOVING SOUTHEAST ACROSS NORTH TEXAS THIS

EVENING. SCATTERED THUNDERSTORMS WILL CONTINUE TO DEVELOP IN THE

UNSTABLE AND VERY MOIST AIRMASS AHEAD OF THE FRONT. ORGANIZED SEVERE

WEATHER IS NOT EXPECTED...BUT LOCALLY HEAVY RAINS...FREQUENT

LIGHTNING...AND GUSTY WINDS WILL ACCOMPANY SLOW MOVING THUNDERSTORMS

THIS EVENING. THUNDERSTORM CHANCES WILL DIMINISH FROM NORTH TO SOUTH

OVERNIGHT AS DRIER AND MORE STABLE AIR MOVES SOUTH FROM OKLAHOMA.

.DAYS TWO THROUGH SEVEN...

ANOTHER COLD FRONT WILL MOVE INTO NORTH TEXAS THIS WEEKEND...WITH

SCATTERED THUNDERSTORMS FORECAST FROM SUNDAY MORNING INTO MONDAY

MORNING.

.SPOTTER CALL TO ACTION STATEMENT...

SPOTTERS MAY WANT TO MONITOR THE LATEST CONDITIONS WITH RESPECT TO

LOCALIZED FLOODING THROUGH THIS EVENING. OTHERWISE...SPOTTER

ACTIVATION IS NOT ANTICIPATED THROUGH TONIGHT.

New E-Mail Worm
Targets Hole in Internet Explorer

SAN FRANCISCO (Reuters)
September 18, 2003

Anti-virus companies warned on Thursday of a new computer worm circulating
through e-mail that purports to be security
software from Microsoft Corp. but actually tries to disable security
programs that are already running.

The worm, dubbed "Swen" or "Gibe," takes advantage of a two-year-old hole in
Internet Explorer and affects systems that have not installed a patch for
that security hole, according to Internet security company Network
Associates Inc..

The malicious program arrives as an attachment to an e-mail pretending to
contain a patch for holes in Internet Explorer, Outlook and Outlook Express
and then mails itself off to addresses located on the victim's computer.

The worm also can spread over Internet relay chat and the KaZaa peer-to-peer network, as well as copy itself over shared networks, Network Associates said.

When it infects a computer it alerts a Web site that appears to be counting the infections, according to Symantec Corp., another Internet security outfit. The number of the counter was near 760,000 by Thursday afternoon.

Network Associates rated the worm a low risk for corporate users and a medium risk for home users. The company and rival Symantec, among others, were offering anti-virus updates that detects and removes the worm.

Microsoft has cautioned customers in the past against e-mail software updates, saying it does not distribute patches that way but rather directs them to its Web site.

help keep bell county on the air during the texas qso party!

http://www.txqp.org/

next weekend:
sat sept 27 9am - 9pm local;
sun sept 28 9am - 3pm local

exchange;
you send rs/t and bell;
they send rs/t and texas county, state, country, canadian province,
or maritime region (you do work texas stations)

suggested frequencies:
cw ☐ 40 to 60 kHz up from the bottom of the band;
ssb- 25 kHz up in general segments and 28.300 - 28.500;
vhf - 50.200 ..144.200

make folks welcome by calling cq - indicate you are in bell county:
cw - "cq tqp bell de ...";
ssb - "cq texas qso party this is ... in bell county"

work me if you hear me - i'll be moving around west central texas and
i will be operating from three fixed stations using their callsigns
(so i can be worked in each county) - k5tr (blan/blanco), w5kft
(llan/llano) and ab5ty (mila/milam). i'll also be on as ke5c/m while
mobile in several counties and ke5c/p while in coma/comanche county.

From: Glenn Blum
Topic: 88 Message: 88

Steve,
Looks pretty interesting even for simplex.
Simplex would make it more interesting since it would be point to point.
My question is the availability of equiptment at a decent price.
I havent looked at my equiptment if I was able to change the bandwidth.
Plus the availability of used comertial equiptment for experimenting.

To start would it be feasable to set aside a simplex frequency?

Subject: Re: [Repeater-Builder] Re: Narrowband?

| Hi
|
| A note regarding what has been used here in South
| Africa.
|
| By going 12.5 the adjacent channel rejection is
| degraded by an average of 10 Dbs.
| On the amateur side what we have started doing is to
| reduce the deviation from 5,5 max on the repeaters to
| 3,5 khs with little or no dominant side effects from
| the users.
| Secondly you can still run up to 4 khz max dev and use
| 12,5 khz channel spacing- your repeater co-ordinators
| would still have to do their homework as you would now
| have twice the frequency allocations and distance
| between the repeater outputs.
| Note that here in South Africa many of the amateurs
| use commercial rigs which of some are 12,5khz thus
| this is in there best interest.
| At the moment the majority of the ham gear is 25 RX so
| the migration for max benefit on 12,5 allocation will
| be somewhat in the future.
| As mentioned once 12,5 is implimented use of more
| advanced audio processing may be neccessary to assist.
| There are techniques such as AGC and more to
| assist-slow agc we have used in commercial repeaters
| makes ?ll stations sound on-par and commonly used on
| TAIT t800 repeaters.
|
| Good luck
|

Ms. Elizabeth I. Olsen
4170 Atlantic Avenue
Farmingdale, NJ 07727

RE: Amateur Radio license N2CTD--Repeater Operation
Case Number 2003-603

Dear Ms. Olsen:

By letter dated July 7, 2003, we informed you of a complaint that a repeater identifying with your call sign operating on 146.775 MHz often fails to identify, drifts and often generates noise and locks into the transmit mode. Information in the complaint also indicated that it was no longer coordinated. We requested that you respond in detail to the complaint, pursuant to Section 308(b) of the Communications Act of 1934, as amended, 47 U.S.C. Section 308(b), within 20 days.

We have reviewed the information provided in your response, as well as information provided by the area coordinator, MetroCor. We note that you have replaced repeater equipment, corrected deficient operation of the repeater, properly applied for coordination; and that coordination will be issued when the matter is closed by the Commission.

In view of the above, we are closing this matter. You are reminded that the decision to
operate your station as a repeater is a totally voluntary one. Repeaters are a convenience, not a necessity. A repeater is a station, just like any other station, under Section 97.205 of the Commission's rules; and all stations must have a licensee and a control operator capable of ensuring the IMMEDIATE proper operation of a station regardless of the type of control.

Thank you for your cooperation in this matter.

Sincerely,

W. Riley Hollingsworth
Special Counsel Enforcement Bureau

CC: FCC Northeastern Regional Director

CERTIFIED MAIL-RETURN RECEIPT REQUESTED

Kelly G. Jones
705 State Hwy KK
Fordland, MO 65652

Subject: Technician Class Amateur License K0EMD
WARNING NOTICE

Dear Licensee:

Information before the Commission indicates that on July 20, 2003, at 0235 UTC, you operated on 18.128 MHz, the 17 Meter Amateur Band. That frequency is not allocated to Technician Class operators.

Such operation reflects adversely on your qualifications to retain an Amateur Radio license. Section 308(b) of the Communications Act of 1934, as amended, gives the Commission the authority to obtain information from licensees about the operation of their station. Accordingly, you are requested to respond to this letter within 20 days of its date submitting any information you wish to be considered in regard to the above operation. Address your response to 1270 Fairfield Road at the letterhead address.

The information you submit will be used to determine what action to take in this matter. Please be advised that Congress has made punishable a willfully false or misleading reply to a letter of this type.

Additionally, please be advised that such operation my lead to revocation of your license or a monetary forfeiture, and no upgrade application will be considered until this matter is resolved. Please call me at 717-338-2502 if you wish to discuss this matter.

Sincerely,

W. Riley Hollingsworth
Special Counsel

CERTIFIED MAIL--RETURN RECEIPT REQUESTED

Mr. Martin Gross
124 11th Street
Lakewood, NJ 08701

RE: Amateur Radio license N2DCG--Repeater Operation
Case Number 2003-626

Dear Mr. Gross:

Enclosed is a complaint that a repeater identifying with your call sign is operating on 448.825/443.825 MHz and is used as an adjunct to WNVF 627, a

business radio system for the Hatzolah Emergency Medical Services, rather than for Amateur Radio purposes as set forth in Section 97.1 of the Commission's rules. Information further indicates that the repeater is not coordinated.

Section 308(b) of the Communications Act of 1934, as amended, 47 U.S.C. Section 308(b), gives the Commission the authority to request information from a licensee regarding the operation of a radio station. Accordingly, you are requested to respond in detail to the matters raised in the complaint within 20 days from the above date.

In an inquiry of this type we are required to advise you that Congress has made punishable a willfully false or misleading reply, and that the information you submit will be used to determine what, if any, action to take in this matter. See Title 18, Section 1001 of the United States Code. Address your response to 1270 Fairfield Road at the above letterhead address.

Sincerely,

W. Riley Hollingsworth
Special Counsel Enforcement Bureau

RE: Warning Notice: Amateur Radio license KC7LJR
Case #EB-2003-622

Dear Mr. Smith:

Information before the Commission indicates that you have deliberately interfered with the W7RAZ repeater system on 146.840 MHz on numerous occasions, and ignored a written request from the control operator of that repeater that you not use it. Enclosed are copies of complaints that relate to those incidents.

Continued interference to the W7RAZ repeater, or to any other Amateur repeater, or any other Amateur communications, will subject you to revocation and suspension proceedings, as well as a monetary forfeiture. Fines normally range from $7,500 to $10,000. Additionally, you will not be allowed to upgrade your license until this matter is resolved.

We note that there is an address discrepancy in our database associated with KC7LJR, which still shows your address as 520 SW 24 St Apt 28, Ontario, OR 97914. We request that you correct your records as necessary on our database within 20 days.

Section 308(b) of the Communications Act of 1934, as amended, 47 U.S.C. Section 308(b), give the Commission the authority to obtain information from applicants and licensees regarding the operation of their station. Accordingly, you are requested to respond to the enclosed complaints within 20 days from the above date.

Please call me at 717-338-2502 if you have any questions about this matter.

Sincerely,

W. Riley Hollingsworth

109. Texas QSO Party experience

Yahoo group: Temple_ARC
Date: 2003-09-29 19:25:04 UTC
From: John, ke5c
Topic: 109 Message: 109

The Texas QSO Party is the kind of contest where the goal is to have a great time and make some contacts. It's more of a social event than a contest, but more of a contest than Field Day which isn't really a contest at all even though some folks think of it as such. I wasn't too worried about Bell county being represented since NU5D was going to be on, and several mobiles were driving through Bell on I35, so I focused on the near western counties, especially those where I had friends. Next year I might do the entire TQP mobile CW, but this year I decided to mix mobile with some socializing by guest operating three to four hours at K5TR in Blanco County near Johnson City, W5KFT's ranch station on the northwest corner of Lake Buchanan in Llano County, and at the Queen Bee's, AB5TY, just south of Goldthwaite in Mills County.

http://www.kkn.net/~k5tr/
http://www.kkn.net/~w5kft/
http://www.qsl.net/ab5ty/

I had planned a few hour portable operation at some non-hams friends in Comanche County, but I ran out of time before I finished a portable antenna I was putting together. Although I started Saturday after only two hours sleep due to last minute glitches in preparations, I still made it through my planned cycle of operations, and I gave out a total of 657 CW contacts after removing duplicates.

On Saturday, I opened at K5TR's operating roughly 3.5 hours there making 151 contacts. I drove about 65 miles to W5KFT's station operating mobile while doing so in Blanco, Burnet, and Llano counties. I spent about 2:45 at W5KFT's and made another 120 contacts. My wife Emily (companion and driver) and I then interrupted our 85 mile trip to AB5TY's station in Goldthwaite with a leisurely stop for BBQ at Cooper's in Llano. I again operated mobile in Llano, then San Saba and finally Mills Counties. That left about one hour on Saturday to operate AB5TY's station before the first day ended. We were treated to Macalee's hospitality that night, and I sure slept well.

On Sunday, I operated another 2:45 or so at AB5TY, then we headed to Comanche operating some mobile in Mills on the way. In Comanche I had planned a true portable operation, but since I had run out of time getting my portable antenna finished, I just sat in the car there for about an hour more after having a nice lunch and watching the Cowboys for a while on TV - as I said, this was a relaxed contest.

Totals guest operator QSO's - all CW - 444
@ K5TR- 151
@ W5KFT - 120
@ AB5TY - 173

Total mobile QSO's - all CW - 213

110. Re: [Temple_ARC] Texas QSO Party experience

Yahoo group: Temple_ARC
Date: 2003-09-29 21:45:37 UTC
From: km5ew_2
Topic: 109 Message: 110

Bell County was represented not only by NU5D but by KM5EW as well. Unofficial figures are as follows for KM5EW (all SSB, single-op only):

Total QSOs: 431
Total Texas Counties Worked: 128
Total States Worked (not counting TX): 39
Total DX Countries Worked (not including W, VE, KH6, KL7): 7
Total Multipliers: 174
Bonus Points (for working TX mobiles): 4500
Unofficial Final Final Score: 154,448

Definite Top-10 score; possible Top-5 (based on 2002, no guarantee for 2003).

I did not operate for about 3 1/2 hours total for various reasons like visiting XYL's family.

Goal for 2004: 200,000 points (definitely reachable).

It may be a social event to some, but some like to operate to win! All the same, everyone had fun!!!

Warren Rowe / KM5EW

128. The Fine Print

Yahoo group: Temple_ARC
Date: 2003-10-08 01:25:12 UTC
From: John, ke5c
Topic: 128 Message: 128

My old Hygain Explorer-14 tribander is rated for the "legal limit". I finally joined the QRO club a few weeks ago when I purchased a used Ten-Tec Centurion. With a pair of 3-500ZG's, I measure about 1250 Watts on a Bird into an FAA surplus dummy load.

The BN-86 balun that came with the Explorer-14 is rated "1500W PEP at less than 2:1 VSWR; 500 W PEP at less than 3:1 VSWR". During the California QSO Party I moved from 14050 (VSWR < 2:1) up to meet a schedule at 14329 (VSWR 3:1). I decided, heck, I'll just run wide open up here, so I tuned up for full output. Things didn't go well.

Back down on 14050 after some checking, I could run up to about 400 W and the VSWR was 1.5:1. Above 400 W both forward and reverse power flucuated wildly. The Explorer-14 trouble shooting section lists "Low power, low VSWR; high power, high VSWR" as an indication the balun may be damaged. Tonite after work I removed the balun and cut it open with a Dremel tool:

http://www.kkn.net/~ke5c/images/bn_86_1.jpg

http://www.kkn.net/~ke5c/images/bn_86_2.jpg

Rather than replace this balun, I am either going to use a choke coil:

http://www.bcdxc.org/ve7avv_th6_balun.htm

or a bead balun per the recipe forwarded by K5TR to me:

>
> FB-43-1020 from Amidon 1.0" dia, 1.12" long, 0.50" hole
>
> Don't use the 77 version--it looks better on paper (higher mu)
> but gets hot. 8 beads will get you from 10-60 MHz. And probably
> OK to 7 MHz--but I would use 10 or 12 on 7 MHz to be safe
> and probably 15 or so to be sure on 80M. Haven't run any tests

From: john, ke5c
Topic: 129 Message: 129

nu5d says:

| 1990 Khz - Dentron MLA2500 - Times LMR400 transmission line - 70 ft
AGL -
at
| least 15 ft above metal roof on the E leg, and 25 ft agl on the W leg.
| Performs well - Corona burned insulator - tried 16" X 1/2" delrin
plastic
| rod - Corona melted end of insulator. Using glass insulator now - AOK.

http://www.bosshardradio.com/images/corona.jpg (35 kb)

alpha delta replies:

| Thanks for the report on the insulators. We appreciate it. I have
noticed
the effect in a few cases with high power (it doesn't seem to happen at a
200-300 watt power level) and certain levels of humidity. We don't have
much
humidy at the antenna test site here in Arizona, so I rely on customer
input
such as yours.
|
| Actually, your set up is more "normal" because Arizona is not typical
of
most U.S. weather. Having been originally from Illinois, I should have
thought of that. However, thanks for the input. We'll have our guys look
into the use of glass type insulators.

From: Kay Schlieper
Topic: 130 Message: 130

For those who may not be aware of it . . .

Garrett Hill, N5MPE, was admitted to the VA Hospital here in Temple last Sunday with pneumonia. He got up and tripped over his IV tubes that night and fell and broke his hip. He was in no condition at that time for surgery, so the hip repair has had to wait until they could get his pneumonia under control.

I just talked with his wife, Mic, and she tells me they will be doing the surgery on his hip in the morning. She said he was going to need some pins and a plate put in.

Needless to say this is a tough time for them both. She asked that we add them to our pray list. So please, let's all say a pray for his recovery.

Kay

I sure that I speak for Jerry (KA5AIE) and myself in thanking Steve for giving us a voting machine in SE Bell Co. near Rogers. I can now talk on the 82 machine with my HT from my home. Atfer Barbara runs me outside while she uses the computer and ties up my radio listening, I can now on the front porch and listen and talk. Jerry used it from downtown Cameron today with an HT using an outside mag mount with grat success. From now on the coffee is on Jerry since he won the grand price at the expo and can richly afford it.

;

FROM THE ARRL NEWS LETTER

==>73 MAGAZINE SAYS "73 AND QRT"

After completing 43 years of publication, 73 Amateur Radio Today magazine is calling it quits. Plans to publish a joint October/November issue fell through this week, and the September 2003 issue was the magazine's last. According to self-proclaimed "El Supremo and Founder" Wayne S. Green II, W2NSD, it was a simple matter of economics.

"After failing a last minute effort to collect on some larger accounts receivable we decided yesterday to throw in the towel--that the September issue will have to be the last," Green told ARRL October 9. "SK after 43 years of publishing."

The first issue of 73 was published in October 1960 from what Green--a former editor of CQ--once described as "a small, dingy apartment" in Brooklyn, New York. Since the summer of 1962, 73 has been based in Peterborough, New Hampshire--Green's home state. The magazine was a pioneer promoter of SSB, FM, solid-state, easy construction projects and the marriage of personal computing and Amateur Radio. His interest in microcomputing led Green in 1975 to found Byte, a magazine devoted to the then-nascent and largely do-it-yourself computer hobby.

At the peak of its popularity in the 1970s and 1980s, individual issues of 73 totaled more than 300 pages of ads, articles and commentary. Heading each issue was Green's inimitable "Never Say Die"--some would say never-ending--editorial, in which he rarely missed an opportunity to tweak the ARRL and his magazine competitors for their perceived shortcomings.

QST Editor Steve Ford, WB8IMY, says 73 published his first article in the 1970s. "I was saddened to hear that 73 has ceased publishing," Ford said. "Wayne's excitement about the growing amateur FM repeater phenomenon at the time was infectious."

Green's 73 editorials and regular round of personal appearances originally concentrated on Amateur Radio and his ideas to improve, advance and grow

it. In recent years, however, they've veered into conspiracy theories, cures for cancer, AIDS and other ailments and Green's proliferation of book titles on those topics.

Green says he'll continue his essays on his Web site <http://www.waynegreen.com> "for those subscribers who mainly bought the magazine for them." He told ARRL that no definite arrangements have been made yet about how to handle outstanding 73 subscriptions.

CQ Publisher Dick Ross, K2MGA, said he takes no joy from the passing of 73. "The loss of any publication serving Amateur Radio leaves all of us a bit poorer," he said. "Thank you, Wayne, for 43 entertaining, informative, sometimes infuriating, and always interesting years of 73. We'll genuinely miss it."

Update on Garrett Hill, N5MPE --

Garrett did have surgery Friday morning to repair his broken hip. They had to put in a couple a pins and a plate. Garrett said the operation went well.

Charlie & I went by this morning to check on him. We only got to see him for a minute before we had to leave so he could be given some physical therapy. He is in the VA Hospital, Room #24, Bed 2, on 3K (3rd floor, K wing). The phone# to his room is 774-1086.

I'm not so sure he's ready for many visitors yet.

I'll keep you informed if I should hear any more.

151. WB5TTY Repeater Info

Yahoo group: Temple_ARC
Date: 2003-10-20 02:30:38 UTC
From: Anthony Mikulastik
Topic: 151 Message: 151

The repeater location at King Daughter's Hospital was lost due to the hospital's desire to support the Joe Bob Dorn's emergency radio project. All WB5TTY repeater equipment was removed from the KDH tower. The KDH location was lost just as equipment upgrades were being made to both repeaters. I was able to buy a very nice set of DB Products UHF Duplexers at the Belton Ham Expo. I was also able to buy a demo Kenwood TKR-850-1 UHF repeater to replace the old system. Steve Bosshard - NU5D has provided a very nice set of 10in Sinclair Duplexers and a pair of GE Phoenix radios for the VHF repeater on 145.490. Both the VHF and UHF repeaters are once again working very well thanks to Steve Bosshard's help. RF output is about 25 watts on both repeaters. I have decided to not use a phone patch on either of the new repeaters. I may link the UHF and VHF repeaters in the future.

The new repeater locations should allow the same or slightly less coverage area as the old KDH location (when the UHF repeater goes to its home after testing).

444.500 PL-Tone 88.5Hz

Kenwood TKR-850 Repeater (New)

DB Products Duplexer (New)

The repeater is currently located at my home but soon to move to a new home.

The repeater is OPEN for anyone to use.

145.490 PL-Tone 123.0Hz

GE Phoenix radios X2

Sinclair Duplexers (New)

The repeater is located at Bosshard Radio on 25th street in Temple, TX.

The repeater is OPEN for anyone to use.

Subject: [DILLO] "Will somebody go fix the repeater"

| Repeat of a classic:
| ------------------------------------------------
|
| "Will Somebody Go Fix the Repeater?"
| (A mostly-true story.)
| Brian Kantor, WB6CYT (c) 1992
|
|
| 11 pm Friday, finish the new control system and bolt it into the rack.
| Works great on the bench.
|
| Midnight: doesn't work in the rack.
|
| 2 am, works in the rack now. You really can't key the transmitter with
the
| audio line, dummy. Go to bed, you need two or three hours of sleep.
|
| 6 am, crew shows up and a bunch of us push the rack into the back of the
| jeep and wedge it in with test equipment, tools, ice chests, folding
| chairs, climbing equipment, antennas, 42 miles of hardline, and a
partridge
| in a pear tree.
|
| 7:30, we're at the bottom of the mountain, facing into the rising sun.
|
| 8:15, we're at the top of 15 miles of a road that was built in 1930 by the
| WPA. Everyone gets out to massage their kidneys by marinating the
| old corner-reflector wedged in the rocks where the tower fell down a few
| years back.
|
| 8:30, drop the rack when one of the crew carrying it the last 150 meters
up
| the hill (can't drive any closer to the building than that) trips over a
| loose rock. Pick up all the stuff that fell out and blow the dirt off it.
| Hope the crystals didn't shatter.
|
| 9 am, start installing all the loose stuff (duplexers, etc.) whilst the
| antenna crew starts the tower work.
|
```

| 1 pm, lunch. Shake the earwigs out of the icechest.
|
| 3 pm, radios are all working, on channel, and levels sound really good on
| dummy loads. Phone line doesn't work.
|
| 4:30 pm find and repair where the rats chewed through the phone drop
cable.
|
| 6 pm, last antenna hooked up. ON THE AIR. What's that interference on
the
| secondary input?
|
| 7 pm, sun sets.
|
| 8 pm, find the rotted ground strap on the tower and clamp it down.
Intermod
| goes away. Lock up the rack and give it a swift kick for good luck.
|
| 8:30, tweak our other repeater in the building back on channel and check
| the dev, since we might not be able to borrow the test equipment for a
| while. Crystal won't get any closer than 1 khz, so swear ONE MORE TIME

153. [PWF] Electrokinetic Microchannel Battery - first new method of producing power in 160 years

Yahoo group: Temple_ARC
Date: 2003-10-21 07:13:14 UTC
From: Steve S. Bosshard (NU5D)
Topic: 153 Message: 153

Scientists make power breakthrough

First discovery of its kind since 1839;
cheap, clean electricity from water may
one day fuel your cellphone batteries

EDMONTON, Alberta, Canada

October 20, 2003

One day, if a discovery by two University of Alberta engineering professors bears fruit, cellphones could be powered by a pressurized water system that would eliminate the need to recharge batteries.

With the help of two graduate students, engineering professors Daniel Kwok and Larry Kostiuk were able to light a small bulb by squeezing a syringe of ordinary tap water through a ceramic "filter" containing 10,000 microscopic tubes.

They did it by harnessing the natural energy that is created on a very tiny scale when a flowing liquid meets a solid surface.

Their discovery, touted as the first new way of producing electricity in 160 years, was published today by the London-based Institute of Physics.

"Hydrocarbon fuels are still the best source of energy but they're fast running out and so new options like this one could be vital in the future," said Kostiuk.

Kostiuk, who specializes in thermodynamics, and Kwok, whose expertise is in nanofabrication -- combined their skills with those of grad students Jun Yang and Fuzhi Lu.

They've termed it an Electrokinetic Microchannel Battery.

The apparatus, which is being lauded in news reports today around the world, easily produces up to 10 volts, about the same as a car battery, but a current of only a few thousandths of an ampere, Kostiuk said.

At a fraction of a watt, that's not enough to run a light bulb. But it could be enough to power the so-called "lab-on-a-chip" instruments envisioned by those working in nanotechnology or on MEMS -- micro-electronic mechanical systems, he said.

When pressed for a more everyday example, Kostiuk came up with the cellphone, which uses the voltage the device is capable of producing and a relatively small current.

Other uses might include powering Palm Pilots or calculators with water batteries.

Thinking on a grand scale, it could even be a clean-energy alternative to solar or wind power, he said. "But this would need huge bodies of water to work on a commercial scale."

Kostiuk said the research is still at an early exploratory stage. The model they built in the lab was to show people that the process works to produce electricity, he said.

"There's also a whole bunch of mathematics associated with it to prove to people it wasn't just a lucky guess -- that it was going to be there."

But the significance of the discovery wasn't lost on Kostiuk and Kwok, or their boss David Lynch, the dean of engineering.

"For the first time in a very long time we found a new way to convert one form of energy directly into electricity with no moving parts," Kostiuk said. "We were quite excited about it and that was the origins of the paper that's appearing in the Institute of Physics journal."

Lynch called it an incredible fundamental research breakthrough, the first of its kind in more than 160 years.

"This groundbreaking discovery will earn these researchers and the University of Alberta a place of prominence in scientific journals and textbooks for decades to come," he said.

Anticipating that electrokinetic cells may find numerous commercial applications, the U of A has filed a patent application and the inventors are working with the university's technology transfer group to develop a commercialization strategy.

It's been known for many decades that when a liquid such as water comes into contact with a non-conducting solid such as glass, ceramic or stone, an interaction occurs between the two at a microscopic level that creates a charge on the surface, Kostiuk said.

Because of the movement of positive and negative ions, the solid becomes negatively charged and the water next to the surface positively charged.

Kostiuk said his collaboration with Kwok and the discovery came about somewhat by chance after he was appointed chairman of the mechanical engineering department. He went around asking everybody what their research topic was and had a discussion with Kwok about many of the aspects of the behaviour of liquids and solids that led to their invention.

Kwok was explaining if one puts the water through a "microchannel," the positive and negative ions move so that one end becomes positive and the other negative. "I asked him ... couldn't we exploit that to create electricity," Kostiuk said.

Kostiuk was surprised by his response -- that it was possible but it hadn't been done before. In his turn, Kwok was surprised by the idea.

"I was walking on a cloud for the next day. I couldn't believe nobody else had really looked at this and done it before," Kostiuk said. One thing led to another and the result was indeed a battery -- but one unlike any that have gone before it.

HOW IT WORKS

When any liquid, such as water, comes in contact with a solid, such as glass, a tiny layer just a few millionths of a metre thick is formed at the interface of the glass and water. Called the electric double layer (EDL), this layer carries a small electrical charge.

By pushing the water through tiny tubes or channels in the glass about the same thickness as the electric double layer, an electrical current is produced and hence a voltage difference across the ends of the channels.

When an external circuit is added by placing electrodes at the ends of the channels, electrical energy is produced as current flows between the electrodes. The source of that energy is the work done to push the water through the channels.

What continues to strike Larry Kostiuk is the simplicity of their invention.

Using a syringe, they pressed water through their "filter," a two-centimetre glass disc with 450,000 holes in it -- something commonly found in labs, he said. The holes act as the microchannels where the charge is created.

They attached metal electrodes at either end of their device and connected them using a wire to create a pathway for the current -- and they had electricity.

"Embarrassingly, that's it," he said.

POWERFUL BREAKTHROUGHS

Subject: RE: WB5TTY 145.490 & 444.500 Repeater Changes

Hi Anthony,

The move is only about 4 miles and there is nothing else near the spacing limit on either frequency so it should be fine. Go ahead and mark up the renewals with the new location information at the Temple VA Hospital tower, sign them, and return them to the addresses shown.

Thanks for keeping us up-to-date with your repeaters.

73,

Harold, K5SXK

Subject: WB5TTY 145.490 & 444.500 Repeater Changes

Dear Sirs:

WB5TTY 145.490 & 444.500 Repeater Changes

The repeater location at King Daughter's Hospital was lost due to the hospital's desire to support the Joe Bob Dorn's emergency amateur radio project.
All WB5TTY repeater equipment was removed from the KDH tower. The KDH location was lost just as equipment upgrades were being made to both repeaters. I was able to buy a very nice set of DB Products UHF Duplexers and a demo Kenwood TKR-850-1 UHF
repeater to replace the old system. Steve Bosshard - NU5D has provided a very nice set of 10in Sinclair Duplexers and a pair of GE Phoenix radios for the VHF repeater on 145.490. Both the VHF and UHF repeaters are once again working very well thanks to Steve Bosshard's help. RF output is about 25 watts on both repeaters. I have decided to not use a phone patch on either of the new repeaters. I may link the UHF and VHF repeaters in the future.

The new repeater locations should allow the same or slightly less coverage area as the old KDH location (when the UHF repeater goes to the Temple VA Hospital Tower after
testing).

444.500 PL-Tone 88.5Hz

Kenwood TKR-850 Repeater (New)

DB Products Duplexer (New)

The repeater is currently located at my home but soon to move to a new home at the Temple VA Hospital tower location. The 444.500 Antenna will be at the 200 ft level on the tower. The FCC Data for the tower is as follows:

FREQUENCY
<http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/uls/uls_freq_res.hts?db_id=19&link=14145909&key=0&callsign=WPML266>

The repeater is OPEN for anyone to use.

145.490 PL-Tone 123.0Hz

GE Phoenix radios X2

Sinclair Duplexers (New)

145.490 is currently located at 503 South 25th Street in Temple.

Coordinates: 31-05-38.6 North by 97-21-21 West

Ground Elevation: 221 Meters

Tower Height: 53 Meters

Antenna Height to Tip: 56 Meters

Height Above Average Terrain: 102 Meters

Frequency: 145.490 Mhz. FM, 4.5 Khz. Deviation,

CTCSS 123.0 Hz.

Transmitter Output Power, 25 Watts

Duplexer and Feed Line Loss: 2.5 dB.

Antenna Gain: 7.5 dB, Omni Directional Pattern.

Effective Radiated Power, 78.9 Watts

The repeater is OPEN for anyone to use.

I have the current renewal forms for both repeaters but have had to make location changes for both repeaters. How should I proceed on the renewal process? It appears the coverage area will be the same or slightly less than my previous location at KDH Hospital in Temple, Texas.

Also please note both repeaters are open now with no phone patch.

Thanks,

Anthony Mikulastik, WB5TTY

Subject: RE: [ic7800] Latest Icom response. What's the deal?

Hi Chuck,

Actually, I have it on pretty good authority that the IC-7800 is not vapourware. To my knowledge, Icom does not have a history of announcing products without releasing them at an appropriate time.

Four working IC-7800's were on exhibit at the 2003 Tokyo HamFair and Friedrichshafen shows. Dayton may be the biggest of the big hamfests, but it is not the only one. There are links to these shows, and also to an IC-7800 workshop hosted by Mr. Inoue at HamFair, on my IC-7800 page:

http://www.qsl.net/ab4oj/icom/ic7800/7800links.html

My good friend Oba JA7UDE has placed an English summary of a new Icom Japan publication "All About IC-7800 Vol. 1" on his site.

http://www.archi.is.tohoku.ac.jp/~ooba/ja7ude/index.html Click on "What's New".

I also have it on excellent authority that the Ten-Tec Orion played no role whatsoever in the conception or design of the IC-7800. (Can you say "Rohde & Schwarz"?) The architectures of the two radios are vastly different. The only possible point of comparison is the selectable roofing filters, and my understanding is that Icom's design team reached this conclusion independently.

Cheers for now, 73,
Adam VA7OJ/AB4OJ

Subject: [ic7800] Latest Icom response. What's the deal?

Sent an email just asking about basic time frame of radio introduction, price. Here's the response I got this morning. What's up with this??

"Good Morning.

Thanks for your e-mail.

I'm sorry, but we have not been given any updates as to when this radio will become available nor do we have any pricing information yet. If I had to make a guess, I would imagine that it would be available for the Dayton Hamvention, but that is just a guess.

Best Regards;

Mike Hilton

Technical Support Representative"

To me, it's looking more and more like a "ghost vaporware radio" that will never hit the market. I'm bumming myself out... Comments?

This note and flier is to remind y'all of the upcoming 1st Annual Austin (Amateur) Radio RoundUp
to be held November 14th and 15th at St Louis Catholic Church, 7601 Burnet Rd, just South of Anderson Lane.

From I-35, take 183 North to Anderson Lane, turn Left at Burnet, left at St Joseph Blvd into the church grounds.
(183 to Anderson can be tricky- with large vehicle, take 183 to Burnet and go South ~2 miles)
From Mopac (Loop 1), take Anderson Lane East, right on Burnet, left at St Joseph Blvd into the church grounds.

Talk-in on 146.94(-).

http://maps.yahoo.com/maps_result?ed=PY4cFOp_0Tos2yPeeAhAaUc8tc3b_b8-&csz=austin+tx&country=us

If you'd like to pre-register, please contact Lori at KM5MQ@... or 512-255-6753

Area hotels have made special offers for Friday night. Please refer to www.AustinHams.org for details.

Commercial Vendor setup Friday afternoon from 2-~6PM (flea market setup 7AM Saturday).
Texas Bugcatcher and Austin Amateur Radio Supply have already reserved spaces!

Friday Dinner banquet from 7PM-10PM with musical entertainment, meet the Vendors, silent auction, etc.
$15 single or $25/couple includes 6 raffle tickets each! Early Bird raffle will be held Friday night!

Saturday outdoor (free) tailgating setup 6AM (or earlier). Please park in marked area!

Saturday indoor Flea Market setup 7AM, doors open at 8AM. $15 with and $10 without electricity.

Admission is $1 and includes one raffle ticket. Additional tickets are $1 each or 6 for $5.

1PM Grand Prize is an ICOM FT1500 2m mobile rig from Austin Amateur Radio Supply!

We'd love to see ya there!

Jeff N5MNW

<<...OLE_Obj...>>

AARC-ARO hosted Swapmeet is BACK!!! www.AustinHams.org

Nov 15 (Sat.) St Louis Catholic Church 7601 Burnet Rd
Setup 7AM, doors open 8AM til 1PM (grand prize drawing).

Tables- $10 in center (no elx), $15 (w/elx). Commercial Vendor setup Friday 2-5PM.
Friday Banquet $15/ea, $25/couple- includes dinner, music and six raffle tickets each!
Indoor area- 86' by 61', approximately 5200 square feet- room enough for 70 tables
Outside tailgaters' parking lot for cheap and early outdoor swapping.

$1 admission gets one raffle ticket, Additional tickets are $1 each or 6 for $5.
Grand Prize- Yaesu FT1500M 2m mobile, must be present to win.
TCARES talk- in on 146.94 and 7245KHz.

For reservations, contact Lori KM5MQ@... 512-255-6753 or Jeff N5MNW@...

161. Conditions are good

Yahoo group: Temple_ARC
Date: 2003-10-25 19:42:23 UTC
From: john_ke5c
Topic: 161 Message: 161

As predicted by NW7US, conditions are good right now for the CQ World Wide DX phone contest. I am not much of a phone operator and certainly not a phone contester, but I decided to play around and see how the bands were. Plus I have recently acquired a Ten-Tec amp that runs a pair of 3-500Z's, so I wondered if the amp would make a difference. I spent a few hours last evening and night and a few more just now. 10 meters is open, more so than in a long time. The amp makes a big difference on low bands where my antenna is an inverted doublet - an untuned inverted vee, 120 feet total length, 40 feet up at the center and 8 feet at each end, fed with ladder line, and tuned in the shack.

Hi All,
After going thru great extremes and others donating there time and equipment and experience, My Goal is finally complete..

I want to announce that the coordinated Lampasas 146.860 repeater is now back in operation with the 145.160 temporary repeater now taken offline..

I want to thank all that has helped me to accomplish this goal..

Special THANKS to BOSSHARD RADIO for his time and kindness of heart to complete our Lampasas Project..

There was a time when we was trying to get the 860 going but the equipment failed and had to revert to putting up the 145.160 machine (Non Standard) so that we could get the SWLynx running in Lampasas..

Wow with Gordon's Blessing and Steve's Outstanding Experience in Radios.. Our goal for over a year has just went into operation today....

From: john_ke5c
Topic: 165 Message: 165

On the way to San Antonio we learned our daughter was in the Plano Hospital ER with food poisoning. We turned around and headed north on I35, and around Hillsboro I stopped and put the HF antenna back on the car. I fooled around until reaching the southern end of Dallas where the traffic and the electrical noise from signs, power lines and other cars became too much. On the way back I operated from about the same southern fringe of Dallas to Waco. This is the first time since going mobile that I've concentrated on working SSB DX, but I thought with the contest on and conditions seeming to be better than in a long time, it was a reasonable way to pass the time. I had my laptop along to play with the GPS map program, but I also had the contest logging program on it, so Emily typed in the log while I drove. The 40 meter contacts are especially interesting since those are all split, and I had to set the transmit vfo in each case.

Steve,

Do you have the clock at http://www.mapmaker.com?
Similar to the one you sent, but has entire world.

Ron

The Sun Clock listed at end of Mapmaker URL is the
one in which you folks will be interested. Great for
those international chats.

From: Steve S. Bosshard (NU5D)
Topic: 174 Message: 174

The links for Testing, Problems, and Single Point are pretty interesting.

ssb

Lyncole XIT Grounding is offering a Grounding Course in Hilo, HI
on January 22-23, 2004. The course information sheet is at this
link along with our entire course schedule for 2004:
http://www.lyncole.com/pdf/Lyncole_2003-04_Courses.pdf

Learn why 95+% of grounding system testing is wrong:
http://www.lyncole.com/pdf/Grounding_System_Testing.pdf

Learn how the professionals identify grounding
system problems:
http://www.lyncole.com/pdf/Grounding_Problems.pdf

Learn about sensitive communication equipment grounding:
http://www.lyncole.com/pdf/R56_Single_Point_Ground.pdf

The 2004 course schedule lists all of our 2004 courses including
Hawaii; Hartford, CT; New Orleans, LA; McLean, VA; Anchorage,
AK; Syracuse, NY; Denver, CO; Los Angeles, CA; Chicago, IL;
Dallas, TX; and Las Vegas, NV. We also have one remaining course
in 2003 in Las Vegas on November 13-14, 2003.

If you enroll and pay for a course before December 31, 2003, the
course fee is $595 per person. Starting January 1, 2004, the
course fee will increase to $695 per person. The course fee
includes materials, continental breakfast & lunch. Sessions are
from 8:00 A.M. to 5:00 P.M.

You may enroll in the Hawaii course now (or any other Lyncole
course) by filling in the form above and faxing it back to:
310-214-1114.

You can also enroll on-line at this link:
http://www.lyncole.com/s-sem.agenda.asp

175. Modifying CW Prosigns in MixW

Yahoo group: Temple_ARC
Date: 2003-10-29 09:05:41 UTC
From: Charlie Schlieper
Topic: 175 Message: 175

The MixW reflector recently had some reports indicating that the latest version of MixW2.10b had changed the "(" which sent "KN" as a CW PROSIGN to "KK" instead. "KK" is the same as the right parenthesis ")" in the program. Some do not use KN at the end of a transmission during a contact, but even if you don't, learning how to modify the program for CW PROSIGNS might be useful. Not only can you correct this particular problem, but you can also add NEW prosigns that the program doesn't contain, if desired.

Use a good editor such as WORD 97 or better, and edit the file ENG.CWT which is inside the MixW folder. NotePad, in Windows 98 platform, seems to corrupt the process for UNICODE editing, so you might want to steer clear of it. I suggest that you rename or save your original ENG.CWT file somewhere, just in case a mistake is made.

73, Charlie N5TD

Topic: 178 Message: 178

Excerpt from Michigan APCO filing

"Quite frankly, the idea of providing widespread access to the Internet or widespread digital communication links using existing power lines might at first glance sound like a good idea. However our committee members, who have years of direct experience in public safety communication issues and considerable knowledge of the science of radio frequency propagation, believe it represents a threat of the most serious nature to public safety radio systems. This objection also means we consider BPL/PLC to represent a threat to the health and safety of Michigan's citizens. The issue was so clear to our membership that after considering the issue, they voted as one voice to urge you to terminate any idea of BPL/PLC. Since this committee is composed of system administrators with years of experience and education who are prone to speaking their"

180. CW3 Morse Practice Program uploaded to Files Section

Yahoo group: Temple_ARC
Date: 2003-10-30 12:42:21 UTC
From: Steve Bosshard
Topic: 180 Message: 180

CW3 by William A. Thompson
Beta version 0.91

This program is intended to help the user practice the International Morse Code (sometimes called cw) so that they may be able to get an Amateur Radio License. The program can send cw at 5 to 35 words per minute. It can send text from a prepared file, random letters, or random words. It will allow the user to print the text that has been sent or to save the sent text to a file. That file can then be sent again later, if desired.

Installation
1. Create a new directory
2. Copy the zip file into the new directory
3. Unzip the contents of this file to the new directory.
4. From the file manager or Windows Explorer, double click on cw3.exe to start the program.

You may also want to create a shortcut for CW3. In Windows 95, right click with the mouse on cw3.exe. A menu will come up, one of the choices
is to "create a shortcut". Scroll down and select "create a shortcut".
If you right click on the start menu and click on "open", then double click on programs, it opens the programs folder. Drag the shortcut to CW3
into the folder and release it. Now click on start and the shortcut will show up in programs.

This program is freeware. This means that you may make as many copies of the program as you like and give it to anyone you wish to give it to. You may NOT sell the program, but you may charge a nominal copying charge of less than $6.00 (US Dollars) for providing a copies to others. You may also include this program on a CD-ROM or DVD-ROM as part of a collection of shareware/freeware programs. You may not change this program or its help file in any way.

Any comments about this program should be directed to:

billth8@...
Changes in release 0.91:
1. Added support for soundcards.
2. @xy special characters no longer have a space after them.
3. Fixed occasional crash when sending with internal speaker.

Know problems in this release:
1. rapidly clicking on the "start" and "stop" menu items will start more than one CW generator process, resulting in garbled code being sent.

2. Unpredictable behavior if two copies of CW3 are run at the same time.

184. Highway Signs / GMRS Repeater / More Voter / By Laws

Yahoo group: Temple_ARC
Date: 2003-10-30 17:55:01 UTC
From: Steve S. Bosshard
Topic: 184 Message: 184

1 - Some cities have signs denoting local repeater frequencies for travellers - I would like to see the Temple Amateur Radio Club look into this possibility. A sign noting HAMS - 146.280 / 123.0 near Temple and Belton, plus a sign noting HAMS 146.660 / 123.0 near West and Lorena would help travellers make contact with area hams and really enhance the value of Ham Radio to our communities.

2 - GMRS is an acronym for General Mobile Radio Service, a licensed radio service available to all citizens (not just hams) for personal and limited business communications. The entry requirement is an application form and filing fee of $35 for a 5 year term (last time I looked). Eligibility is a person, over 18 years of age, and a US Citizen without a felony record.

I would like to see the Temple Amateur Radio Club explore the possibility of sponsoring a GMRS system for citizens involvement in emergency communications without limiting ourselves the strictly Ham operations and in doing so expand the capabilities of TARC and it's value to the community and area. We could re-channel our 444.700 repeater, or look at placing a new repeater in the area. This could be as simple as a couple of used mobile radios and a duplexer.

3 - Our site voter system started with $1500 for one site. We have three sites up and running for just a few $$$ more. Please consider funding the experimental Temple / Waco link between 146.660 in Waco and 146.820 in Temple. This provides walkie talkie communications between Hillcrest in Waco, and both Scott and White and KDH and the VAMC in Temple. Along with this I would like to retain the voter in Belton in order to better serve the City of Belton and the Bell County Communications Center and ADD a 5th site in Moody. New money on the order of approximately $1000 will be needed to move further.

4 - Finally, Jim Shepherd found a trouble and a solution in the club's bylaws concerning duties and responsibilities of the board of directors and I hope the board will act on Jim's recommendations.

This is one members opinion and wishes and certainly does not necsssarily represent the wishes of the club, but rather is some brainstorming to further the interests of TARC and ham radio in general. Please comment and discuss this matter to the fullest extent.

> communications without limiting ourselves the strictly Ham operations
and in

to have effective emergency communications you need equipment and participants. which citizens would participate in this? who would buy a gmrs transceiver to participate in emergency communications, and who would train them? the folks most interested are us and the cb'ers, and i don't know how active they are anymore. we may have our hands full already just organizing ourselves.

> sites up and running for just a few $$$ more. Please consider funding

From: Steve S. Bosshard
Topic: 184 Message: 187

Hey John KE5C,

1 - Most everyone was a stranger at one time or another. This would mean moving out of a comfort zone, but as they say, no risk, no reward. You don't light a candle and put it under a basket.

2 - Build it and they will come. We did have a GMRS repeater and some advocates to help promote things. The repeater died. I did not resurect it. The few users that were there went away. Might be a mistake. Don't know. Right now the area is limited in the number of hams that can respond during a communications need. Expanding to include non-ham operators, ie CERTS and Volunteer Fire fighters that are not hams could be a good thing. Several folks in the emergency management community are offering training.

3 - Mo Money - Both Waco/Temple and another voter site.. The link radio are running about $50 a pop, plus coax and antennas. We have 4 voting sites. To move beyond this means another 4 port card with the output of the second card feeding one of the inputs of the first card. The cards are roughly $500 each, plus the link radios. I will be pleased to offer a full accounting with receipts and so forth. Please understand these are estimates and may vary a bit. Some of the used radios that are being ordered "as is" might need repair, etc.

Good questions and,

I did ask....

cu,

steve

I think this is my first post to Temple_ARC, but the recent topic was of interest. Prior to retiring and moving to the Philippines, I managed KSLU Public Radio in Hammond, LA and was active in SELARC. (SouthEast LA Amateur Radio Club) I got a grant from State Farm Ins. and purchased a nice Kenwood tri-band, and some other
equipment and my CE at the station (W5AVZ) obtained an old Collins HF rig. We were able to set up a rather nice emergency broadcast center in the station which became very helpful several times during hurricanes, chemical spills on the railroad and I-55 which ran through town. We also had two other antennae connections and SELARC members could bring in their two meter rigs during these times. The station had a 40K watt emergency generator so we had power for our transmitter, lights, and air-conditioning. The university food service took care of meals. The AC and food usually enticed the club members to participate since their homes were usually without power for a couple of days during a hurricane. The information the club provided really contributed to our radio (90.9 FM) broadcast since some of the club members were mobile and would send in reports which we could air to the FM audience.

Sorry for long a diatribe, but maybe Temple ARC could work out something like that with one of local stations. StateFarm was very willing to contribute since we were providing information which could possibly save them money during the emergency times.

You buy electrical black tape in ten packs.
You've stripped wire with your teeth.
You've told your son that, "One day, all this will be yours", and he doesn't respond.
You'd rather help a buddy put up a new tower than mow the lawn.
You've grabbed the wrong end of a soldering iron.
You start giving out RST reports when you are on the telephone.
The propagation forecast means far more to you than the local weather forecast.
The microphone or visual aids at a meeting don't work and you rush up to the front to fix it.
You tell the XYL, when she notices a new rig in the shack, why that has been there for years.
Your watch is set only to UTC.
You prayers start off something like: CQ CQ CQ GOD DE (your callsign).
You ever had to patch your roof after an antenna project.
Your Ham radio magazines comprise more than 50% of your bathroom library.
You ever put a GPS tracker in the XYL's car, just so you could watch her on APRS.
You and the XYL took a cruise so you could visit the radio room.
You ever tapped out HI in Morse on your car horn to another ham.
You ever had an antenna fall down.
Your teenager refuses to ride in your car because it looks like a porcupine.
You know the 6 character Grid, and the Latitude and Longitude of your home QTH.
You go into the local Radio Shack store and the clerk asks you where something is.

The History of EMWIN
Home | Software | FAQ | History | Contact

EMWIN began as a quest for an inexpensive method to distribute weather information directly from the National Weather Service (NWS) to schools in the Washington, D.C. area. James Doherty, an employee of the NWS, had just completed a touch-screen weather display for Congressional Representatives and thought that it should be possible to direct the same data stream to personal computers via a wireless system. Wireless data delivery was desirable, since budgetary constraints of most inner-city schools precluded the delivery of data via telephone connections due to the recurring monthly charges to maintain a telephone line.

In March of 1994, Mr. Doherty visited my former business, Maryland Radio Center, Inc., an Amateur Radio equipment store and service center in Laurel, Maryland. He was aware that amateur radio operators were transferring data between computers using packet radio, had monitored packet radio and other Amateur Radio data signals, and thought it might be possible to adapt Amateur Radio equipment to the task. He discussed NWS' needs with me and I agreed that it might be possible to utilize Amateur Radio equipment, but that it did not allow for the broadcast of interrupt-driven one-way data. I agreed to look into developing a system and Mr. Doherty left me with the following list of requirements:

The system should:
- Be inexpensive due to the minimal budget available to the target users.
- Transfer up to 10 Mbytes of data in a period of 24 hours.
- Deliver near real-time severe weather information.
- Serve an area within a radius of 50 miles of Washington, D.C.
- Transfer text, graphics, images, and other computer data to be defined.
- Broadcast to an unlimited number of users in the service area.

After considering the above requirements, I developed the necessary hardware to demonstrate the feasibility of transferring raw binary data over VHF radio. The hardware was connected to a transmitter and receiver, and software to send small blocks of data was developed. This proof-of-concept system was demonstrated to Mr. Doherty at my Laurel, Maryland location in April of 1994. Following the successful demonstration of the proof-of-concept system, I was invited to meet with Mr. Doherty at the NWS Headquarters. At this meeting, it was agreed that I should continue to develop the system and that funding would eventually be found.

In May, 1994, I delivered test equipment and very preliminary software to Mr. Doherty and a test signal was put on the air on 163.350 MHz from the NWS

headquarters building in Silver Spring, MD. The test transmitter was monitored at many locations in the Washington, D.C. area with excellent results and I began developing a system that would fulfill all of the requirements outlined at our first meeting.

? To keep the system inexpensive and still allow the transfer of 10 Mbytes of data in a period of 24 hours, the system was limited to a 1200 baud data rate. Limiting the data rate also meant that a simple demodulator could be connected to the speaker of any receiver or scanner. At baud rates above 1200, it would have been necessary to modify the receiver to provide specific characteristics making the system unnecessarily expensive for the end user.

? The necessity of transferring large files at 1200 baud presented a very real possibility that a warning message would be delayed while a large file was being transferred. For this reason, I developed the Quick Block Transfer (QBT) protocol that divided messages into small segments for transmission. By creating a multiple precedence transmission system, I was able to interrupt large, low priority files to insert high priority messages, then continue the transmission of the large file. The transmission system also included the ability to compress files before transmission effectively making the maximum data transfer in 24 hours more than 20 Mbytes.

? To ingest data from the NWS Gateway and Weather Wire systems, it was necessary to develop applications to monitor data, and place it in the queue for transmission based on precedence.

Shortly after reception tests proved successful, the preliminary transmission software was completed. Many revisions were accomplished during the initial years of testing and the system was christened the Wireless Weather Information Network (WWIN).

Since the system was useless without software to receive the data, I developed a simple WWIN receive program that was made available at no charge to anyone within range of the transmitter.

Eventually, the WWIN acronym was dropped in favor of the Emergency Managers Weather Information System (EMWIN).

During the life of the EMWIN system, I personally developed the following EMWIN system modules:

The QBT Protocol
This protocol is what makes EMWIN work. It established the method for dividing messages into small pieces to allow the interruption of large, low priority messages by messages of a more immediate nature. The use of this protocol insures timely notification of impending severe weather events, even at a very low data rate. The QBT Protocol was first provided to the NWS in April of 1994, with the latest version delivered in June of 1994.

Gateway Engine
The Gateway Engine captures messages from the NWS Gateway and makes them

available for processing by the EMWIN Housekeeper. This module and derivatives of this module feed the EMWIN system and populate the NWS Interactive Weather Information Network (IWIN) web site. Without this module both the EMWIN and IWIN systems would be inoperative. The Gateway Engine was first provided to the NWS in May of 1994, with the latest version delivered in July of 1998. Updated versions were periodically provided during this time period.

EMWIN Housekeeper
Messages that are intercepted for transmission on the EMWIN system are prioritized and scheduled for transmission by this module. Without this module, the EMWIN system would be inoperative. EMWIN Housekeeper was first provided to the NWS in May of 1994, with the latest version delivered in June of 1999. Updated versions were periodically provided during this time period.

EMWIN Transmit
The EMWIN Transmit module formats messages for transmission on the EMWIN system. This is the module that allows the interruption of large files by high priority files thereby decreasing notification time for warning and watch messages. Without this program, the EMWIN system would be inoperative. EMWIN Transmit was first provided to the NWS in May of 1994, with the latest version delivered in June of 1999. Updated versions were periodically provided during this time period.

Zipfile Creator
The Zipfile creator makes periodic compressed files containing selected products and makes them available for download via FTP by EMWIN users on the Internet. Without this module, EMWIN data would be unavailable via internet FTP. Zipfile Creator was first provided to the NWS in June of 1996, with the latest version delivered in June of 1998. Updated versions were periodically provided during this time period.

Satellite Image Processor
The Satellite Image Processor was written to allow the capture and retransmission of GOES satellite images. The NWS no longer uses this program. Satellite Image Processor was provided to the NWS in October of 1994.

WWIN Receive
This program was written early in the EMWIN program, when it was still known as the Wireless Weather Information Network (WWIN) and was used to provide a simple client program for the monitoring of the WWIN system. The NWS no longer uses this program. WWIN Receive was provided to the NWS in October of 1994.

Web Grabber
This program captures graphic files and makes them available for transmission on the EMWIN system. Without this module, no graphic files would be available on the EMWIN system. Web Grabber was first provided to the NWS in September of 1996, with the latest version delivered in March of 1998. Updated versions were periodically provided during this time period.

Weather Wire Engine
The Weather Wire Engine captures messages from the NOAA Weather Wire Service (NWWS) and makes them available for processing by the EMWIN Housekeeper. This module and derivatives of this module feed the EMWIN system and populate the IWIN web site. Without this module, both the EMWIN and IWIN systems would be inoperative. Weather Wire Engine was provided to the NWS in July of 1997. Updated versions were periodically provided.

EMWIN Retransmit (16 bit)
This three-level precedence driven retransmit program monitors the GOES EMWIN feed and allows the selection of specific messages for retransmission. Without this program, it would not be possible to provide data via VHF radio transmission. EMWIN Retransmit (16 bit) was first provided to the NWS in January of 1997, with the latest version delivered in October of 1999. Updated versions were periodically provided during this time period.

EMWIN Retransmit (32 bit)
This ten level precedence driven retransmit program monitors the GOES EMWIN feed or the EMWIN ByteBlaster feed and allows the selection of specific messages for retransmission. Without this program, it would not be possible to provide data via VHF radio transmission. EMWIN Retransmit (32 bit) was first provided to the NWS in November of 1998, with the latest version delivered in November of 1999. Updated versions were periodically provided during this time period.

ByteBlaster Hostmaster
This program communicates with ByteBlaster Server and orders the list of servers so that system loading is shared among all servers. Without this program EMWIN via the Internet using streaming sockets (push data) would not be available. The ByteBlaster system is a unique method of delivering streaming data that was developed specifically for EMWIN. ByteBlaster Hostmaster was first provided to the NWS in June of 1998, with the latest version delivered in January of 2001. Updated versions were periodically provided during this time period.

ByteBlaster Server
The ByteBlaster Server accepts connections from EMWIN users on the Internet and provides a stream of data identical to the GOES EMWIN feed. Without this program EMWIN via the Internet using streaming sockets (push data) would not be available. ByteBlaster Server was first Provided to the NWS in June of 1998, with the latest version delivered in January of 2001. Updated versions were periodically provided during this time period.

ByteBlaster Client
The ByteBlaster Client connects to ByteBlaster Server, receives a stream of data identical to the GOES EMWIN feed, and stores it on the end-user computer. Without this program EMWIN via the Internet using streaming sockets (push data) would not be available. ByteBlaster Client was first provided to the NWS in June of 1998, with the latest version delivered in February of 2000. Updated versions were periodically provided during this time period.

Call: KE5C
Operator(s): KE5C
Station: KE5C

Class: Single Op LP
QTH: TEXAS
Operating Time (hrs): 13

Summary:
Band QSOs

160: 0
80: 38
40: 168
20: 31
15: 77
10: 100

Total: 414 Sections = 74 Total Score = 61,272

Club: Central Texas DX and Contest Club

Comments:

My weekend and enthusiasm were shortened by station problems. I opened on 10
then moved to 15. Both stayed opened so long that I next went to 40 for closer
multipliers. By the the time I got to 20 the first night, most folks had moved
to 40, however, it was worth the trip to pick up AK. On the second day, I had
worked most of the CQ'ing stations already on the other bands, and holding a
frequency (that worked) was difficult on 20, especially with my rig's
intermittent operation. So I spent much of my time in S&P mode until throwing
in the towel. My dream goal was a sweep - next year ...

STATION:
1) Ten-Tec OMNI 6 Plus
2) HyGain Explorer-14 tribander at 45 feet
3) Inverted doublet, peak at 40 feet, 60 feet per leg, ladder line and tuner.

205. AOR-9800 Digital Report

Yahoo group: Temple_ARC
Date: 2003-11-06 06:45:51 UTC
From: Charlie Schlieper
Topic: 205 Message: 205

Hello to all interested in DIGITAL AUDIO on the Ham bands.

Steve, NU5D, and I have been testing digital audio on the ham bands-- with the new AOR ARD-9800 Fast Radio Modems. The results have been exciting, as well as mixed. The bottom line is, the new systems seem to work better on VHF/UHF FM Mode than in HF SSB, but more testing is needed.

The two Digital Units tested today work great in the VHF/UHF FM mode, and I made several discoveries during my testing. One of the things not made clear in the manual was the fact that these units will work very well hooked up to RADIO DATA PORTS, even using the "fixed-level" AUDIO fed from these ports. This method frees up both the Mic and the variations in operation which can be caused from different Volumn control settings. This type of connection was made to an ICOM 821, allowing the existing Mic to remain hooked up for "NORMAL" operation.

The Data port method on the IC-821 was compared to a direct Mic hookup with the IC-970. After much testing between the two systems, I prefer the Data port method over using the Mic Input.

Multi-Function A/B SWITCHBOXES are the answer for hams who need to switch a RADIO between an Isolated Sound-Card Computer Interface, and a DIGITAL system such as this.
Multi-Function A/B Switches are not as well known as standard dB-9 or dB-25 types, but they often contain multiple type JACKS on the rear, all of which are switched at the same time. I modified one today-- which had three round (black) 5-pin female chassis-mount DIN connectors in the rear. I changed out the 5-pin DINs, and replaced them with 8-pin DINS (part # 33-0978-00BU) which were available locally. Works great! Changing cables back and forth to have flexibility between systems just isn't convenient. The modified switchbox makes it easy.

The AOR units have a short synchronization "HEADER" in which the receiving end hears a digital buzzing for a brief second, but then it changes into a full quieting background with only the perfectly decoded audio.

As I mentioned, HF SSB operation with these units seems to be a little more challenging than mentioned in the manual. I also believe that these external add-on units are probably a little costly, at $550.00 each.

But we're having fun exploring something new in Ham Radio...
73, Charlie, N5TD

211. Exploding phones

Yahoo group: Temple_ARC
Date: 2003-11-08 01:21:05 UTC
From: Steve S. Bosshard (NU5D)
Topic: 211 Message: 211

More On Exploding Phones
Contributed by derek on Thurs, Nov 6 2003

Mike has been critical of Nokia's attitude after some of their phones exploded, and I defended Nokia saying it was likely a case of the customer adding a cheap, aftermarket battery which caused the heat-up. I turns out we were both right: Nokia should have reacted with more concern, but it does appear to be the fault of cheap aftermarket batteries that Nokia that phones are exploding. With that finding, Nokia's reaction is to counsel the market to only buy "original Nokia parts from an authorized or reputable dealer." Hmmm... given that profit margins on accessories and parts are always higher than standard equipment, the whole "exploding phone" issue, although not a child of Nokia's creation, is entirely beneficial for them. Have you seen all the stickers and inserts and nonsense that HP puts on printers suggesting catastrophic outcomes if you should use non HP ink, or... heaven forbid...try to refill a cartridge? They've been trying to convince us our printers would explode because of non-HP ink for years. Yep, what big businesses really needs is more exploding cheap parts to drive customers back to good old OEM products.

213. Fw: HAM LOGGING PROGRAMS

Yahoo group: Temple_ARC
Date: 2003-11-08 20:31:26 UTC
From: Ronald W. Thompson
Topic: 213 Message: 213

I have looked for years for good logging programs which were easy to use and yet full of features needed for ham radio applications. Thanks to W5RYV, I have found logging programs which answer all of my needs. I thought possibly
that this web site may be of interest to others looking for excellent logging programs.
http://www.n3fjp.com/index.html

I think you will find this list helpful.

216. TARC Christmas Dinner

Yahoo group: Temple_ARC
Date: 2003-11-09 02:57:45 UTC
From: Kay Schlieper
Topic: 216 Message: 216

On December 4th, in place of our regular TARC meeting, we will have our annual Christmas Dinner. Its going to be at 7:00pm in the Dinning Hall of the Meridian on South 31st St. here in Temple. The chef is planning to serve us sliced Ham and Beef, baked potato, green beans, salad, iced tea and coffee, and pumpkin pie or carrot cake for desert. TARC members and their families are invited to come and join in the food and fellowship. We have to give the chef a count of how many to prepare for, so if you have not already made your reservations, we will need your reservation no later than November 25th. The cost will be $5.00 per adult, and children under 12 eat free. You can mail your check for your reservation to TARC, P.O. Box 616, Temple, TX 76503.

I hope to see you there,
Kay, KB5DC

218. Some Missing Q signals

Yahoo group: Temple_ARC
Date: 2003-11-09 18:54:26 UTC
From: john, ke5c
Topic: 218 Message: 218

Some Q signals have never made it to the ARRL's official list. As with regular Q signals, each can be a statement or a question, depending on whether a question mark follows it.

QLF I am sending with my left foot.
QLF? Are you sending with your left foot?

QRC Warning, rag chewer on frequency.
QRC? Are you a rag chewer?

QOK Your last transmission was Okie Dokie.
QOK? Was my last transmission OK?

QFH This frequency is hogged! - go elsewhere.
QFH? Is this frequency hogged?

QBS It's getting deep in here.
QBS? Did I tell you about the one that got away?

QZZ I fell asleep at the mike.
QZZ? Is that a 60Hz hum, or are you snoring?

QBA My antenna is BIG!
QBA? How big is your antenna?

QHI I am jumping in quick to say hi, then going QRT.
QHI? Are you leaving after only one transmission?

QBO Don't sit next to that guy in the meeting.
QBO? Buddy, can you spare some soap?

QCW I am going to whistle Morse Code on FM (or SSB)
QCW? Why are you whistling Morse?

QET Phone home.
QET? Has anyone called me from another planet?

QBB I am going to the fridge for a beer.
QBB? Are you getting ANOTHER beer?

QBP I need a Quick Potty Break
QBP? Do you need a Quick Potty Break??

(Copied without permission from W2AGN web page.)

220. Texas State Guard ARC

Yahoo group: Temple_ARC
Date: 2003-11-10 04:35:10 UTC
From: Steve S. Bosshard (NU5D)
Topic: 220 Message: 220

Everyone is invited to the TSGARC Thankgiving Dinner from 6:00-7:00 p.m. Monday, November 10 at the clubhouse, 3292 Speegleville Rd., halfway between Hwy 84 and Hwy 6.

The menu consists of Turkey, ham, dressing, mashed potatoes, giblet gravy, green bean casserole, fruit salad, cranberries, homemade bread, desserts and ice tea.

Program: 7:00 p.m. This month's program will be a 'hands on" exercise using Slo-scan and ATV equipment. All units will be supplied by the club so be prepared to have some fun operating the cameras, laptop communications and watch the "action" on ATV.

Come out to the clubhouse Monday evening for a TSGARC food, fun and great fellowship evening. Hope to see you there.

Leon Cheney, K5ZZM

TSGARC Minutes for October 13, 2003

Twenty-one TSGARC members and 6 guests enjoyed a buffet dinner from 6:00-7:00 p.m. on October 13. Chaplain gave the dinner prayer. Following dinner, Larry and David Bush were surprised with a decorated cake to thank them for generously providing the clubhouse facility and to celebrate this first year anniversary at the clubhouse.

James introduced the guests and thanked club members and guests for attending.

7:00 p.m. Program. Ted Babb opened the program with a prayer and a moving PowerPoint presentation in remembrance of the 911 terrorist attack. The remaining program consisted of Leon Cheney and Ted Babb presenting an overall explanation of the W5TSG Emergency Relay Plan followed by Q & A.

223. K5DOA on the list - note on cathode keying

Yahoo group: Temple_ARC
Date: 2003-11-11 03:09:14 UTC
From: darwindoa
Topic: 223 Message: 223

Well it looks as if I successfully negotiated getting a yahoo ID and made it to the list. Thanks to Steve for the invite.

Just a small technical note for those of you who may be thinking of doing a bit of tube type homebrewing. The article on cathode keying in this months QST was well done and the precautions are probably in order. But the basic technical premise put forth in the article is somewhat flawed. The author states that the cathode of a cathode keyed rig will go up to the B plus voltage when the key is opened. This is not really the case. Since the grid is grounded to DC, the cathode will only rise to the voltage sufficient to cut off the tube. This is typically about 25 to 75 volts or so for small tubes. Still enough to give you a tingle, so take the precautions listed. But if the premise stated in the article were correct, most of us boatanchor guys would be DOA by now from adjusting our bugs.

Let me know if anyone wants any info on homebrewing simple tube type transmitters or regen receivers. They can put the fun back into ham radio on cold winter nights. To listen to the action or get involved, try around 3547 in the evening about 01-03Z. 73 all - Darwin K5DOA

224. Re: [Temple_ARC] K5DOA on the list - note on cathode keying

Yahoo group: Temple_ARC
Date: 2003-11-11 04:24:32 UTC
From: Steve S. Bosshard (NU5D)
Topic: 223 Message: 224

That is exactly how a cathode resistor stabilizes an amp - as IP goes up,
so does EK while the grid remains tied to either ground or C.

Looks like I need to find an old TV with a 5U4 and xformer and
some sockets - probably fry myself,

ssb

225. Emergency Relay nets

Yahoo group: Temple_ARC
Date: 2003-11-11 20:45:37 UTC
From: Carolyn Black
Topic: 225 Message: 225

W5TSG Emergency Relay nets are held on Wednesday evening at 7:30 p.m. on the 147.180 repeater for Bell, Bosque, Coryell and Hamilton county check-ins, 146.780 repeater for Hill County and the 145.39 repeater for Navarro, Freestone and Limestone area county check-ins. If you reside in one of these areas, we invite you to check in at 7:30 p.m. to represent your county. The W5TSG traffic and training net is held at 8:00 p.m. as usual on the 147.320 repeater with check-ins from McLennan county and all other ham radio operators wishing to participate.

The goal is to have check-ins from within the county and would most welcome someone volunteering to hold an Emergency Relay net on the 146.820 repeater for Bell county check-ins. Please contact Leon Cheney, K5ZZM lcheney@... The Emergency Relay nets will continue through December only and then simplex relay stations will be established in the District 7 areas with the ability to reach one another by relay.

The TSGARC initiated a plan on October 15, 2003 to link all volunteer ham radio operators to central relay units throughout the central Texas area for the purpose of providing emergency command centers with a single radio net capable of linking all areas. Phase I of this plan is to unite Ham operators on their respective repeaters throughout District 7 by merely checking in giving their call sign, name and general location at 7.30 p.m. every Wednesday evening prior to the W5TSG traffic and training net. Phase II calls for simplex relay stations to be established in the District 7 areas with the ability to reach one another by relay. Phase III will be the final implementation of the plan where we are connected to other emergency services on a regular basis.

We thank you for your support and participation as each of us strive for the common goal of "emergency preparedness" and to enjoy the hobby of ham radio in general.

73,
Carolyn Black KD5GLM
TSGARC secretary/treasurer

226. Fw: WARNING

Yahoo group: Temple_ARC
Date: 2003-11-11 21:30:49 UTC
From: Ed Stewart
Topic: 226 Message: 226

Subject: Fw: WARNING

Here we go again!!!!

809 Area Code

We actually received a call last week from the 809 area code.
The woman said "Hey, this is Karen. Sorry I missed you--get back to us quickly.
Have something important to tell you." Then she repeated a phone number beginning with 809.
We didn't respond.

Then this week, we received the following e-mail:

Subject: DON'T EVER DIAL AREA CODE 809, 284 AND 876

THIS IS VERY IMPORTANT INFORMATION PROVIDED TO US BY AT&T.
DON'T EVER DIAL AREA CODE 809

This one is being distributed all over the US. This is pretty scary,
especially given the way they try to get you to call.
Be sure you read this and pass it on to all your friends and family so they don't get scammed!
MAJOR SCAM:
Don't respond to Emails, phone calls, or web pages which tell you to call an "809" area Phone Number.

This is a very important issue of Scam Busters because it alerts you to a scam that is spreading *extremely* quickly, can easily cost you $2400 or more, and is difficult to avoid unless you are aware of it.

We'd like to thank Verizon for bringing this scam to our attention.
This scam has also been identified by the National Fraud Information Center and is costing victims a lots of money.

There are lots of different permutations of this scam.

HERE'S HOW IT WORKS:

You will receive a message on your answering machine or your pager, which asks you to call a number beginning with area code 809. The reason you're asked to call varies. It can be to receive information about a family member who has been ill, to tell you someone has-been arrested, died, to let you know you have won a wonderful prize, etc. In each case, you are told to call the 809 number right away. Since there are so many new area codes these days, people unknowingly return these calls.

If you call from the US, you will apparently be charged $2425 per-minute.
Or, you'll get a long recorded message. The point is, they will try to keep you on the phone as long as possible to increase the charges. Unfortunately, when you get your phone

bill, you'll often be charged more than $24,100.00.

WHY IT WORKS:
The 809 area code is located in the British Virgin Islands (The Bahamas).
The 809 area code can be used as a "pay-per-call" number, similar to 900 numbers in the US.
Since 809 is not in the US, it is not covered by U.S. regulations of 900 numbers, which require that you be notified and warned of charges and rates involved when you call a pay-per-call" number.

There is also no requirement that the company provide a time period during which you may terminate the call without being charged. Further, whereas many U.S. homes that have 900 number blocking to avoid these kinds of charges, do not work in preventing calls to the 809 area code.

We recommend that no matter how you get the message, if you are asked to call a number with an 809 area code that you don't recognize, just disregard the message.

Be wary of e-mail, or calls, asking you to call an 809 area code number. It's important to prevent becoming a victim of this scam, since trying to fight the charges afterwards can become a real nightmare. That's because you did actually make the call. If you complain, both your local phone company and your long distance carrier will not want to get involved and will most likely tell you that they are simply providing the billing for the foreign company. You'll end up dealing with a foreign company that argues they have done nothing wrong.

Please forward this entire message to your friends, family and colleagues to help them become aware of this scam.

Subject: [ic706] RE: Audio feed back

|
| Hi Rick
| I had not been following up your thread. Reminds me
| the problems I have been facing..pretty much similar.
| I on the 7th floor running a 10 m longwire with an
| AH4. The transceiver is a MKII with a remotely mounted
| head. It took me a while to get around the RF creeping
| into the shack and shutting the radio off. Let me give
| you a few points to think about that helped me
| 1. A perfect RF grounding of the radio, power supply
| and the tuner - I use a water pipe in my apartment.
| 2. An excellent counterpose for your antenna
| 3. Avoiding coiling of cables - power supply,
| feedline, the remote head mounting cable etc.
| Whereever you can trim it, I would recommend it.
| 4. Use ferrite cores on whatever cables you have.
| 5. If you are using a dipole or a coax fed antenna,
| coil the feedline 10 turns (aprox dia of 5 in.) closer
| to the feed point with.
| 6. Keep cable lengths as short as possible.
| 7. If you are using other plugged in devices like
| soundcard interphases etc, unplug them and see if the
| problems reappear. My interphase gave me many
| sleepless nights until I found the pesky cable.
| Please do keep us posted on what you find.
| Good luck and best 73

Here are the Amateur Radio frequencies to monitor today during the severe weather threat that is in place through the evening hours. These frequencies will offer the best coverage:

145.130/146.640 Georgetown/Walburg
145.150/146.880 Waco
147.020 Youngsport (SW Bell County)
147.180 Clifton
147.360 Austin
146.860/444.875 Lampasas
442.950 Granger

Other frequencies that may be monitored are as follows:

146.960 Gatesville
147.320 Waco (W5TSG - local coverage)
146.820 Temple

A Tornado Watch continues in effect for most of Central Texas today. Please monitor NOAA Weather Radio, your local media, and the above-mentioned frequencies for further statements. The CTSS call KD5ZDO will be activated today.

ARCHES Project

EXECUTIVE SUMMARY

The City of Austin's Office of Emergency Management (OEM), The Austin-Travis County Amateur Radio Emergency Services (ARES) and the Austin area primary health care facilities (HCFs), working within the forum of the Austin-Travis County Interagency Disaster Council (IADC), have crafted a proposal for enhanced healthcare emergency communications in the Austin-Travis County (ATC) area. This proposal has been reviewed, accepted and is supported (in concept) by the members of the IADC including all proposed HCF participants.

Summary of ARCHES Proposal

The Amateur Radio Communications Healthcare Emergency Services (ARCHES) proposal grew out of a demonstrated need for a reliable emergency communications alternative for HCFs for both voice and data communications.

Currently ARES responds as a group of independent, trained and federally licensed volunteers in support of the Emergency Operations Center (EOC). Each volunteer must furnish and operate his or her own radio equipment.

This situation does not allow for the consistency, continuity or speed of response necessary to assure the HCFs or the EOC of reliable long-term service in the face of a protracted disaster response.

The ARCHES Proposal would establish permanent radio stations in every primary HCF in the Austin area with matching stations in the EOC and Red Cross headquarters. All equipment would be identical or compatible. ARES responders would be trained to respond to these stations and staff them for health care communications in a disaster. With such a physical system in place, an ARESDATA software system can be put in place and become operational.

Benefits to the Community:

The Austin - Travis County community will enjoy a more secure and reliable disaster response.

Costs to the Community:

No cost

Benefits to the HCFs:

1. The HCFs will achieve a level of emergency communications that will enhance their emergency management capabilities internally, intra-network, and interagency.

2. ARCHES will also help to achieve partial satisfaction of the JCAHO emergency management requirement for emergency communications.

3. ARCHES, with ARESDATA systems in place will help to unite the hospitals with OEM and other response agencies.

Costs to the HCFs:

1. HCFs will provide site identification and construction of a permanent workstation, consistent with the needs of ARES and the hospital ICS, for the ARCHES equipment and operators

2. HCFs will finance and install necessary supportive infrastructure including coaxial cable, power (red-box), telephone, network connections, lighting and ventilation, cabinetry and two office chairs

3. HCFs will provide 7/24 site security for the ARCHES station

4. HCFs will bear the costs of equipment replacement in the case of theft or equipment failure

5. HCFs will provide hospital safety training and orientation of ARES response staff to at least a basic employee intake level

6. HCFs will provide identification and access privileges for ARES staff for routine maintenance, testing and emergency response purposes

Benefits to ARES:

1. ARCHES will allow ARES to deploy large numbers of trained personnel (~80% as opposed to a current ~10% of available staff).

2. ARCHES will allow ARES to implement the ARESDATA system.

3. ARCHES will allow ARES to effectively manage the Master Casualty List and other OEM response components and enhancements.

Costs to ARES:

1. ARES (in association with the OEM) will be responsible for administration and management of the ARCHES program during design, implementation and operation

2. ARES will be responsible for "ownership" of the radio and related equipment until installation and testing are completed

3. ARES will be responsible for installation and testing of equipment

4. ARES will be responsible for the installation of ARESDATA and other necessary software components

5. ARES will be responsible for training and certifying qualified personnel to staff the stations once operational

6. ARES will develop a maintenance program and maintain the equipment in good operating condition

7. ARES will respond as needed for staffing of HCF, EOC, ARC and satellite stations

8. ARES will be responsible for the field management of the Master Casualty List

9. ARES will be responsible for the installation or coordination of future enhancements to the systems such as weather stations, etc

Benefits to the City of Austin OEM

1. The OEM will be able to have reliable emergency communications with the HCFs

2. The OEM will be able to centralize management of the Master Casualty List

Costs to the City of Austin OEM

1. The OEM will provide leadership and guidance in the design, implementation and operation of the ARCHES program.

2. The OEM will purchase (with grant monies) the radio equipment necessary for the initial implement the ARCHES program, not including supportive infrastructure.

3. The OEM will provide the space necessary for ARES to operate effectively in the EOC.

Central Texas Storm Spotters

Emergency Frequencies Available...
(All frequencies are in MHz.)

NOAA Weather Radio Frequencies*
* = for monitoring purposes, frequencies used depend on local area

162.400 162.500
162.425 162.525
162.450 162.550
162.475

Central Texas Storm Spotters Frequencies*
* = frequencies used in Central Texas depending on area

147.180 Clifton, TX: 123.0 Tone; Positive Offset (Bosque County ARC)
147.020 Youngsport, TX: 88.5 Tone; Positive Offset (Local Traffic)
146.860 Lampasas, TX: 88.5 Tone; Negative Offset (Lampasas County SKYWARN)
147.220 Lampasas, TX: 88.5 Tone; Negative Offset (Lampasas County SKYWARN)
444.875 Lampasas, TX: 88.5 Tone; Negative Offset (Lampasas County SKYWARN)
442.950 Granger, TX: 162.2 Tone; Positive Offset (Local Traffic)
444.975 Austin, TX: 162.2 Tone; Positive Offset (Local Traffic)
440.950 Temple, TX: 250.3 Tone; Simplex Crossband Repeat (Usually linked with 147.180 if necessary)
147.570 CTSS Primary VHF Simplex
446.600 CTSS Primary UHF Simplex
146.520 Nationwide VHF Simplex (per ARRL)
446.000 Nationwide UHF Simplex (per ARRL)

Other Weather Net Frequencies*
* = other frequencies used in Central Texas depending on area
145.150 Waco, TX: 123.0 Tone; Negative Offset (McLennan County ARES/RACES)
145.130 Walburg, TX: 88.5 Tone; Negative Offset (Williamson County ARES)
146.940 Austin, TX: No Tone; Negative Offset (Travis County ARES)
146.820 Temple, TX: 123.0 Tone; Negative Offset (Temple ARC)
146.660 Waco, TX; 123.0 Tone; Negative Offset (Linked with 146.820 - Temple ARC)
147.320 Waco, TX: 123.0 Tone: Positive Offset (Texas State Guard ARC)

General Mobile Radio Service (GMRS) Frequencies
* = shared with Family Radio Service (FRS) # = for assistance to travelers and emergencies

263. HT Antenna

Yahoo group: Temple_ARC
Date: 2003-11-20 11:55:33 UTC
From: KD5UBP@wmconnect.com
Topic: 263 Message: 263

From my home I was unable to "hit" the voter in Rogers or main 82 machine with my HT even with 5 watts. O.K. I live in the "boonies". Steve (Squirrble 1) came back from the Austin swapmeet last Saturday with a Comet BNC-24 HT antenna. I "borrowed" it from him and when I arrived home after coffee I slipped it on my Icom w-32-a and was able to work the 82 machine. Amazing !!. I have ordered one from AEC...Having HT problems try this antenna out.

264. A severe geomagnetic storm is in progress

Yahoo group: Temple_ARC
Date: 2003-11-20 21:39:28 UTC
From: john, ke5c
Topic: 264 Message: 264

NW7US Propagation Alert

20 November 2003 - 1500 UTC

A severe geomagnetic storm is in progress at this time. As I write this bulletin, the planetary K index (Kp) is at 7. The Aurora Index is at 10 (maximum). The Bz (horizontal component of the Interplanetary Magnetic Field) is strongly negative (oriented southward), at -55.1 nanoTeslas. This stormy geomagnetic activity is causing strong ionospheric recombination, decreasing the maximum usable frequencies on all radio link paths. HF propagation at all latitudes is poor.

This geomagnetic storm is a result of the arrival and passage of a coronal hole mass ejection from 18-XI-2003. The solar wind speed increased from 430 km per second to 750 km per second, with a very strongly negative horizontal IMF component. Whenever the Bz is negative (whenever the horizontal IMF component is oriented southward), the IMF combines with the magnetosphere in such a way as to create geomagnetic disturbances and ionospheric storms. Aurora is also a typical result of such interaction.

This geomagnetic storm is expected to continue through the end of 20-XI-2003. Additional CME arrivals may continue to keep the geomagnetic activity high.

At 0747Z, 20-XI-2003, a flare peaked at M9.6, further causing degradation of the HF propagation, on the sunlit area of the Earth. Continued C, M, and possible X flares are possible today and for the next week. The return of the major solar sunspot regions from the end of October and the beginning of November have and are returning to view, increasing solar activity.

Today's HF propagation outlook is poor. While the 10.7-cm flux is climbing, the continued geomagnetic storm will significantly degrade higher frequency propagation. The moderate to major flare activity expected will also degrade mid-HF frequencies. Nighttime propagation on low to mid HF frequencies will also suffer, as the E-layer will be significantly recombined, decreasing its MUF.

VHF propagation via Aurora, Aurora-E, and Trans-equitorial propagation (TEP) will be fair to good. I welcome reports, if any, of your success on VHF during this period.

Yahoo group: Temple_ARC
Date: 2003-11-21 01:36:42 UTC
From: Charlie Schlieper
Topic: 266 Message: 266

A new version of WSJT was released November 18, 2003. It has EME-ECHO mode, that will allow you to measure your own echos from the moon, and an improved JT44 mode--which is now called JT65. JT65 is very good for weak signals which are varying slowly, such as in troposcatter and EME work.

(from CTDXCC reflector)

There was a good 6m opening today to the east and to South America. First sigs I've heard on 6m since Oct 30th when worked 5 KH6's in a row for State #49 since starting 12/1/02. Alaska is the remaining elusive one. It started here about 1400. Worked VP9GE at 1521. Last QSO was LW3DX at 1652 using 100w IC706MKIIG and Comet Vertical at 75 ft here.

http://www.iprimus.ca/~hepburnw/tropo.html shows that Sat and Sun may be even better.

From: worksntv@...
Subject: ==>ROHN ANNOUNCES ASSET PURCHASE AGREEMENT

Rohn is the company putting up towers for Pa's 800 Mhz system.

Bob
==========

Amateur Radio and telecommunications industry tower manufacturer ROHN Industries <http://www.rohnnet.com/> has announced that it's entered into an asset purchase agreement with SPX Corporation <http://www.spx.com/>, a global, multi-industry company. ROHN filed September 16 for Chapter 11 (debtor-in-possession) relief in the US Bankruptcy Court for the Southern District of Indiana. The deal will include ROHN subsidiaries that are party to the bankruptcy proceeding.

"The asset purchase agreement provides for the sale of certain assets of the company and the affected subsidiaries to SPX Corporation for the amount of $5,450,000," ROHN said in a news release.

Through its Broadcast and Communication Systems and Services division, SPX provides analog and digital TV and FM systems, high-frequency and medium-frequency antennas, transmission lines, towers and radio frequency filter systems for the broadcast market. SPX also is a major site developer for the PCS/cellular industry.

The bankruptcy court must approve the ROHN-SPX agreement. ROHN filed an amended motion with the court November 13 seeking the court's approval of the asset sale and authority to sell the assets "after an opportunity is provided for competitive bidding." A hearing to consider proposed bid procedures is scheduled for November 25, and the bidding auction is set for December 8. The bankruptcy court is to consider approval of the asset sale December 9.

In addition to its other products and services, ROHN manufactures towers, antenna support structures and "infrastructure equipment" for the telecommunications industry. Horace Ward is ROHN's chief executive officer. The company consolidated its manufacturing operations in Frankfort, Indiana, earlier this year.

More information on the proposed deal with SPX is available on the ROHN Industries Web site <http://www.rohnnet.com/> (click on "Press Releases").

Austin SwapNet 11/23/03 de N5MNW, ARO and AARC. Website: www.AustinHams.org

Winter Weather Advisors,
Wow, strong South winds Saturday and very cold North winds Sunday made for a
very interesting weekend. Our block had lost power a few days ago and again on
Sunday. The problem was finally located to a tree limb shorting out the pole
transformer! Lori, our neighbor and I had called the tree in several months ago,
and the advise was ignored... until now. I have pictures of the scorched limbs.

/rant ON/

Apparently, Roadrunner has hired some SPAM-blocking service whose software has
blocked many emails from the ARRL's fine forwarding service. RR will not admit
anything is wrong and "...some legitimate emails may be blocked...". This is very
similar to Texas.net's blocking campaign a year or so ago.
Lori spent many hours on the phone with ARRL and Roadrunner, trying to get things
straight. Shelley Barry N1VXY (bshelley@...) was very helpful and responsive.
If you have missed or gotten bounced emails due to an ISP's mis-interpretation
of what SPAM -REALLY- is, please COMPLAIN LOUNDLY to them. Many voices need
to be heard for them to get the picture. BTW, we still get the same amount of SPAM...
Direct email to Roadrunner accounts may be more reliable-
(callsign@...)
/rant OFF/

At Dec 2nd's ARO meeting, John KG5O will be taking orders/$ for ARES T-shirts.

December:
2nd- ARO at Marimont. Presentation- Glenn KD5MFW 802.11 applications
9th- AARC Christmas Party at Fiesta Gardens Clubhouse- 2101 Bergman Ave

AARC Christmas Party Dec 9! Tickets bought <Dec 3 are $7, $10 after/at the door
Mueller's BBQ- the usual BBQ brisket, sausage, fixin's & homemade BBQ sauce.

PLUS John Muller's incredible fried BBQ turkey, so don't miss out.
Door prizes- over $1,000 worth! 2 Grand Prizes!!!
1st- Yaesu FT-1500 2 meter mobile radio
2nd- Optima Series Red Top Battery- 980 Cranking Amps- Interstate Batteries

Practice your code! QLF style, the annual QLF, sending Morse Code with
left foot contest will again be held at this years' annual Christmas dinner.
New this year...a custom made first place trophy goes to the one with the
Fastest- most-accurate fancy footwork! More on the upcoming party soon!
De Mitch- KD5HCV

The Holiday Harmony Chorus (Texas Star Auxiliary for the holiday season)
will be providing wonderful acapella "Barbershop" harmony entertainment
for the AARC/ARO Christmas Party! They practice Tuesday nights at the
Parmer Lane Baptist Church 12424 Scofield Farms Dr, just South of Scofield
Farms and Parmer Ln in Austin.
If you are a lady interested in singing harmony in the traditional
Barbershop
style, contact my Mom, Darlene at 512-392-5555 or email ds24@...,
website- www.texasstarchorus.org
If you're not an ARRL member and are considering it, AARC/ARO will apply
$15 towards your AARC/ARO club dues if you sign up for first-time
ARRL membership through the club! Take advantage of 2003 ARRL signup,
join ARRL and AARC/ARO simultaneously!

Topic: 274 Message: 275

The other side of the coin is I am extremely pleased that Road Runner is trying to block spam. Between ke5c@... and my regular e-mail, I was getting up to 75 (seventy-five) SPAMS a day. I disabled the arrl forwarding which other have confirmed is an incredible source of SPAM, and with the Road Runner filtering, my SPAM is down to a few per day. The problem isn't that your ISP is trying to help, the problem is nothing is being done to prevent the SPAM from being sent in the first place.

73, John

"Steve S. Bosshard" <bosshard@...> wrote:

-ALERT- Those of us using Roadrunner and/or ARRL.net forwarding service! Apparently, Roadrunner has hired some SPAM-blocking service whose software has blocked many emails from the ARRL's fine forwarding service. RR will not admit anything is wrong and "...some legitimate emails may be blocked...". This is very similar to Texas.net's blocking campaign a year or so ago. Lori spent many hours on the phone with ARRL and Roadrunner, trying to get things straight. Shelley Barry N1VXY (bshelley@...) was very helpful and responsive. If you have missed or gotten bounced emails due to an ISP's mis-interpretation of what SPAM -REALLY- is, please COMPLAIN LOUNDLY to them. Many voices need to be heard for them to get the picture. BTW, we still get the same amount of SPAM... Direct email to Roadrunner accounts may be more reliable-

277. TARC Banquet

Yahoo group: Temple_ARC
Date: 2003-11-26 02:43:17 UTC
From: Jim Shepherd
Topic: 277 Message: 277

EVENT----- TARC banquet
WHEN------ Thursday December 4 7:00 pm
WHERE---- Temple Meridian Retirement Center

HOPE YOU HAVE MADE YOUR RESERVATIONS

Directions to reach the Temple Meridian
Go south on South 31st St.
Pass the Canyon Creek Baptist Church on your right.
When you reach 31st Plaza you are there - look for SUIT
CITY
The Meridian entrance is directly across from Suit City
Enter through the entrance under the portico. If you like,
you may drop your passengers off under the portico then
park your car. Some parking will be available adjacent
to the portico. If that lot is full there is additional parking
on the south side of the building.

Any questions, don't hesitate to contact me.
Jim

281. April '04 Ham Expo date

Yahoo group: Temple_ARC
Date: 2003-11-26 18:18:49 UTC
From: Michael LeFan
Topic: 281 Message: 281

As some of you have noticed, the tentative date for the next Ham Expo is April 10, 2004. However, that is Easter weekend and probably is not a good schedule. Now it gets interesting: the only other date available for Expo Center reservations within that time frame is the weekend of April 30-May 1. Your thoughts?

From: Charlie Schlieper
Topic: 282 Message: 282

Passing this message along to the TARC reflector...

Charlie,

Even though Kay is the club President, I feel ill at ease emailing her.
So -- I have five Rhon 25 tower sections that I'll sell for a reasonable
offer. One of the five sections is a top section. I also have a 3 element HF
beam w/ balun (still in the box) that I might be persuaded to sell. I would
appreciate it if you would pass the word to the other club members. I don't
drive at night so I can't make the club meetings.

290. JUST OFFERING A LITTLE GOOD ADVICE

Yahoo group: Temple_ARC
Date: 2003-11-28 18:57:20 UTC
From: Kay Schlieper
Topic: 290 Message: 290

Dear Friends,

It is important for men to remember that as women grow older it becomes harder for them to maintain the same quality of housekeeping as they did when they were younger. When men notice this, they should try not to yell.

Let me relate how I handle the situation. When I got laid off from my consulting job and took "early retirement" in April, it became necessary for Nancy to get a full-time job, both for extra income and for health benefits that we need.

It was shortly after she started working that I noticed that she was beginning to show her age. I usually get home from fishing or hunting about the same time she gets home from work. Although she knows how hungry I am, she almost always says that she has to rest for half an hour or so before she starts supper. I try not to yell, instead I tell her to take her time and just wake me when she finally does get supper on the table.

She used to do the dishes as soon as we finished eating. It is now not unusual for them to sit on the table for several hours after supper. I do what I can by reminding her several times each evening that they aren't cleaning themselves. I know she appreciates this, as it does seem to help her get them done before she goes to bed. Now that she is older she seems to get tired so much more quickly.

Our washer and dryer are in the basement. Sometimes she says she just can't make another trip down those steps. I don't make a big issue of this. As long as she finishes up the laundry the next evening I am willing to overlook it. Not only that, but unless I need something ironed to wear to the Monday lodge meeting or to Wednesday's or Saturday's poker club or to Tuesday's or Thursday's bowling or something like that, I will tell her to wait until the next evening to do the ironing. This gives her little more time to do some of those odds and ends things like shampooing the dog, vacuuming or dusting. Also, if I have had a really good day fishing, this allows her to gut and

scale the fish at a more leisurely pace.

Nancy is starting to complain a little occasionally. For example, she will say that it is difficult for her to find time to pay the monthly bills during her lunch hour. In spite of her complaining, I continue to try to offer encouragement. I tell her to stretch it out over two or even three days. That way she won't have to rush so much. I also remind her that missing lunch completely now and then wouldn't hurt any, if you know what I mean.

When doing simple jobs she seems to think she needs more rest periods. She had to take a break when she was only half finished mowing the yard. I try not to embarrass her when she needs these little extra rest breaks. I tell her to fix herself a nice, big, cold glass of freshly squeezed lemonade and just sit for a while. I tell her that as long as she is making one for herself, she may as well make one for me and take her break by the hammock so she can talk with me until I fall asleep.

I know that I probably look like a saint in the way I support Nancy on a daily basis. I'm not saying that the ability to show this much consideration is easy. Many men will find it difficult. Some will find it impossible. No one knows better than I do how frustrating women can become as they get older.

However, guys, even if you just yell at your wife a little less often because of this article, I will consider that writing it was worthwhile.

Signed,
Gary

Gary's funeral was on Tuesday, November 25th. Nancy was acquitted Thursday, November 27th.

292. Club Bulletins

Yahoo group: Temple_ARC
Date: 2003-11-28 21:05:05 UTC
From: Steve S. Bosshard
Topic: 292 Message: 292

Wonder who would rather receive the Bulletin via email in PDF format instead of USPS? Printing cost would be about the same since there is a minimum quantity on each print run, but postage would save almost $5 per member per year for transmission via email.

The December Bulletin is at:

http://f2.grp.yahoofs.com/v1/ULfHPzr7Oa8SLL40prbDf_gkrlXAw36esN79uRsX5YvsfHBCH_Q_vs6frOg61l8R_PmuL2oFQno9avcsV6rb/TARC%20Files/TARC%20BULLETINS/December%202004%20Bulletin.pdf

Printed and Mailed bulletins will not be discontinued - email is just a means of convenience for some folks. Hit REPLY ALL to air your opinions.

Also many links and pages have been added to the LINKS, FILES and CALENDAR section of the reflector.

73,

steve

Hi Steve,

I just clicked on the URL provided by you, for access to the TARC December bulletin. It told me the file could not be found on the server. No password problem was apparent. So thought I'd pass it along so you can check when you can. Thanks!

Charlie

Had it moved to a sub directory - copied it back so the Bulletin is available at 2 places.

The link should work just fine now - Acrobat 5.0 or better required to read.

The APRS Web server is down for right now. I lost C drive in the computer sometime today.
So the w7kpw APRS web igate at address http://66.196.17.62:8080 is down for now.
Will get it back up as so as I can come up with another drive and get all the software installed again.

297. Temple Christmas Parade

Yahoo group: Temple_ARC
Date: 2003-11-29 18:13:36 UTC
From: Kay Schlieper
Topic: 297 Message: 297

City of Temple XMAS Parade, Monday Dec. 1.

TARC has again been asked to provide support for the Temple Christmas Parade which we have been doing for more than eight years. The parade is Mon, Dec. 1 and lasts until about 9:15 p.m.

We can use about 10-12 radio operators at various times. Line up begins at 3 p.m. from the corner of Central and 25th streets to 25th and Ave. D. About five Hams are needed for that.

About 4 p.m. about five Hams are needed to get golf carts (furnished by the City).

One ham is needed to ride w/ Jim Thigpen (the parade organizer) from about 4 p.m. until completion.

Two hams are needed from 4-6 p.m. to ride shuttle vans.

Parade starts at 6 p.m. Five hams are needed to go along the parade route to assist the parade organizer.They will be driving golf carts until the parade ends (about 9:15 p.m.)

We will use the 145.49 repeater. Tone: 123. Offset: (-). Net Control: W5LM (N5HQR).

Net Control will be located at the corner of Central Ave. & 25th Sts (Immanuel Baptist Church parking lot) and will on location NLT 3 p.m.

If you can only work couple hours, your help will be of great assistance. The city relies heavily on TARC for parade line up and control.

Tnx, Roy N5HQR

Reminder from the Calendar of Temple_ARC
http://groups.yahoo.com/group/Temple_ARC/cal

TARC Christmas Dinner
Thursday December 4, 2003
7:00 pm - 9:00 pm
(This event does not repeat.)
Event Location: Temple Meridian Retirement Center

Notes:
On December 4th, in place of our regular TARC meeting, we will have our annual Christmas Dinner. Its going to be at 7:00pm in the Dinning Hall of the Meridian on South 31st St. here in Temple. The chef is planning to serve us sliced Ham and Beef, baked potato, green beans, salad, iced tea and coffee, and pumpkin pie or carrot cake for desert. TARC members and their families are invited to come and join in the food and fellowship. We have to give the chef a count of how many to prepare for, so if you have not already made your reservations, we will need your reservation no later than Nov

311. PARKING FOR TARC BANQUET

Yahoo group: Temple_ARC
Date: 2003-12-04 16:45:45 UTC
From: Jim Shepherd
Topic: 311 Message: 311

Parking at the Meridian may be a little crowded tonight. The streets are being resurfaced so people are parking in the visitors parking area. You may park along the street near the curb and SOUTH of the main building. Please do not park in a numbered space in the covered areas. The un-numbered spaces not under the covered areas are OK. It may be best to drop passengers off under the portico and let the driver find a space.
The security entrance gate will be up until 7:30 pm, the exit gate raises automatically as you approach (SLOWLY).
Sorry for the inconvenience but maintenance has to be done.

73, Jim

Subject: Temple XMAS Parade

Kay...

We had 13 workers for the Temple XMAS Parade. The parade went very well and was completed by 8 p.m. There were 112 units this year. Jim Thigpen and the Parks Dept were highly complimentary again this year about our support.

As always there are a few actions that could have been done differently but are minor.

We had the following:
Ed N5RXD, Bill WD5ELK, Charlie N5TD, Eddie KD5UBP, Barbara Huntsman, Darwin K5DOA, Myron N5TFK, Allison Mesecke, Tony WB5TTY, Jim W5RYV, Ron W5WRE, Oscar, KD5DGJ and Roy N5HQR. Steve NU5D provided logistical support by loaning HTs and making his facilities available to us.

We Need Your Help!

Alpha Plasma Center in Killeen is donating their entire office to us....not the building but everything inside....this will include items such as general office supplies, desks, chairs, TV/VCR, TV Wall Mounts, chairs, folding tables, etc......This is an estimated $8,000 - $10,000 donation, and thus $8,000 - $10,000 of savings for the chapter. Only one catch.....we have to move everything on Monday, December 8, 2003 between 3:00 PM - 6:00 PM. We need about 10 volunteers to help us with the move. If you can donate your time, please call Matthew at 254-709-3564 or reply to this email.

Subject: [RWK] Great Deals on Used Test Equipment & Power Supplies

JDS Test Equipment is closing its doors.. Joe and his partner are

heading

into retirement. I toured their facility... lots of great test

equipment..

scopes, signal generators, analyzers, power supplies etc... HP,

Tektronix

and all the major players are represented. Everything must go... we're

talking dirt cheap. Some of this stuff may need work.. but still well

worth

the price.

Joe indicated that he would host an "open house" for some of the ham

clubs

on Saturday December 13th between 8:00 AM and 11:00 AM.

I can tell you that this would be time well spent!!

Hello all. I am an operator in Falls CO. and just found about this group from Steve the other day. My name is Rodney (KD5KQJ). I have been trying to recruit new hams in the county for a for a year with no luck. Finally I have about 12 to 15 people that what to become operators. This group is primarily made up of firefighters. This is where I could use some help. I do not know enough yet, about amature radio to put on a class and I don't what them just to memorize the question pool and get there license that way. I would like to get enough people lisenced so we can greater enhance our weather net that we currently run on our county fire repeater. We hope to also get enough intrest that we can put a repeater back in the county to help everyone else. Does anyone have any solutions?

Thanks
Rodney Hall

330. A Holiday Story...

Yahoo group: Temple_ARC
Date: 2003-12-10 21:52:12 UTC
From: km5ew_2
Topic: 330 Message: 330

For Central Texas Storm Spotters and Temple_ARC email members this is off-topic, but is worth passing on...

****

This recent true story comes from Scott Adams, the creator of the comic strip "Dilbert." His story should perhaps make all of us think at this time of year...

"Midnight, Danville California, heart pounding, sound of sneakers on pavement, sockless, sweating, adrenaline pumping. Two minutes ago I was climbing into bed. Now I'm running down a pitch-black street, full speed, fearing the worst.

"Neighbor's sidewalk, dark, don't trip. KNOCK KNOCK KNOCK. Doorbell too. DING-DONG-DING. C'mon, c'mon, wake up! There he is. Open the door. I blurt:

"THE HILL BEHIND YOUR HOUSE IS ON FIRE. I ALREADY CALLED 911!"

"Two houses alerted. The next one is the hardest. It's around the corner, nearest the blaze. Full sprint. Hope the fire hasn't reached them yet. No sirens. How long has it been since I called 911? Damn moonless night. I can't see anything but the fire, now only a patch of dry grass from the house. No lights. The occupants are oblivious, probably in bed. Front walkway is an obstacle course. Jump, guess, steps maybe. Got lucky, no sprains.

KNOCK KNOCK KNOCK.

"THE HILL BEHIND YOUR HOUSE IS ON FIRE. I ALREADY CALLED 911!"

"He's fast with the garden hose. Does that ever work? One more house, then I'll load the car for evacuation. Legs pump harder, pick it up a notch, sprint now, rest later, make a mental list of what to take, what to leave. Cats first, then unfinished Dilbert strips and art supplies. Computers. Photos. How much can the car hold?

"The firemen have my address. Have to meet them out front. Gotta hurry, but save some energy for the evacuation. Nah, forget saving energy. Full throttle. Adrenalin will compensate. Siren approaching. They're fast, maybe 5 minutes since I called. I wave my arms and point to the side street. The fire truck slows a beat, reads me and accelerates toward the fire.

"One truck. ONE TRUCK???? The whole hill is on fire. I should have sounded more worried on the phone. It's my fault if the neighborhood burns up. Okay, the arsonist's too.

"I fly up my stairs, three at a time. Quickly, survey belongings. Might not see any of this again. Pam already put two angry cats in the car; her arms are bleeding. I throw possessions in empty bins. Look out the window. I could hit the flames with a golf ball. Nothing but dry underbrush separates us. Stay calm. There's still some room in the car. Think, think. What will I miss most? What am I forgetting?

"The car is only half full. It's surprising how little I 'need' when it comes down to it. I sprint toward the fire to see who's winning. A second fire truck passes me. Now it's a fair fight.

"The neighbors gather on the street, a ragtag theater of bed- hair, pajamas, and gym clothes, chatting, comparing stories. We watch, impressed, as the two fire crews beat down the fire one square foot at a time. They don't even seem worried. A dozen dark shapes on the hill make quick work of the perimeter and methodically mop up the smaller pockets. My pulse slowly returns to normal. I unload the car and apologize to the cats.

"I often think about that fire, and about the many ghosts that visited the neighborhood that summer night. I'm sure I felt the ghosts of engineers who created a technical miracle called the phone network, that later spawned the 911 system, so I could report the fire within 15 seconds of seeing it. And I know I saw the ghosts of engineers who designed the fire equipment that allowed two small teams of firefighters to conquer a burning hill. And there were the ghosts of all the firefighters who have lived before, having bequeathed their skills and traditions to each new generation. Most notably, that night I was also visited by the ghosts of September 11th, my old friends. Almost every day they visit to remind me to be more alert, to investigate strange smells, strange sounds, as I did that night, until finding one window view that revealed the flames.

"Philosophers have many views of the human soul. In the end, it's undefined, unfathomable. The only thing I know for sure is that no one really leaves.

"Appreciate your ghosts, especially the ones you can still hug. Have a great holiday."

Scott Adams

331. The RSQ Reporting Sys for PSK31

Yahoo group: Temple_ARC
Date: 2003-12-11 02:29:16 UTC
From: Charlie Schlieper
Topic: 331 Message: 331

In the recent past, someone devised the PSB digital mode reporting system for PSK31 digital mode. It basically stood for Printability, Signal Strength, and Bandwidth. Although the intent was to improve the old RST reporting system for application to PSK31, this reporting scheme just didn't catch on very well.

Now there is a newer one, called the "RSQ" reporting system--(very similar sounding to RST), which seems easier for one to remember.

READABILITY of Text STRENGTH of Trace Amplitude
R5 95%+ Perfectly readable S9 Very Strong
R4 80% Practically no difficulty S7 Strong
R3 40% Considerable difficulty S5 Moderate
R2 20% Occasionally distinguishable S3 Weak
R1 0% Unreadable S1 Barely perceptible

QUALITY of signal:
Q9 Clean signal
Q7 One barely visible side pair
Q5 One easily visible side pair
Q3 Multiple visible side pairs
Q1 Splatter over much of the spectrum

Note that the middle and latter categories of RSQ only have ODD NUMBERS. It is intended to work that way. One through five--on READABILITY, then only ODD NUMBERS--1,3,5,7,and 9 on the rest. (Each category then having FIVE choices.)

With only the "T" in RST changing to "Q", this method of reporting seems to have a better chance of acceptability. The third letter was always "quality" in some sense, audible tone quality in the past, and now purity of signal trace quality--as received on the spectral display screen. The relationship of RSQ to RST seems to be easier for experienced Hams to relate to than PSB.

For more info, go to http://www.psb-info.net/RSQ.html
73,
Charlie, N5TD

Vol. 22, No. 49
December 12, 2003
****

==>INTERNATIONAL MORSE CODE GETS NEW ITU HOME, NEW CHARACTER

...In Geneva on December 5, the ITU Radiocommunication Sector (ITU-R) Study Group 8 agreed on the wording of a Draft New Recommendation ITU-R M.[MORSE] that specifies the international Morse code character set and transmission procedures. It also includes a new Morse code character to cover the "@"; symbol used in e-mail addresses.

Once it's made available in English, French and Spanish, the draft new recommendation will go out to ITU member-states using a new procedure for simultaneous adoption and approval. On December 3, the draft new recommendation won the approval of Working Party 8A, which is responsible for the Land Mobile and Amateur services.

Within the ITU, the international Morse code has been defined by the Telecommunication Standardization Sector (ITU-T), which is responsible for
the public telephone and telegraph network--mostly landline. A couple of years ago, the ARRL pointed out to the US delegation to the ITU Radiocommunication Advisory Group that Morse code's role more properly resides in the radiocommunication realm, not wire, and should be the responsibility of ITU Radiocommunication Sector (ITU-R).

The transfer was agreed to, and International Amateur Radio Union (IARU) President Larry Price, W4RA, proposed the draft new recommendation at the November-December Working Group 8A meeting. The draft new recommendation is almost unchanged from its ITU-T text.

"No one wanted to disturb something with more than 150 years of history," said ARRL Technical Relations Manager Paul Rinaldo, W4RI.

To keep up with the times, however, the IARU proposed adding a new character--the commercial "at" or @ symbol--to permit sending e-mail addresses in Morse code. The draft new recommendation proposes using the letters A and C run together (.--.-.) to represent the @ symbol.

While the draft new recommendation is still a working document, its expected to become a Recommendation within six months or so, pending approval by member-states.

Frequently Asked Questions
About Amateur Radio and
Broadband Over Powerline
(BPL / PLT)

by Anthony Good (a.k.a. Goody)
g o o d y @ q r p i s . o r g

Edited 2003-10-28

Q: What is Broadband over Powerline or BPL?

A: BPL is a system that is being tested to provide broadband Internet service via powerlines. Radio energy is coupled onto power lines and is distributed into homes. A device in the home plugs into a normal wall outlet
and typically provides an Ethernet connection to a computer or home network.

BPL is also known in some countries as PLT. It can also be referred to as Broadband Powerline Carrier, or just PLC, although the acronym PLC is more applicable to an older technology that is used for telemetry and control in power systems and is not the same thing.

At the time of this writing, BPL is mainly in testing in the United States and a few foreign countries. A few carriers are actually selling the service
to customers. BPL is intended as another residential broadband technology similar to DSL and Cable.

Q: Why are Amateur Radio operators, also known as Hams, in an uproar over Broadband Over Powerline or BPL?

A: BPL is a system that is being tested to provide broadband Internet service via powerlines. The system uses frequencies that will radiate into the air and cause interference to licensed services including Amateur Radio.
The frequencies BPL uses in general is 1 to 80 Mhz (megahertz). This particular band of frequencies are known as HF (which is actually 1 - 30 Mhz). This part of the radio spectrum has very special properties not found elsewhere. With this band, one can communicate around the world with very minute power levels. This is due to the fact that radio waves in this band can bounce off the ionosphere multiple times to get to the destination. Other portions of the radio spectrum are essentially line-of-sight. This means that the signals cannot bend or bounce off the ionosphere, but they can only propagate like light - in a straight line.

Q: What is technically wrong with BPL?

A: The medium of BPL (the powerline cable), unlike any other broadband medium (copper twisted pair, fiber, coaxial cable), is inherently unsuited for carrying the frequencies BPL uses. In fact it naturally abhors them, much like nature abhors a vacuum. Power lines, copper twisted pair, and coaxial cable all act like natural low pass filters, meaning higher frequencies are attenuated more than lower frequencies when attempting to transmit them through the medium. The exact slope of the graph of attenuation depends on the specific construction of the material, but in general, twisted pair is suitable up to 100 Mhz and coaxial cable can go up to about 3 Ghz. Again, these are very general figures and determining the suitability for any application depends on other factors. Power lines would be suitable for up to perhaps 20 Khz, maybe 350 kHz at a stretch, with caveats. The exact figure is unimportant for this discussion, but note that this is kilohertz, not megahertz or gigahertz. These are essentially audio frequencies, and equate to a data rate in the neighborhood of ISDN.

The other property of the medium chosen for BPL is its radiating capability.
Again, unlike all other broadband mediums, power lines are excellent radiators of the frequencies BPL uses. Copper twisted pair, coaxial cable, and fiber are all inherently non-radiating mediums. It should be noted that twisted pair and coaxial cable do actually radiate to some extent, but in proportion to the amplitude of the signal they are carrying, it is minuscule. (This doesn't apply to poorly designed or maintained cable or pairs, or intentionally radiating cable like Radiax used for indoor applications). It's ironic that an antenna in use by some Amateurs called a rhombic actually is very close in construction and visual appearance to typical power lines. Amateurs have often joked through the years that they would have excellent signals if they could only use the power lines in front
of their homes for antennas.

No electrical engineer in his right mind would unleash a technology that puts 80 MHz of RF noise and modulated carriers on an unshielded, lossy, radiating medium. Basic first-year college courses teach one this. This is very, very basic. The electrically dirty and unpredictable nature of power lines will also produce harmonics and intermodulation that will cause unexpected forms of interference.

Q: Does BPL work?

A: From a consumer point of view and what has been heard from test areas, yes. Neither I nor the majority of the Amateur community disputes this. The scalability of each of the systems remains to be seen, though, as there are few if any heavily loaded systems. However, one would expect the behavior of
a BPL network to resemble that of a shared medium like cable or wireless. Systems will have to be segmented further as traffic grows and the available
bandwidth in a segment decreases.

There are significant concerns about immunity to interference which I discuss further later in this document. The effects of such interference are
unknown at this point and could make BPL service in areas unreliable or unfeasible.

Q: Why can't BPL coexist with wireless technologies?

A: To allow a wired-based network to make large portions of frequencies unusable in the RF world is tantamount to allowing human rights atrocities to occur. Cable companies use frequencies in VHF and UHF bands that were they to leak out into the outside world, would wreak havoc with aviation and
public safety frequencies. They are subject to strict radiation limits, and there's no reason why any other wired network like BPL shouldn't be subject to strict limits - it's a wired medium, it shouldn't affect wireless media in any way.

Q: Is BPL new?

A: BPL has been tested and deployed on a limited basis in other countries and was essentially rejected due to interference issues. BPL vendors may claim "new technology" and advances have now made it possible, but the fact is they can't change the laws of physics. High speed data must occupy a certain amount of "bandwidth" and power lines which were designed to operate
at 60Hz will radiate RF that is applied to them. Only changing power line construction (i.e. coaxial cable) would eliminate this radiation. BPL proponents reject this as being too costly, but that would be the cost to make this a real viable technology.

Q: Hasn't Power Line Carrier or PLC been in operation for years without problems?

A: The "original" PLC is a very low frequency, narrow bandwidth signal used for control equipment in the power grid. It is in the neighborhood of 100 to
180 kHz (that's kilohertz, not megahertz). It is not intended for high speed
data transfer, but rather simple commands, like "turn relay on", "turn relay
off". It is also used to send "messages" up the line when a major failure occurs so that other network elements don't trip off when senses a fault. This keeps the power grid from falling down like a bunch of dominoes (like what happen recently with the blackout in the Northeast :-).

Usually people refer to the 1-80 Mhz "PLC" as BPL, although some use the acronyms interchangeably and in my opinion, wrongly. Comparing "original" PLC and BPL is like comparing apples to oranges. PLC is brief, primitive commands and is very narrow banded. BPL is wide band noise that's all over the place.

Recently the Amateur Radio community petitioned the FCC for a low frequency band in the same area as the original low frequency telemetry PLC. It was rejected by the FCC because utility companies complained that Amateurs would
interfere with this telemetry PLC. This is very interesting for several reasons. First off, the utilities are saying that BPL won't interfere with Amateurs and Amateurs won't interfere with BPL. But PLC is arguably more robust than BPL because it's narrow band. So which way is it ? The second reason this was so interesting (or disturbing) is that telemetry PLC is operating under Part 15 and is afforded no protection from interference from
licensed services. For the first time the FCC disallowed licensed operation and essentially protected a Part 15 operation. This sets a dangerous precedent as any unlicensed "spectrum squatter" can later claim rights to a chunk of frequencies. The third and even worse observation is that the utilities have admitted that the telemetry system of the national power grid
is vulnerable to attack, and they've based a critical part of the infrastructure on something that cannot be legally protected from interference. Any nutcase with a little knowledge could conceivably control network elements within a power grid with enough time and money.

PLC has been in operation for a long time, but as I mentioned, it's very different from BPL. It seems many BPL proponents are confusing the situation
by riding on PLC's history and merits. Their recent defense of "original" PLC with the FCC also illustrates their lack of understanding of Part 15.

Q: Won't adaptive technology in BPL protect others from interference?

A: Adaptive algorithms make note of where interference is spectrally located
(i.e. other services transmitting) and avoids using these frequencies. In this case they actually enable self-preservation and not protection of other
services in the band. Interference is most always a two way street and BPL will be very susceptible to interference from licensed services. This especially includes Amateur Radio due to it being prevalent in residential areas. Adaptive technology does not protect receiving stations at all like TVs, AM radios, public safety repeater inputs, and weak signal receiving stations because these users of the spectrum can't assert their need for a clear frequency by transmitting a signal to be detected by the adaptive technology. So, adaptive technology is really a necessity to increase the performance and availability of BPL service to customers and isn't a silver-bullet solution to interference.

Q: If this just affects Ham Radio, why should anyone care?

A: BPL will also affect other licensed services such as government agencies , military, aviation, maritime, public safety, and shortwave broadcasts. Ham
radio occupies less than 10 percent of the affected radio spectrum.

Q: Are Hams qualified to talk about BPL issues ?

A: Hams are licensed by the FCC in the United States and various governing bodies in most every country in the world. Most countries have several classes of licenses. In the United States and most countries, one must pass written tests on electronic theory, communications protocol, and regulatory material. While becoming a licensed Ham isn't equivalent to an Electrical Engineering degree, many hams have formal educations in electrical engineering.

The experience and knowledge of Hams can vary greatly, and like any hobby or
profession, there are hams who spout off without knowing what they are talking about. Occasionally you will find an ex-ham dismissing Ham Radio as being dead, or an inexperienced Ham who only uses VHF bands who could care less about the HF bands that are threatened by BPL. Most active hams though are rather knowledgeable.

Q: Why are Hams the only people talking about the negative affects of BPL? Why aren't other services complaining?

A: Ham radio occupies a minority of BPL spectrum, with government, shortwave, public safety, and ship communications occupying the majority. Ham radio operators are the most vocal because government agency employees quite simply don't post in Internet forums.

Q: Can't Hams and others using the spectrum simply be relocated?

A: Users of the affected spectrum cannot be relocated, or at least not economically or in a timely manner. It would be cheaper for the government to subsidize cable and DSL deployment. Plus, all of the services that use HF
bands require the characteristics that only HF bands exhibit. There would also be huge international treaty implications with any relocation. Changes in international communications treaties are measured in decades, not months
or even years. Relocating government and military services alone would take years as the FCC would have to structure a migration plan. Chances are it would be ten years before this could be completed and it's likely that power
companies will have run fiber to the home or DSL and cable will finally be ubiquitous. Perhaps the largest issue to tackle, though, is where to move these services in what is an already overcrowded spectrum.

If it was determined that relocation was the way to go, this would be very irresponsible as HF radio bands are a unique natural resource. No other radio spectrum can provide worldwide communications without any supporting infrastructure (i.e. satellites).

Q: Won't Frequency Notching protect licensed services?

A: Frequency Notching is a new feature that is reported on some of the second generation BPL systems. (I've heard MainNet uses this). The idea is

that if a BPL signal is interfering, the system can be configured to not use
this frequency or a band of frequencies. This apparently can be done on a subscriber, network, or system wide basis. While this is a nice feature, it still doesn't make BPL acceptable for two reasons. The first of which is that the possibility of intermodulation still exists. (Intermodulation is described in detail below). The second reason is that BPL signals can propagate for very long distances due to the characteristics of the frequencies they are using. Interference from a BPL could be experienced a thousand miles away. Tracking this interference down so that the BPL operator could be informed of a Part 15 violation in order to get them to notch the frequency would be logistically difficult. Considering BPL acts like a large distributed antenna and not a classic point-source of interference, it would be hard to direction find the signal to track it down. The third issue is what's called the noise floor. The noise floor in simple terms is what you hear in between radio stations on an FM or AM radio. It's the snowy screen you see on your TV when there's no station on the channel. The noise floor is essentially noise and radio spectrum energy left over from the Big Bang. This noise is fairly constant, but man-made noise sources such as existing 60 Hz power lines, noisy transmitters and other things contribute to raising the noise floor. BPL systems will contribute to the noise floor and raise it higher. This will make it more difficult to receive weak signals. Taken to the extreme, the raised noise floor could make HF communications impossible.

Q: What is intermodulation?

A: Intermodulation is the mixing of radio signals which produces new radio signals. Think of it as radio waves having children. But just how do radio waves have children ?

This mixing is caused by what are called non-linearities. One non-linear electronic component that you find in most any electronic device is a diode.
When multiple radio signals are run through the diode, they mix together. Let's say we have a 4 Mhz signal and a 6 Mhz signal going into the diode. We
would then get:

4 + 6 = 10 Mhz

6 - 4 = 2 Mhz

4 and 6 Mhz had two "children", 1 and 10 Mhz !

Now, non-linearities are usually good. This phenomenon is used in just about
every radio device to either create a signal to be transmitted, or receive a
signal that you hear or see. But, non-linearities can occur where you don't want them and then in causes problems. One such place is in power lines. Bad, corroded connections or dissimilar metals touching can create natural

diodes that act like mixers and produce this intermodulation.

So, let's take a BPL signal and for the sake of discussion, say it's a grossly simplified consisting of radio signals at 1, 5, 8, 9, and 12 Mhz. Some of the intermodulation products that could be created would be:

1 + 5 = 6 Mhz

8 + 9 = 17 Mhz

9 + 12 = 21 Mhz

12 - 9 = 3 Mhz

But you could also have what is known as third order products:

1 + 9 + 12 = 22 Mhz

8 + 9 + 12 = 29 Mhz

8 - 5 + 12 = 15 Mhz

Or even:

2 * 12 = 24 Mhz

(9 - 5) * 12 = 48 Mhz

You can do the math and figure out each permutation, but you get the idea. If we took a real BPL signal that has signals from 1 - 80 Mhz the number of products and where they would fall are mind-boggling. The resulting intermodulation products in a system could extend well above the band BPL proponents want, falling into FM broadcast, VHF TV, Aeronautical, and more public safety bands. This is just another reason why BPL is so problematic.

It's arguable that such non-linearities in power lines are exhibited as arcing connections, something that most power companies are actively searching for these days as the RFI (radio frequency interference) effects are well understood. These maintenance issues will be addressed quickly by well run utilities. However, non-linear loads are common in homes, light dimmers being the first devices that come to mind. Theoretically, these devices could create intermodulation that would in turn be radiated by the house wiring and outside power cabling.

Q: Isn't ham radio on the decline?

A: Ham bands are not deserted and ham radio is not dying. Ham radio has more
licensees than ever. Ham opponents post comments that every time they've listened to ham radio, it's been dead. You never hear any details. Was it HF, VHF, UHF? Were they listening on a band that is subject to the effects of propagation which change based on time-of-day and solar conditions, and were just listening to a band that was dead due to radio conditions? They don't know. But in this online world, anecdotal evidence carries as much

weigh as a ten year study. It should be noted that on many weekends, it can be difficult to find an open, unused frequency on several HF bands. Statistics on the number of ham radio operators in the world is here .

Q: Isn't ham radio obsolete?

A: Depends on what you call "obsolete". Hams use numerous modes including CW
(Morse Code), Voice (AM, FM and Single Sideband), Video (analog slow scan and fast scan), and data (RTTY, PSK, MFSK, Spread Spectrum). Morse code has been around since the beginning of radio and still thrives as a nostalgic part of the hobby today. Other Hams experiment with cutting-edge modulation techniques, while others prefer older modes. Many Amateurs build their own equipment from scratch.

Electronics engineering basics such as antenna design, modulation techniques, amplifier design, filter design, and transmission line theory never really change, and in Amateur Radio you can learn about these and actually see them in action, and not just read about it.

While Amateur Radio in general isn't "cutting edge" like it was in previous years, it provides an educational foundation for engineers who will be designing cutting edge technology in the future in the professional world, so to dismiss it as "obsolete" is misguided and narrow-minded.

Ham radio also provides emergency communications services in times of need.

Q: In a disaster when the power goes out, BPL goes out, but so does Ham Radio as well. So what use is Ham Radio in a disaster?

A: Amateur Radio operators pride themselves in emergency preparedness and many are equipped with significant emergency power capabilities and portable
low power equipment. There's an annual event called Field Day in which this emergency preparedness is exercised and improved.

Q: But cellular provides disaster communications, so why is ham radio needed?

A: Cellular networks rely on telco facilities to deliver calls to cell sites. Many carriers do use Part 101 point-to-point microwave instead of telco facilities, but this has largely given way to telco facilities especially in core metropolitan areas where cell densities make microwave prohibitive. So cellular networks are often subject to the same negative impact as wired telco facilities. Additionally, during a disaster, if a portion of the cellular system remains in operation, many times it is so overloaded that it is nearly useless. While ham radio can't carry an onslaught of phone calls, it is useful in delivering messages across the country and world. Some of these messages may be a simple "I'm OK" type message from one family member to another and seem insignificant. But, if you've ever been in the situation on the other end waiting, you know such an

insignificant communication is priceless.

Q: If the power goes out in an area, BPL interference will go out as well, so Hams could then provide emergency services, so what is the problem?

A: Amateurs need to maintain equipment and practice needed skills before a disaster occurs. If the equipment is unusable during regular times, what is the motivation even to buy equipment? Another thing to consider is that emergency stations need to be able to communicate out to areas that do have power.

Another issue to contend with is the propagation characteristics of the HF band which BPL is using. Interference could travel thousands of miles. I doubt anyone will want to track down interference a thousand miles away when
a hurricane has just flattened their state.

Q: Are the American Radio Relay League or ARRL and/or Hams shills for the telcos, cable, and other commercial interests?

A: Hams are individuals like you and me. The ARRL is non-profit and represents ham radio in the US. The Baby Bells are well funded but would have a hard time buying off 700,000 Hams. They are interested in stopping BPL due to business issues and Hams could care less about this.

Q: But BPL complies with FCC Part 15, doesn't it?

A: BPL compliance with Part 15 is meaningless. Part 15 basically states that
the unlicensed device must generate no interference and accept all interference from licensed services with no recourse. Power companies in general have a particularly poor record in responding to interference from their existing 60 Hz power transmissions. The FCC is enthusiastically seeking comments on relaxing Part 15 to encourage BPL. BPL vendors know that
they can deploy BPL right now under Part 15, but they know widespread deployments will open a Pandora's box of interference complaints. Even if they are Part 15 compliant, they will have to cease operation if the network
is interfering.

BPL vendors have proudly released press releases stating Part 15 compliance,
as if this proves evidence of no interference. This is simply PR fluff as it
merely means measured signal emissions are within mandated limits. In the HF
bands, the emissions limit is 30 uV/m (microvolts per meter) at a distance of 30 meters. It's not important to know exactly what this means, but know that this signal level will cause interference in any well designed HF radio
equipment. Once interference is detected, the second clause in Part 15 goes

into effect, and the system must cease operation regardless of compliance with the mandated emission limit.

Part 15 compliance or certification should not by any means be considered a milestone for product success or investment.

Q: BPL is being tested in several areas. Shouldn't the negative affects be seen in these test areas?

A: BPL tests in the United States haven't been widespread enough to understand fully the implications. Experiments have been mostly on a street or city block level. Judging by the recent FCC Notice Of Inquiry filings from BPL proponents, little if any measurements have been taken.

Q: If the interference problem is not solved and this is deployed, what will
happen?

A: If BPL is deployed in its current state it will be a mess for both sides.
The FCC will be inundated with interference complaints which will stress its
limited resources. Customers of BPL will experience unreliable service due to interference in many areas. Utilities will become frustrated with trying to troubleshoot the service problems and will undoubtedly lack the equipment
or expertise to identify interference ingress into their system. Ultimately investors in the technology will lose out as well. It's a losing proposition
all around.

Q: Won't BPL create more "effective bandwidth" out of what limited resources
we have?

A: BPL is a wired network impacting wireless radio spectrum. Wired networks are intended to do just the opposite - not impact wireless frequencies. One wouldn't run a wire to a car or SUV to provide mobile phone service to that vehicle. And deploying BPL actually exacerbates the ongoing radio spectrum congestion problem, and does not create any additional "overall bandwidth" in the world. And as I mentioned before, relocation of existing services in the HF band is a very, very monumental task taking years of work and substantial costs that have not yet been identified.

Q: How else can power companies get into broadband? Isn't this their only choice?

A: Power companies should be building for broadband dominance in the coming decades and beyond with viable technology like fiber, not for the next year or two with doomed-for-obsolescence technology. If the utility companies are
in a frenzy to get their proverbial "foot in the door" before telcos and

cable companies snatch up their potential customers, fiber delivery to the last mile and 802.11 wireless on poles for the last 100 feet makes a ton of sense. This is not a new idea and some carriers are doing it now.

Q: Doesn't the need for broadband outweigh the needs and value of ham radio and other services using the affected spectrum?

A: Destroying a large portion of wireless spectrum is not justifiable because it benefits more people. There are many examples of this in society where reallocation of a resource would benefit more people, but it would be detrimental long term to the people and the resource itself. Right now, amateur frequency allocations belong to the people internationally. You can enjoy them by simply passing a test and getting licensed. Once they are given to a business interest, they cease to be yours and you can only use them as a customer of that business. BPL impacts other groups including government, military, shortwave, aviation, maritime communications, and CBers, so this would have national security and international implications as well. BPL has been linked in some rhetoric with increasing "homeland security". BPL in fact takes spectrum away from government agencies directly
tasked with protecting the country. So in summary, allowing BPL will ultimately benefit a few utility companies, not the people.

Q: Why would anyone propose a broadband system that isn't viable?

A: Potential revenue, an FCC that is very pro-big business lobbyist friendly
and technically lacking, a high demand for broadband from a starving public,
and the classic promises of broadband (i.e. hype) are driving BPL.

Q: Why have BPL proponents (like the APPA) stated that the responsibility of
proving interference is that of its opponents?

A: BPL proponents have claimed interference is not an issue, but haven't put
in any hardcore measurements into their NOI filings (that I'm aware of at this writing). Either the measurements haven't been taken by them, or they have them and are withholding them. In selling a technology or anything to investors, regulatory agencies, or the general public, one normally is more than happy to provide supporting data to defend a proposed product, so this is puzzling to say the least. Unfortunately it will be up to opponents to spend considerable time and expense taking measurements that the BPL industry should have done in the first place and submit them to the FCC.

Q: Won't BPL give me cheaper broadband?

A: Perhaps, but the costs to deploy BPL are still there. Repeaters and the BPL equivalent of DSL DSLAMs will need to be deployed. BPL promises to deliver broadband in areas that cable and DSL don't so there will be no competition to drive down prices. The costs to deliver to these less

populated areas will be higher, so the motivation for low prices in these area is absent. But it's likely BPL will be deployed exactly where cable and
DSL is now because that's where the revenue is.

Q: What is 802.11 / WiFi / 2.4 Ghz / 5 Ghz High Speed BPL?

A: This is a recent development which uses frequencies at 2.4 Ghz or 5 Ghz and not HF frequencies. It should not interfere with licensed services such as Amateur Radio in 1-80 Mhz. Amateurs have a secondary allocation at 2.4 Ghz, but have been living fairly harmoniously with unlicensed 802.11 operations there. The propagation of 2.4 and 5 Ghz is much, much different than that of HF. Such frequencies will travel only a couple miles and is strictly a line-of-sight. HF spectrum can travel around the world with only milliwatts of power making any BPL operations in this band dangerous.

I have my doubts whether this high speed BPL will actually work, but as far as interference concerns, I have nearly none. The BPL that occupies 1-80 Mhz
is a train wreck technologically and will be a disaster for everyone involved. The FCC and investors should be looking at this high-speed BPL and
quite simply trash HF BPL as a bad idea that looked good drawn out on a napkin after five drinks at the company Christmas party. If they can make it
work and it's strictly 2.4 or 5 Ghz, I say have at it.

Q: What is the technological basis of 802.11 / WiFi / 2.4 Ghz / 5 Ghz High Speed BPL?

A: The creators of this system are taking advantage of a technique perfected
by Georg Goubau, more commonly known as G-line. A good web page describing G-line is here . Ironically, a Ham, George Hatherell (ex-K6LK or SK ?), wrote about G-Line in a 1974 QST article entitled Putting the G Line to Work.

Q: Do you think WiFi / 5 Ghz BPL will work?

A: G-line, the discovery that this BPL is based upon has one troublesome requirement - the cable must be coated with a dielectric, like a low-loss plastic. Most power lines are bare conductive metal and coating or replacing
all of these is a rather difficult and expensive undertaking. Also, the cable used in G-line cannot have sharp bends, otherwise the microwave energy
just floats off into space.

If this is used like a radiating line with the "drops" to houses being wireless rather than conducted RF on the line, this may just work. Considering the effective radiated power limit in the upper 5Ghz band is four watts, a 5 Ghz BPL system could use significantly more power than a

low
speed HF system, reducing the need for repeaters.

Q: Won't 802.11 / WiFi / 2.4 Ghz / 5 Ghz High Speed BPL interfere with UNII band Wireless ISPs , 802.11 indoor wireless LANs, or 2.4 Ghz or 5 Ghz cordless phones?

A: This could have the potential to interfere with existing 5 Ghz UNII band operations such as wireless ISPs (WISPs). However, all of these devices are on equal regulatory footing as they operate under Part 15 rules. Something to consider, though, is the nature of 2.4 and 5 Ghz signals. They do not propagate like HF signals that the low speed BPL uses. This is microwave frequencies, so it propagates much more like light - in straight waves, or line-of-sight. So any radiated emissions could be expected to be stopped or severely attenuated by vegetation and buildings in short order. I'd suspect that indoor wireless LANs could easily overcome any emissions from such a system, and wireless ISPs using directional antennas would not have problems.

Specific to 5Ghz, there are three bands which we'll call lower, middle, and upper. The lower band is strictly for indoor use due to some legacy government applications in this band. 5 Ghz cordless phones and 802.11b wireless LANs operate in this band. Any outdoor BPL would operate in the middle and upper bands, so interference for 5 Ghz consumer devices should not be an issue.

Q: Why have so many people attacked Ham Radio in forums ? Why does the information above conflict with what people have told me in forums?

A: There's a vocal minority of uninformed people who want broadband Internet
in the worst sort of way and are willing to dismiss anything they are unfamiliar with or unaware of, or if it simply doesn't affect them. The Internet has created this world of anonymity where ignorance and anecdotal evidence with no supporting facts is taken as gospel. When forum debaters can't attack the evidence, they attack Ham Radio. Before you take the word of someone online with an AOL-like screename spelled in hacker language (733t H4X0r spe4k), listen to the people who are licensed and understand what
they're talking about.

Q: Many major discoveries and inventions throughout history first met with failure. Determined scientists and inventors who ambitiously pursued their goals ultimately triumphed and were able to succeed and produce products that benefited the public. Perhaps BPL is in the same category ?

A: The invention of BPL isn't quite on the level of the discovery of plutonium or the invention of the telephone. The radiating characteristics of conductors were discovered a century ago and the concept of carrying radio frequency on power lines (also known as Carrier Current and described below) has been in use for decades.

One could argue that perhaps BPL engineers have discovered some new phenomenon that changes the laws of physics. I'd counter that if they did, there'd be numerous papers in the scientific community describing the phenomenon, and the applications of a such a discovery would have much, much
more lucrative applications beyond BPL.

Q: Couldn't Hams use power lines as antennas?

A: Technically anyone can as long as they operate under Part 15 rules. This concept is called Carrier Current and is used by some unlicensed (legal) AM broadcasters. This is done by injecting very low power radio frequencies into the line. The difference between classic Carrier Current and BPL is that Carrier Current uses one distinct frequency, typically a standard AM channel. BPL is wide band in nature and uses several megahertz. Note that the entire reason someone would use Carrier Current is that the power lines radiate the signal, acting like a distributed antenna - something many BPL proponents claim just doesn't happen. If Hams used power lines as antennas with typical Amateur power levels, the results would be disastrous with massive interference to many residential devices.

Q: Won't BPL radio energy on power lines be detrimental to people ?

A: No, the low power levels that BPL uses will not have detrimental biological effects.

Q: People who already have broadband Internet oppose BPL because they don't care about the people who don't have any broadband choices. (Statement, not a question.)

A: Hams are people like you. Hams want broadband just as much as anyone else
and the same percentage of Hams as the general population are dealing with the same lack of broadband Internet. You don't see Hams standing up and blocking cable or DSL deployment, so to say that this is entirely a movement
of people who don't care about "broadband challenged" citizens is just plain
wrong and perhaps one of the stupidest arguments I've heard to date. The movement against BPL is strictly technology based.

Q: Hasn't FCC Commissioner Powell stated/mandated than any broadband pipe to
the home is welcome?

A: Powell is a politician and broadband is a hot button topic for many Americans. He will earn considerable points if he could deliver broadband. Whether you're a Democrat or Republican, liberal, moderate, or conservative,
you have to recognize the political realities of the current FCC administration. They are Republicans. Republicans don't support regulation, and won't take the necessary steps to subsidize/fund/mandate/encourage DSL, Cable, and wireless deployment in the boonies. On the contrary, Powell has

worked to preserve these monopolies. Additionally, the Bush Administration is very pro energy business and pro big business, so electric utilities and their lobbyist organizations are calling the shots with the FCC.

Q: Won't BPL be different than Cable and DSL and deliver broadband to those who don't have it, especially in rural areas?

A: If you don't have broadband now, there's probably one good reason - lack of sufficient revenue in your area. People are mistaken in thinking that BPL
providers are going to go out of their way to deliver BPL to country folk, as if this is some kind of humanitarian effort to get the country on the 'net. It's not. Companies are in business to make a profit, plain and simple. Being a good corporate citizen in a community makes great press releases, but such efforts stop when the bottom line is affected.

Let's talk about the differences and similarities between Cable, DSL, and BPL for a moment. Cable requires a unit at the origination of the cable system, also known as a headend. This unit is expensive, but can service hundreds to thousands of customers. The cable system is already built with repeaters for the video part of the system called amplifiers. So the major investment for cable is at the headend, and service can be delivered basically anywhere cable already is deployed. The upstream Internet network must be brought to a single point, the cable headend.

DSL is based out of telephone central offices using a device or peripheral called a DSLAM. Like a cable modem headend unit, it can provide service to hundreds of customers. DSL service can be provided about 18,000 feet from the DSLAM. This has severely limited DSL deployment. There are no repeaters for DSL. As with cable, the upstream Internet network must be brought to a single point, the central office. Any ILEC or CLEC probably already has significant Internet bandwidth available at any central office serving business customers.

BPL service is provided by a DSLAM/Cable headend type device, but its effective distance is 200 meters or 656 feet. Every 200 meters a repeater must be used to regenerate the signal. BPL service can't really be distributed from a central point like Cable or DSL, so the upstream Internet
network must be backhauled to each BPL feed point via telco facilities such as fiber or copper.

So to deploy BPL an up front investment must be made in BPL headend/feed point equipment and repeaters. There's going to be significant recurring costs in backhauling the IP traffic from the numerous BPL feedpoints serving
an area. Neither DSL or Cable has this recurring cost or need for multiple network origination points. These costs unique to BPL make it even less attractive for deployment in rural areas that Cable or DSL as customer densities and revenue potential is lower. While it may be stated by BPL providers that initial metropolitan buildouts are needed to subsidize rural deployments, why would any for-profit company expand into rural areas when

it's a losing proposition?

Q: Is there a way that BPL could be made to work?

A: This is strictly my opinion, but here's my thoughts:

1. Limit all BPL deployment to underground cables.

2. Confine BPL to a set, dedicated band of spectrum, perhaps 1 Mhz of spectrum that will have the least impact to all licensed services.

3. Set installation acceptance regulations that specify measurement standards and mandate periodic measurements and record keeping.

4. Set out of band spurious emissions limits to an acceptable level to all licensed services. This would need to be much more stringent than the current 30 uV/m at 30 meters limit in Part 15.

5. Set the in band emissions limits to an acceptable level, although less stringent than the out of band emissions above.

6. Require equipment certification beyond Part 15 for all BPL equipment.

7. Add additional language to Part 15 to apply appropriate emissions limits to broadband devices operating on HF frequencies.

I haven't fully developed these guidelines, but I'm basically saying that BPL shouldn't be a Part 15 device because it doesn't fit the historical Part
15 "mold". I think a new section in Title 47 needs to be created to accommodate it as its effects could be widespread. Part 15 was meant to allow devices like cordless phones to operate, not for telecommunications companies to create regional networks supplying services to thousands of customers.

Some may argue that Part 15 has done its job over the years, despite the rather loose emission limit, but I'd respond that BPL isn't your typical Part 15 device. 30 uV/m at 30 meters is great when you're dealing with a single point source, but not for large distributed antennas run by large corporate interests with questionable response times to interference complaints.

Q: Why don't the utilities just bury all the power lines to lessen interference?

A: If digging up the entire country for power line burial would be an option, it would make better sense to just run buried fiber everywhere. Fiber has so much, much more bandwidth compared to BPL it would be frivolous
to go through such a drastic project just to bury cabling that can ideally carry only 100 kHz of bandwidth.

Q: Shouldn't Hams be responsible for coming up with an alternate broadband solution?

A: Hams are merely the messengers, or the "canaries in the mine" as I like to say. Hams cannot use their spectrum for commercial purposes, so designing
an alternate over-the-air technology using ham frequencies is out of the question. The responsibility of providing a broadband solution over power lines or other mediums is not their responsibility as some have suggested. BPL is a technology dreamed up by commercial interests with profits in mind.
Some who have delusions that BPL is a humanitarian effort to deliver the Internet to huddled masses of rural folk starving for bandwidth are overly idealistic and unrealistic. This is a business with one thing in mind - revenue.

Q: Why don't Hams work to help solve the problems of BPL they claim exist?

A: At the time of this writing, the ARRL is assisting several BPL manufacturers at various levels. Some have been more cooperative or welcoming than others. I suspect some fear ingress interference from higher powered Amateur stations, and are cooperating with their interests in mind.

I personally would have no problem with helping a utility or a BPL vendor take measurements and I'm sure others would volunteer. I doubt anyone in the
Amateur community would be interested in improving the BPL product though, as its foundation is considered too weak to make it work. I also wouldn't want my volunteer time to contribute to the coffers of a corporation.

Q: What is the next step with BPL?

A: Currently BPL can be deployed under Part 15 of the FCC rules if it complies with emissions limits. The FCC is considering the Notice of Inquiry
comments and is awaiting extensive measurements from the NTIA. The next logical step after a Notice of Inquiry is a Notice of Proposed Rulemaking or
NPRM. This would outline pending legislation and solicit comments. Following
that, the FCC would normally release a Report and Order or R&O. This would order changes to the Code of Federal Regulations Title 47 which would place into law whatever changes were made.

The FCC could chose to do one of several things at this point (in my opinion):

1. Do nothing.

2. Place BPL in a different regulatory category or eliminating the loopholes
in Part 15, limiting or eliminating BPL deployment.

3. Place BPL in a different regulatory category and give it precedence over other Part 15 devices and some protection from other services.

4. Relax Part 15 to allow greater emissions.

Q: What are your qualifications?

A: I currently work in IT at a regional ISP. I have experience in RF engineering in HF, VHF, UHF and microwave frequencies. I've deployed unlicensed Part 15 wireless Internet services and I'm an avid Amateur Radio operator who builds equipment and enjoys QRP (low power) operation and CW (morse code). I am President of a local Amateur Radio organization and a member of the American Radio Relay League.

Thanks to Art, KC2G, for proofreading my work. Thanks to Gary, N0JCG, for contributing information on G-line.

346. DIGTRX 1.28 - December 19, 2003

Yahoo group: Temple_ARC
Date: 2003-12-19 19:13:08 UTC
From: Charlie Schlieper
Topic: 346 Message: 346

Merry Christmas to all Amateurs...

A new version of the exciting RDFT program, DIGTRX, was released on December 19, 2003. Digitrx version 1.28. URL is http://planeta.terra.com.br/lazer/py4zbz/hdsstv/digtrx128.zip (RDFT is "Redundant Digital File Transfer")

DIGTRX was written by Roland Zurmely, of Brazil.
It requires five external RDFT support files, also available at the same site, which were written by Barry Sanderson, KB9VAK. (RDFT2.zip, RDFT202a.zip, i.e.)
The five support files are:
2tone-12.wav
bin2sym.exe
flt2wav.exe
modpm.exe
wav2bin.exe

Digtrx requires proper audio levels, and good linearity of response from 460 Hz to 2300 Hz. Two neat WAV files that can help linearity checks and adjustments are: 2tone-x.pmw.wav and sweep.pmw.wav
(or 2tone-x.wav and sweep.wav if not precoded form) The two tone reverse sweep is unique in testing the waterfall.
These files are available on David Jones website, listed at the bottom of this posting.

An old win application problem for anyone using DIGTRX with Windows 98 or ME can easily be solved. These Windows platforms leave WINOLDAP's stuck in the background which can quickly eat up your computer resources. After Digtrx calls on an RDFT application in it's program, you can check on this potential problem by clicking CTRL-ALT-DELETE once. All of my Windows 98 systems quickly filled up with these items. To correct this from happening, do the following steps:

1. Open Windows Explore
2. Select the DIGTRX folder
3. Right click on RXZBZ.BAT
4. Select "Properties"
5. Select "Program" tab
6. Check "Close on exit"
7. Click "Apply"
8. Click "OK"
9. Repeat the above steps for TXZBZ.BAT

An excellent source of SSTV and HDSSTV information is available from the website of David Jones, KB4YZ.
Information on DIGTRX, ARD-9800 Digital File Transfers, and many other programs is available on this site.
The URL is: www.tima.com/~djones

347. Kids Day from ARRL Newsletter

Yahoo group: Temple_ARC
Date: 2003-12-20 13:02:33 UTC
From: Steve S. Bosshard (NU5D)
Topic: 347 Message: 347

==>KID'S DAY IS SUNDAY, JANUARY 4!

For the first time, Kid's Day will occur on a Sunday. The first 2004 running of this popular operating event will be Sunday, January 4 (the second Kid's Day in 2004 will be Saturday, June 19). Intended to encourage young people--licensed or not--to enjoy Amateur Radio, Kid's Day offers a "mentoring opportunity" for experienced amateurs while giving youngsters some firsthand hamming experience and perhaps sparking a lifelong interest.

"Kid's Day is an opportunity to introduce your own youngsters, neighborhood kids and nieces and nephews to participate in the magic of ham radio," suggests Jean Wolfgang, WB3IOS, of ARRL Field and Educational Services. Originated by the Boring Amateur Radio Club <http://jzap.com/k7rat/>, Kid's Day now is sponsored and administered by the ARRL with BARC's cooperation and assistance. Now entering its tenth year, each running of Kid's Day typically attracts more than 1000 participants.

Kid's Day is not a contest, and patience is the byword on both sides of each contact. The role of the licensee and control operator is to help youngsters with the basics, keep an eye on the technical aspects of the operation, observe third-party traffic restrictions <http://www.arrl.org/FandES/field/regulations/io/3rdparty.html> when making DX QSOs and ensure station identification at proper intervals. In this event, it's quality of the contacts that counts, not quantity.

Kid's Day will run from 1800 to 2400 UTC, and there's no limit on operating time. The suggested exchange is name, age, location and favorite color. Stations may work the same station again if an operator has changed. Call "CQ Kid's Day."

Suggested frequencies are 14.270-14.300, 21.380-21.400 and 28.350-28.400 MHz plus 2 meter repeater frequencies, with permission from the repeater's sponsor). Guidelines for this event are available on the ARRL Web site <http://www.arrl.org/FandES/ead/kd-rules.html>.

All participants are eligible to receive a colorful certificate. Visit the ARRL Kid's Day Survey page <http://www.arrl.org/FandES/ead/kids-day-survey.html> to complete a short survey and post your comments. You will then have access to download the certificate page. Or you can send a 9x12 SASE to Boring Amateur Radio Club, PO Box 1357, Boring, OR 97009.

Kid's Day participants are invited to post logs and comments on the Internet <http://lists.contesting.com/pipermail/kids/>.

Austin SwapNet 12/21/03 de N5MNW, ARO and AARC. Website:
<outbind://1/www.AustinHams.org> www.AustinHams.org

Festive Phoners,

SwapNet was NCS'd from the Zilker Park Trail of Lights this week. A real sensory treat.

The Trail runs till the 23rd and TCREACT still needs an extra volunteer or two!

Hailey, Lori and I wish you the warmest greetings and hope you are spending time with

those who mean the most to you during this time. We are making up for lost time (spent

sick at Thxgiving) to visit family and friends. Chris and Andrew will be here on the 26th so

we will be pretty active until after they leave New Year's Day.

Hank Roeber- KC5HCT and father of Kevin KC5OLC became a silent key recently.

Please remember Kevin and his family in your thought & prayers this season.

>From Keith K5WX:

We have had a suggestion to start the (QCWA) code practice session at a speed of 3

words per minute and increase it to 4 wpm and then 5 wpm and 7 wpm. (I had been

starting with 5 wpm and going up from there. I actually ran it up to 20 wpm at the

end of last week's session! I guess I shouldn't have done that.) The code practice sessions will begin at 3 words per minute and gradually increase to

7 words per minute. We really want to provide a service to those people who are looking

to learn the code.

Keith, K5WX QCWA Chapter 67 Secretary

3M Half Marathon-- Ham Radio Volunteers Needed

The 3M Half Marathon and Relays will be on Sunday, January 25, 2004. The date will be

here before we know it, especially because we will all be preoccupied with the holidays for

the next few weeks. This event is great way for hams to hone their emergency comms

skills by participating in a directed traffic net. Amateur radio volunteers provide a vital

communications link to support runner welfare and emergency medical teams.

Please take a moment to sign up as a ham radio volunteer now, so I don't have to panic

later! The 3M Half Marathon is a Fast, Easy and Fun event. Ham volunteers will meet at

House Park Field at Lamar and 12th Street at 5:30 a.m. before the start of the race at 7:00

a.m. We usually finish no later than 11:00 a.m. This year will be even more fun because it

is the 10th anniversary and a special celebration is planned. All volunteers will get a VIP

parking pass to make it easy for you to come down to House Park Field and join in the

celebration at the Finish Line. As always, volunteers will be provided with a free t-shirt

to identify themselves as a volunteer VIP!

The 3 ways folks can volunteer:

- Volunteer Database for internal 3Mers

(Document link: 3M Half Marathon Database)

- Half Marathon & Relay website for external and internal folks.

<http://www.3m.com/races/volunteer.html>
http://www.3m.com/races/volunteer.html

- Half Marathon Volunteer Form for external and internal folks.

* You can also send email or call me and I will sign you up. Thanks,
Daniel F. Cronch N5RVS dcronch@... 3M Electronic Solutions Division
512-984-3882

January:

6th ARO mtg- Rick Kirchhof, ARO VP will be joined by Jeff Schmidt in hosting

a discussion of what the group would like to see in future meetings.

13th AARC mtg-

If you're not an ARRL member and are considering it, AARC/ARO will apply

$15 towards your AARC/ARO club dues if you sign up for first-time

ARRL membership through the club! Take advantage of 2003 ARRL signup,

join ARRL and AARC/ARO simultaneously!

Contact John KG5O@... or Roger W5WIA@... for more details.

356. New DIGTRX 1.31 December 23

Yahoo group: Temple_ARC
Date: 2003-12-23 20:00:13 UTC
From: Charlie Schlieper
Topic: 356 Message: 356

For all those interested in DIGTRX, a NEW version was just released December 23, 2003.

http://planeta.terra.com.br/lazer/py4zbz/hdsstv/digtrx131.zip

An alternate source would be through the website of K7CZ.
Access his website through "K7CZ.COM" or http://www.geocities.com/k7cz/
Bill Parfitt usually has the latest DIGTRX version accessible from his fine website.

73,
Charlie, N5TD

Go to Google. com and enter your home phone number.

I entered mine 254-527-3670 and was unpleasantly surprised. The only good thing is that yahoo maps shows my physical address approx 8 miles from the right spot. Stalkers and other bad people must love this. Eddie

358. ISS Packet on 145.80 Simplex

Yahoo group: Temple_ARC
Date: 2003-12-24 11:41:11 UTC
From: Charlie Schlieper
Topic: 358 Message: 358

Hello All,

I just worked VE1JH, Brent, in Doaktown, New Brunswick, Canada, via the ISS packet digipeater, RS0ISS-4, on 145.80 MHz simplex. The new digi call is --> R S (ZERO) I S S - 4

Reprogram your old Doppler OFFSETS to reflect the SIMPLEX packet operation now being used. I recommend the following THREE channels, utilizing a 4-kHz "total" OFFSET on two:

ISS APPROACH Receive 145.802, Transmit 145.798 MHz
ISS CENTER Receive 145.800, Transmit 145.800 MHz
ISS DESCENT Receive 145.798, Transmit 145.802 MHz

I have successfully used this +2/-2 kHz Doppler compensation for a long time. With the maximum average 2-meter Doppler shifts occurring at around 3.5 kHz, the +/- 2 choice will always place you within acceptible FM decode windows for packet.

Merry Christmas! And enjoy Ham Radio....

73, Charlie, N5TD

To the Slo-scan ATV group

Beginning tonight, Friday Dec. 26 and Saturday and Sunday, we will start
a new schedule for slo-scan. The new format will include both MMSSTV
and DIGTRK digital slo-scan. To download DIGTRX go to
http://www.tima.com/~djones/
Click on the second line which reads "DIGTRX Download & Setup"
Follow instructions
Please join the group and find out how easy and great the new digital
format can be. We have included the site for you to download the new
program. This new schedule will be as follows:
Mon-Thurs MMSSTV from 9-10p
Fri-Sat DIGTRK digital 9-10p
Sun MMSSTV 8-9p and DIGTRK 9-10p
Hope this will help everyone have fun in all the new as well as our
regular modes. See you all there...
Leon

Greetings ARRL members of North Texas,

Please share the following information with any non-ARRL members that you know of who may have participated in the Shuttle Columbia recovery efforts in East Texas.

In remembrance of Amateur Radio's involvement in the Shuttle Columbia disaster, the Nacogdoches Amateur Radio Club is hosting a special event. All amateurs who helped in this event are invited to return to Nacogdoches, participate, and remember.

All other amateurs are invited and encouraged to work the special event station that will be in operation on February 1st, 2004. For more information, and to register if you plan to attend the activities in East Texas, please visit the NARC web site and click on the link for details of the special event at <http://www.andersoft.com/narc/>

Hi All, Hope all had a great new year, We Did..
Anyway.. Just wanted to let everyone know the Lampasas Skywarn Repeater System is now operating on a new freq..

The NEW FREQ is: 145.330 Minus Offset and 162.2 Tone

The 146.860 Freq is no longer in operation due to it being stolen from Lampasas.. But we will insure it will be up for grabs in the next 91 days if its operation does not come on the air..

Thanks to all that has helped us getting things on the air..
This new freq is linked to the Southwest Lynx System covering Texas..

381. VA Repeater Location

Yahoo group: Temple_ARC
Date: 2004-01-04 16:37:32 UTC
From: Anthony Mikulastik
Topic: 381 Message: 381

The new VHF and UHF repeaters are both now located at the Temple VA Tower location. The only planed addition is a pair of UPS in case of AC power failure and for line suppression. Local coverage is very good on both repeaters.

VHF - 145.490, - 600 KHz, CTCSS - 123.0 Encode/Decode, Open Repeater

UHF - 444.500, + 5 MHz, CTCSS - 88.5 Encode/Decode, Open Repeater

I would like to thank Harold Reasoner - K5SXK, Chairman, Texas VHF-FM Society Frequency Coordinating Committee for his help in getting the repeater coordination for both repeaters moved to the new location.

Several local hams provided time and resources to getting the repeater project at the VA completed. Without the helpful cooperation of Steve - NU5D, Charlie - N5TD, Kay - KB5DC, Bill - WD5ELK and the Temple Amateur Radio Club this ham radio project could not have been completed. The competition of this ham radio project is an example of what can be accomplished when all parties come together in an open, honest, and helpful manner for the good of Amateur Radio with no hidden agendas.

I would also like to thank Randy Blodgett - VA Chief of the Facilities Management Service, the Media Department, the VA Police Department, and Dan at the boiler plant for their help in getting the equipment installed. Everyone at the Temple VA was a pleasure to work with!

Once again, thanks to all who came together, to make this project a reality. I hope area hams use the VA repeater system to enjoy the hobby of Amateur Radio. There are many different areas of interest in Amateur Radio and it is my hope the VA Repeater System will enable area hams to explore many of these exciting areas.

Anthony Mikulastik, WB5TTY

PASS ON TO EVERYONE YOU KNOW
I received a telephone call last evening from an individual identifying himself as an AT&T Service technician who was conducting a test on telephone lines. He stated that to complete the test I should touch nine(9), zero(0),
the pound sign (#), and then hang up.
Luckily, I was suspicious and refused.

Upon contacting the telephone company, I was informed that by pushing 90#, you give the requesting individual full access to your telephone line, which enables them to place long distance calls billed to your home phone number.

I was further informed that this scam has been originating from many local jails/prisons. I have also verified this information with UCB Telecom,Pacific Bell, MCI, Bell Atlantic and GTE. Please beware.

DO NOT press 90# for ANYONE.

The GTE Security Department requested that I share this
information with EVERYONE I KNOW.

PLEASE pass this on to everyone YOU know.

If you have mailing lists and/or newsletters from organizations you are connected with, I encourage you to pass on this information to them.

After checkin! g with Verizon they said it was true, so do not dial (9),zero(0), the pound sign # and hang up for anyone.

PLEASE PASS ON TO EVERYONE YOU KNOW

"If at first you don't succeed, skydiving is not for you."

Very Urgent!!!!!!!...

PASS THIS ON TO ANYONE YOU HAVE AN E-MAIL ADDRESS FOR.

If you receive an email titled: "It Takes Guts to Say Jesus" DO NOT OPEN IT. It will erase everything on your hard drive. This information was announced yesterday morning from IBM; AOL states that this is a very dangerous virus, much worse than "Melissa," and that there is NO Remedy for it at this time. Some very sick individual has succeeded in using the reformat function from Norton Utilities causing it to completely erase all documents on the hard drive. It has been designed to work with Netscape Navigator and Microsoft Internet Explorer. It destroys Macintosh and IBM compatible computers.

This is a new, very malicious virus and not many people know about it. Pass this warning along to EVERYONE in your address book and please share it with all your online friends ASAP so that this threat may be stopped. Please practice cautionary measures and tell anyone that may have access to your
computer. Forward this warning to everyone that you know that might access the Internet.

392. UPS X2 Installed at the VA

Yahoo group: Temple_ARC
Date: 2004-01-10 06:22:18 UTC
From: Anthony Mikulastik
Topic: 392 Message: 392

Two UPS units were installed at the Temple VA Hospital repeater site Friday, January 9, 2004. Each repeater has its own UPS. Each repeater should be able to run for quite some time should power be lost. Also the UPS provide line suppression to protect the power supplies and radio equipment. The VA Hospital repeater installation is now complete.

The police officer who opened the building for us seemed to look familiar. I suddenly realized he looked a lot like a younger Bob Jett. I asked him if his last mane happened to be Jett. To my surprise, he said yes, so I asked him if he knew Bob Jett. The officer told me he is Bob's (W7KPW) son. It really is a small world!

The system is working well and has great coverage on both bands. I can bring up both repeaters form Marlin to the North - East and Granger to the South of Temple.

397. Auto Battery Myths

Yahoo group: Temple_ARC
Date: 2004-01-13 12:57:56 UTC
From: Steve S. Bosshard (NU5D)
Topic: 397 Message: 397
Attachments: 1 described; binary payloads are missing from this source WARC

Battery Myth # 1
You may have heard this one before. It sometimes comes in the form of a tip from someone who calls in on a radio station, then gets passed on from there. Sometimes it given by radio announcers as a tip to listeners. It goes something like "On those very cold mornings, you can help your car start by turning on the lights for a little while before starting your car. It warms up the battery and helps it start better. "
One explanation offered is that the current flowing through the internal battery resistance generates the heat. In reality, the equivalent resistance of the battery is very low, and there just isn't enough to generate any significant heat. Since the starter may draw 20 times or more current than the headlights, if this were a significant effect, the starter would do more to warm the battery. And consider all that energy going into the headlights could be going into turning over the engine. When you run the headlights with the engine off, you are draining energy stored in the battery that otherwise could get you going.
The best way to make sure your car will start in the cold is normal or preventative maintenance. Have your battery and electrical system checked thoroughly before the winter season arrives. That includes: 1) electrolyte level 2) connections on all battery/starter cables 3) checking the age (date code) of the battery 4) Have the battery load tested 5) Checking the alternator / charging system. See the AutoTips alternator page <http://www.inct.net/~autotips/altrn.htm> .
If you are in a very cold area, you may be able to use a thinner 5w-30 weight engine oil rather than a 10w-30, or use a synthetic 10w-30 oil -- check your owner's manual.
Battery Myth #2 Storing a battery on a concrete floor will discharge the battery.
There is not currently a strong reason for avoiding contact of a battery with a concrete floor. The battery's contact with the concrete should not create a problem with the material in today' s batteries. If the battery is not clean, but has a surface layer of acid or grime which is conductive, the battery can be expected to self-discharge more rapidly than if it was clean and dry. Many years ago, the batteries were constructed with a wooden case around a glass jar with the battery in it. Any moisture on the floor could cause the wood to swell and possibly fracture the glass, causing it to leak. Shortly after the introduction of "Hard Rubber" containers, which were somewhat porous and of a less than ideal design, there was a chance of current to be conducted through the container of a high carbon content if the moist concrete floor permitted the current to find an electrical ground. These are two of the older reasons for not storing batteries on a concrete floor. There is no reference to avoiding storage on concrete floors in the Battery Service Manual published by the BCI. Their suggestion is appropriate for the current state of the art batteries built by

reputable battery manufacturers. For more information on storage, see the AutoTips Battery Storage <http://www.inct.net/~autotips/battstor.htm> Tips page.
(Thanks to Interstate Batteries <http://www.interstatebatteries.com/> for review and contributions to this article! Check out their Battery Care <http://www.interstatebatteries.com/battery_care/battery_care.htm> page for more information.)

398. Hamfest

Yahoo group: Temple_ARC
Date: 2004-01-13 21:27:24 UTC
From: Steve Bosshard
Topic: 398 Message: 398

Greetings ARRL Members of North Texas,

The latest ARRL sanctioned Hamfest will be held this weekend! On Saturday, January 17th from 8:00 AM until 4:00 PM, the Arlington ARC will be sponsoring Winter-Com at the University of Texas at Arlington.

I will be giving a presentation on the great opportunities that exist for Amateur Radio with the Department of Homeland Security/FEMA's Citizen Corps organization. If you're interested to see how you or your club can get involved with FEMA's massive volunteer and disaster response initiative, this program is for you. I will also hold an ARRL North Texas Section forum at the end of my presentation.

There will also me a number of other great programs presented as well as new and used gear for sale and some nice prizes.

Once again Winter-Com will be hosted by the UTA College of Engineering and the Arlington ARC will be handling the talk-in. Also, Winter-Com will be the host of the winter meeting for the VHF-FM Society, our frequency coordination body in Texas. So if you're interested in repeaters, Winter-Com is a great Hamfest to attend.

You can get the details on Winter-Com at www.wintercom.org.

I hope to see you there!

73,
Roy Rabey - AD5KZ

For all that know my oldest son, I just found out that Last Night my Oldest son Tommy Taylor (KC5UJH) was involved in a auto accident while on the way home in Austin Tx.

My Son is a active Ham Operator and a Paramedic for the Austin Area. He was hit head on in a accident while on the way home by a Drunk Driver that swerved into my sons lane of the highway. At present he is in intensive care with 2 Broken Legs and a fractured lower pelvis. Other injuries are not known.

Harold (KB5SXV) and I will be traveling to Austin Sunday Morning to Bracken Ridge Hospital.

PLEASE, WHEN YOU GOTO CHURCH TODAY SAY A PRAY FOR HIM..
THANKS
Tommie Taylor (WD9HNB)

Austin SwapNet 01/18/04 de N5MNW, ARO and AARC. Website:
www.AustinHams.org

Pentode Posse,
What a range of weather events we've seen in the past few days! Very
dry, cold
conditions, then humid in the 70's. After that, 2" rain followed by
abrupt clearing
and back to clear, cold and dry.
Lori's birthday was Sunday, so I spent lots of time with her, watching
a few movies,
doing Honey-do's around the house and generally being nice. I even
cooked dinner
Sunday, making spicy steamed shrimp and 'tater tots.

We hope to see you all at the Feb 1 Georgetown and other upcoming
Swapmeets!

January:
27th ARES general mtg- 7PM Marimont 38th/Guadalupe

February:
3rd ARO mtg- Joe Fisher K5EJL 160m mobile installation considerations &
operation. 10th AARC mtg-

Subject: Greater San Antonio Skywarn Training Conference
All,
For several years I've wanted to hold an area-wide
Skywarn spotter training program in San Antonio, similar to what has
been held in Austin for many years. The target audience of this
program would be emergency planners and responders, law enforcement,
fire and volunteer fire departments, members of the media, and amateur
radio operators.
Last year, San Antonio Amateur Radio Operators set up a smaller-scale
trial program at the UT Health Science Center and it went well. This
year, with their help, and the assistance of the Alamo Area Council of
Governments and other local organizations, we have scheduled the first
AACOG Skywarn Training Conference. It will be held at the UT Health
Science Center from 8:30 am to 4:00 pm on Saturday, March 6. That's the
final day of Severe Weather Awareness Week in Texas this year. Thank
you,
Larry Eblen

If you're not an ARRL member and are considering it, AARC/ARO will apply
$15 towards your AARC/ARO club dues if you sign up for first-time ARRL membership through the club! Take advantage of 2003 ARRL signup, join ARRL and AARC/ARO simultaneously!
Contact John KG5O@... or Roger W5WIA@... for more details.

SB QST @ ARL $ARLB003
ARLB003 ARRL to Propose New Entry-Level License, Code-Free HF Access

ZCZC AG03
QST de W1AW
ARRL Bulletin 3 ARLB003
>From ARRL Headquarters
Newington CT January 20, 2004
To all radio amateurs

SB QST ARL ARLB003
ARLB003 ARRL to Propose New Entry-Level License, Code-Free HF Access

The ARRL will ask the FCC to create a new entry-level Amateur Radio license that would include HF phone privileges without requiring a Morse code test. The League also will propose consolidating all current licensees into three classes, retaining the Element 1 Morse requirement--now 5 WPM-only for the highest class. The ARRL Board of Directors overwhelmingly approved the plan January 16 during its Annual Meeting in Windsor, Connecticut. The proposals--developed by the ARRL Executive Committee following a Board instruction last July--are in response to changes made in Article 25 of the international Radio Regulations at World Radiocommunication Conference 2003 (WRC-03). They would continue a process of streamlining the amateur licensing structure that the FCC began more than five years ago but left unfinished in the Amateur Service license restructuring Report and Order (WT 98-143) that went into effect April 15, 2000.

''Change in the Amateur Radio Service in the US, especially license requirements and even more so when Morse is involved, has always been emotional,'' said ARRL First Vice President Joel Harrison, W5ZN, in presenting the Executive Committee's recommendations. ''In fact, without a doubt, Morse is Amateur Radio's 'religious debate.'''

The entry-level license class--being called ''Novice'' for now--would require a 25-question written exam. It would offer limited HF CW/data and phone/image privileges on 80, 40, 15 and 10 meters as well as VHF and UHF privileges on 6 and 2 meters and on 222-225 and 430-450 MHz. Power output would be restricted to 100 W on 80, 40, and 15 meters and to 50 W on 10 meters and up.

''The Board sought to achieve balance in giving new Novice licensees the opportunity to sample a wider range of Amateur Radio activity than is available to current Technicians while retaining a motivation to upgrade,'' said ARRL CEO David Sumner, K1ZZ. Under the ARRL plan, current Novice licensees--now the smallest and least active group of radio amateurs--would

be grandfathered to the new entry-level class without further testing.

The middle group of licensees--Technician, Tech Plus (Technician with Element 1 credit) and General--would be merged into a new General license that also would not require a Morse examination.
Current Technician and Tech Plus license holders automatically would gain current General class privileges without additional testing.
The current Element 3 General examination would remain in place for new applicants.

The Board indicated that it saw no compelling reason to change the Amateur Extra class license requirements. The ARRL plan calls on the FCC to combine the current Advanced and Amateur Extra class licensees into Amateur Extra, because the technical level of the exams passed by these licensees is very similar. New applicants for Extra would have to pass a 5 WPM Morse code examination, but the written exam would stay the same. Sumner said the Board felt that the highest level of accomplishment should include basic Morse capability. Current Novice, Tech Plus and General licensees would receive lifetime 5 WPM Morse credit.

''This structure provides a true entry-level license with HF privileges to promote growth in the Amateur Service,'' Harrison said.

Among other advantages, Sumner said the plan would allow new Novices to participate in HF SSB emergency nets on 75 and 40 meters as well as on the top 100 kHz of 15 meters. The new license also could get another name, Sumner said. ''We're trying to recapture the magic of the old Novice license, but in a manner that's appropriate for the 21st century.''

The overall proposed ARRL license restructuring plan would more smoothly integrate HF spectrum privileges across the three license classes and would incorporate the ''Novice refarming'' plan the League put forth nearly two years ago in a Petition for Rule Making (RM-10413). The FCC has not yet acted on the ARRL plan, which would alter current HF subbands.

The ARRL license restructuring design calls for no changes in privileges for Extra and General class licensees on 160, 60, 30, 20,
17 or 12 meters. Novice licensees would have no access to those bands.

See ''ARRL to Propose New Entry-Level License, Code-Free HF Access''
on the ARRL Web site, www.arrl.org/news/stories/2004/01/19/1/, for the specific subband allocations ARRL is proposing for each class.

Charlie

418. HF DIGTRX Mode on 14.233 MHz USB

Yahoo group: Temple_ARC
Date: 2004-01-22 19:49:30 UTC
From: Charlie Schlieper
Topic: 418 Message: 418

Note to Digtrx users...

I enjoyed an HF session on 14.233 MHz, USB, using DIGTRX 1.35 today. Was fortunate to run into Dave, KB4YZ, in Bedford IN; Paul, N4ZFI, in Eclectic, AL; Gary, AA0OI, in Bayfield, CO; and Kirk, WA0CJ, in Milaca, MN, who helped me setup my TUNING tones and IMD. Exchanged several pictures in DIGTRX mode. I hope others will venture into this exciting DIGITAL mode, and enjoy the fun... It is a fascinating ham radio mode!

73, Charlie, N5TD

420. FW: Revised W5TSG emergency relay net/simplex

Yahoo group: Temple_ARC
Date: 2004-01-26 12:46:53 UTC
From: Steve S. Bosshard (NU5D)
Topic: 420 Message: 420

From: Carolyn Black [mailto:cablack2004@...]
Sent: Monday, January 26, 2004 3:01 AM
To: Carolyn KD5GLM Black
Subject: Revised W5TSG emergency relay net/simplex

To All Net Contollers and participants,

This Weds., Jan. 28, 2004 at 7:30pm. the first W5TSG Emergency Relay net on simplex will be held.

W5TSG Emergency Relay Net Simplex Operations:

1-Each net control should select a simplex frequency for the area they cover.

2-Net control preamble will be the same except that the phrase, "And all relay stations" be added.

3-Check-ins should proceed just as they do on the repeater net.

4-Net control should ask for "any relays" during each request for check-ins.

5-When you have compiled the list, continue with the 8pm relay to W5TSG when requested on 147.32 repeater.

6-All counties will be checking in on simplex from 7:30-8:00pm including Mclennan.

7-The total check-ins will be added to the list as usual but everyone checked in on simplex will be considered checked in on the regular 147.32 net and therefore will not be required to check in again on that net.

8-It won't be necessary to re-check on that net but the W5TSG net controller will ask for comments as usual.

This first attempt will no doubt present problems as it should. We hope we will be able to streamline the net to enable it to be totally simplex. For those interested, your endeavors have been greatly appreciated by most of the emergency persons throughout our area. Plugging this communications hole has been our goal and we are convinced we are doing just that.

Thank you all again for being what you are...responsible and dedicated hams.

If you have any questions, please call me at 254-754-7513 or toll free 888-204-9909 or email k5zzm@...

In addition to the above instructions for the first simplex net, please note these changes: All net controllers should check-in to the TSGARC net on 147.32 to tally the evening simplex check-ins. This is so that all of us can actually hear the results of this first net. After this initial net 147.55 simplex will be used as the reporting frequency at 8p on the last weds of each month.

The simplex frequencies for:

Bell, Bosque, Coryell and Hamilton will be 144.24 simplex

Hill County 146.54 simplex

Navarro, Freestone and Limestone 147.55 simplx

Williamson and surrounding counties 146.46 simplex

"Let's just do it"

Leon

ARRL JANUARY BOARD MEETING

Congratulations to President Haynie on being elected to his third two-year term! For the details check the ARRL web site at: http://www.arrl.org/news/stories/2004/01/20/1/?nc=1

One of the actions taken at the January board meeting was to initiate a new Mentoring Program. Check for details on the ARRL web site at: http://www.arrl.org/news/stories/2004/01/22/2/?nc=1At

Another action was a proposal to be submitted to the FCC for license restructuring to include a new entry-level license. Check out this story at: http://www.arrl.org/news/stories/2004/01/19/1/?nc=1

These two actions came from information in a recent study that the ARRL had conducted by an independent firm. One of the more startling things that we learned from the study was that in the last ten years the bulk of radio amateurs shifted from the 35-54 age bracket to the 55-74 age bracket. This along with only 2% of all amateurs being under 18, the board was sent a strong message that something had to be done.

On a more personal note, I have been the chairman of the Membership Services Committee this last year. A board action combined the Membership Services Committee with the Volunteer Resources Committee which formed a new committee called the Programs and Services Committee.
I would have been out of a job had President Haynie not appointed me to chair the Administration and Finance Committee. This will be a real challenge as we continue to maintain a fiscally sound ARRL.

UPCOMING ARRL CONVENTIONS

Oklahoma Section Convention, 19-20 Mar 2004, in Claremore, OK. For more information check: http://www.greencountryhamfest.org/
I plan on attending this convention this year.

West Texas Section Convention, 20-21 Mar 2004, in Midland, TX. For more information check: http://www.w5qgg.org Since I will be at the Oklahoma Section Convention, I've asked Vice Director, Dr. David Woolweaver, K5RAV, to represent the division.

UPCOMING SEMINAR

Emergency Communications Seminar, Sat 21 Feb 04, 9:am - 1:pm.
Participating agencies include: SATERN, ARRL, ARREC, ARES and RACES.
The seminar will be held in the Salvation Army Citadel, 2808 SE 44th St, Oklahoma City, OK. Seating is limited. If you are interested contact Dan

Miller K3UFG, 860-594-0340 or K3UFG@...

SPECIAL EVENT

In remembrance of Amateur Radio's involvement in the Shuttle Columbia disaster, the Nacogdoches Amateur Radio Club is hosting a special event. All amateurs who helped in this event are invited to return to Nacogdoches, participate, and remember.

All other amateurs are invited and encouraged to work the special event station that will be in operation on February 1st, 2004. For more information, and to register if you plan to attend the activities in East Texas, please visit the NARC web site and click on the link for details of the special event at http://www.andersoft.com/narc/

One of our ex-club members is now in your area and member of your club. Randy KA2EMT, he sent us your web page. Hopefully you will print this flyer out and announce our hamfest at your club meeting. We would really appreciate the help. We are planning on 500-700 people this year.

We are having a hamfest for WCLARC Leesville, LA on 14 August 2004. You are also welcome to put a link to your web page on ours. http://www.wclarc.com <http://www.wclarc.com/>

We would ask you to post this hamfest on your web site or put a link to our web page, and to pass the information on to your members.

WCLARC HAMFEST

LEESVILLE, LOUISIANA

14 AUGUST 2004

Austin SwapNet 01/25/04 de N5MNW, ARO and AARC. Website:
www.AustinHams.org

Dipole-vaulters,
February 10th AARC "Hands On Hamming" session will be a special "Show
and Tell" At ARL where you are invited to bring unusual or seldom-seen
items. We will have a
Camera connected to the video projector so everyone can have a good
look, as we did
the soldering show.

My Alinco APRS tracker lost its mind several days ago and I did not
make a backup of the commands (Murphy's law). I've done a web search
and found some good info, but my tracker hasn't shown up on FindU yet.
If you have known good settings for the 135T, please advise!

Lori and I hope to see you all at the Feb 1 Georgetown and upcoming
Swapmeets!

The Belton Expo has been pushed back a few weeks, due to Easter
weekend and
other scheduling issues. Likely weekends will be May 8, May 15, or May
22.
Please stay tuned and we will get the word to ya!

January:
27th ARES general mtg- 7PM Marimont 38th/Guadalupe

February:
3rd ARO mtg- Joe Fisher K5EJL 160m mobile installation considerations &
operation. 10th AARC mtg- "Show and Tell" session. Bring your unusual
or interesting items.

If you're not an ARRL member and are considering it, AARC/ARO will
apply
$15 towards your AARC/ARO club dues if you sign up for first-time
ARRL membership through the club! Take advantage of 2003 ARRL signup,
join ARRL and AARC/ARO simultaneously!
Contact John KG5O@... or Roger W5WIA@... for more details.

Hello to All,

Does anyone realize that 144.24 is down in the area of 2 meters that is typically SSB? Is that a typo?
Thanks,

Charlie, N5TD

To: Carolyn KD5GLM Black
Subject: Revised W5TSG emergency relay net/simplex

To All Net Contollers and participants,

This Weds., Jan. 28, 2004 at 7:30pm. the first W5TSG Emergency Relay net on simplex will be held.

W5TSG Emergency Relay Net Simplex Operations:

1-Each net control should select a simplex frequency for the area they cover.

2-Net control preamble will be the same except that the phrase, "And all relay stations" be added.

3-Check-ins should proceed just as they do on the repeater net.

4-Net control should ask for "any relays" during each request for check-ins.

5-When you have compiled the list, continue with the 8pm relay to W5TSG when requested on 147.32 repeater.

6-All counties will be checking in on simplex from 7:30-8:00pm including Mclennan.

7-The total check-ins will be added to the list as usual but everyone checked in on simplex will be considered checked in on the regular 147.32 net and therefore will not be required to check in again on that net.

8-It won't be necessary to re-check on that net but the W5TSG net controller will ask for comments as usual.

This first attempt will no doubt present problems as it should. We hope we will be able to streamline the net to enable it to be totally simplex. For those interested, your endeavors have been greatly appreciated by most of the emergency persons throughout our area. Plugging this communications hole has been our goal and we are convinced we are doing just that.

Thank you all again for being what you are...responsible and dedicated hams.

If you have any questions, please call me at 254-754-7513 or toll free 888-204-9909 or email k5zzm@...

In addition to the above instructions for the first simplex net, please note these changes: All net controllers should check-in to the TSGARC net on 147.32 to tally the evening simplex check-ins. This is so that all of us can actually hear the results of this first net. After this initial net 147.55 simplex will be used as the reporting frequency at 8p on the last weds of each month.

The simplex frequencies for:

Bell, Bosque, Coryell and Hamilton will be 144.24 simplex

Hill County 146.54 simplex

Navarro, Freestone and Limestone 147.55 simplx

Williamson and surrounding counties 146.46 simplex

"Let's just do it"

Leon

426. OFF TOPIC Microsoft vs. Mike Rowe Soft

Yahoo group: Temple_ARC
Date: 2004-01-27 13:14:18 UTC
From: Steve Bosshard
Topic: 426 Message: 426

-----Original Message-----

On Behalf Of Lawless, Bill
Sent: Tuesday, January 27, 2004 7:51 AM
To: dillo@...
Subject: [DILLO] Microsoft vs. Mike Rowe Soft

There's a happy ending in the saga of Microsoft vs. Mike Rowe Soft.
As we <http://www.foxnews.com/story/0,2933,108900,00.html> reported last week, the software behemoth was about to come down hard on the Victoria, B.C., 17-year-old who had had the gall to name his Web-design firm after himself.
Mike had just received an inch-thick cease-and-desist order from the company's Canadian law firm, which threatened more legal action if he didn't give up the rights to his domain name, <http://www.mikerowesoft.com/> http://www.mikerowesoft.com.
But the media attention given to the story ☐ which we here at Out There are happy to be part of ☐ may have led Microsoft to ponder the negative aspects of looking like Goliath about to smite a fresh-faced David.
So Microsoft made Mike an offer ☐ all expenses reimbursed, a subscription to the company's software-development Web site, an Xbox gaming console and a free trip to Microsoft's Redmond, Wash., headquarters, about 100 miles from Mike's house.
"We wanted to do this in a way that's going to foster his interest in technology," Microsoft spokesman Jim Desler told the Associated Press.
Mike agreed and is in the process of moving to a new site, <http://www.mikeroweforums.com/> http://www.mikeroweforums.com.
"He's happy with the results," Mike's father, Kevin Rowe, told the Vancouver Province newspaper.
"We take our trademark seriously," a Microsoft spokesman told zdnet.co.uk, "but maybe a little too seriously in this case."

427. Spam Filters - Caught ONE it shouldn't

Yahoo group: Temple_ARC
Date: 2004-01-27 20:53:47 UTC
From: Charlie Schlieper
Topic: 427 Message: 427

Just to let you know....

Recently I was sending out notices about new UPDATES on the program DIGTRX, and wondering why Kay never received them. After some investigation, she found it hung up in VVM's spam filter she had setup.
The messages involved all had the word "Digtrx" in the subject lines. Perhaps it's the way her SPAM FILTER was setup? Could it have interpreted DIGTRX--- for some kind of "TRICKS?" I won't elaborate on that, but just wanted to pass along that it's possible that FILTERS can catch EMAILS with the word "DIGTRX" in the subject.

I also sent Larry, W5NCD, in Waco an e-mail of a digtrx mod, which included a JPEG attachment. He never received it! It never came back, and it was sent to the correct e-mail address.

There are variable ways to setup FILTERS, so I'm not sure exactly what could catch "DIGTRX," but thought I would pass this recent experience along.

i'd like an opinion from the moderator on posting ads. i may have started this by forwarding an ad to help an old ham sell his *personal* eqiupment, but i'd like to agree on a policy before mad dog murry shows up. in retrospect, my opinion is posting by tarc members of *personal* equipment for sale should be accepted. posting or reposting of ads by non-tarc members, as i did, or posting of buy and sell equipment, like mad dog and that fellow tom somewhere should be viewed and treated as spam. just my two cents worth, and sorry if i made a bobo earlier or just now.

Regarding For Sale Items, I think occassional listings by area hams would be OK. Once a week new listings and the like and non-commercial postings might be good for the community.

For more agressive folks there are many forums that have nothing but sales items, but a posting every now and then shouldn't hurt anything.

Any one else have comments?

Hello All,

I just found out, from information passed on from a lady in North East Texas, that our Belton Expo is going to be on May 22, 2004.

Wonderful---- but isn't this a little like, someone finding out there's been a death in the family on TV news, before they've been notified?

I know our Expo chairman has had a hard time nailing this one down, but I sure wished our local club officers, and board members, were priviledged to the information first. Just my thoughts...

444. Ham Expo Date + Commentary

Yahoo group: Temple_ARC
Date: 2004-02-01 22:02:08 UTC
From: Michael LeFan
Topic: 444 Message: 444

Ham Expo is May 22, 2004.

I apologize to everyone for the way in which this task of setting the date has been mishandled. I accept full responsibility for the mixups. Some were avoidable, some were not, and all are now history. That is the way I am dealing with the situation. Those things are over with. Whether it's good or bad, Ham Expo is May 22, 2004. I don't need any more evaluations of the wisdom of selecting that date. We will try to do better with future Expo dates.

Now, it is hoped that we can all move forward with making this Expo as successful and enjoyable as previous editions.

Thank you and 73,

Mike WA5EQQ

453. Austin Swap Net

Yahoo group: Temple_ARC
Date: 2004-02-02 17:26:14 UTC
From: Steve Bosshard
Topic: 327 Message: 453

Austin SwapNet 02/01/04 de N5MNW, ARO and AARC. Website:
www.AustinHams.org

Farnsworth Fans,
Lori really enjoyed seeing you all the Georgetown Swapmeet. Rick
W5RHT, Lori KM5MQ
and the WCARC did another really great show in the park. All tables
were sold and
assigned by the last hour of setup and the hall was filled with
attendees! The VE team
was busy, several new Hams and upgrades resulted.
Henry and Tina Allen (Tx Bugcatcher) really put forth an extra effort
to be at the
swapmeet that deserves mentioning. They are directors for a senior
group at their
church, which had an outing scheduled for Jan 31st. They had the
outing, got people
home and left Plano about 11pm Saturday night. They got to Georgetown
around
3am and slept a few hours 'til doors opened around 8. After the fest,
Lori and I met
them for a nice relaxed dinner at The Olive Garden. We had a nice visit
and saw
them off as they began their trip back home.

According to www.tarc.org/, the Belton Ham Expo has been pushed back a
few
weeks to May 22. I've heard several differing reports, so please stay
tuned!

I've reloaded TNC settings into the APRS tracker and made a backup. I
had to send a
RESET command and simply edit four lines. I'm beaconing again, visible
on FindU.com: www.findu.com/cgi-bin/find.cgi?call=n5mnw-2

February 10th AARC "Hands On Hamming" session will be a special "Show
and Tell" At ARL where you are invited to bring unusual or seldom-seen
items. We will have a
Camera connected to the video projector so everyone can have a good
look, as we did
the soldering show.

February:
3rd ARO mtg- Joe Fisher K5EJL 160m mobile installation considerations &
operation. 10th AARC mtg- "Show and Tell" session. Bring your unusual
or interesting items.

From: Larry Eblen
All,
The American Red Cross Headquarters in San Antonio has graciously offered to host a Partner's Workshop for the National Weather Service on February 19. We'll meet at the Red Cross Headquarters at 3642 E. Houston in San Antonio to discuss the many changes in NWS products and programs and to answer your questions. We set the time from Noon until 2:00 pm to allow the afternoon media to attend. So, this will be a "brown bag" event - you can eat before or you can bring your own lunch. The agenda will be:
12:00pm Welcome - Paul Prentiss, Disaster Emergency Services, San Antonio Area Headquarters, American Red Cross
12:10pm The Top 10 Weather Events of 2003 - Joe Arellano, EWX Meteorologist-in-Charge
12:20pm The NWS Fire Weather Program - Monte Oaks, EWX Fire Weather Focal Point
12:45pm NWS Digital Forecast Products - Jon Zeitler, EWX Science and Operations Officer
1:15pm New Graphic Flood Products - Mark Lenz, EWX Senior Service Hydrologist
1:45pm The Severe Weather Season - Larry Eblen, EWX Warning Coordination Meteorologist
Thank you.
Larry Larry.Eblen@...

If you're not an ARRL member and are considering it, AARC/ARO will apply
$15 towards your AARC/ARO club dues if you sign up for first-time ARRL membership through the club! Take advantage of 2003 ARRL signup, join ARRL and AARC/ARO simultaneously!

From: john, ke5c
Topic: 454 Message: 454

yes, a number of vendors said easter weekend wouldn't work for them, so the event chairman was faced with trying to make those vendors happy and not upset others for whom easter weekend would have worked just fine. on top of this there were scheduling issues (rapidly changing availability, etc.) with the expo center. not everyone is thrilled with the way the dust settled, but what can you do when scheduling conflicts arise? hopefully regular attendees will understand and not be overly inconvenienced this spring.

73, john

----- Original Message -----

Subject: [CTDXCC] Belton Ham Expo

The date for the Spring Belton Ham Expo has changed. The date is no longer Saturday, April 10. The date is now Saturday, May 22. Apparently, this change was initiated because April 10, this year, is the Saturday before Easter, and there were some who felt this would be a problem somehow.

May 22 is the weekend just after the Dayton Hamvention, and the weekend before (this year) the CQ WPX CW. If it remains on the fourth weekend of May, it will conflict with CQ WPX CW every six out of seven years (just not this year, as there happen to be five full weekends in May this year.) Hopefully, this is a one-time abberation, and the Ham Expo will be back in April in 2005.

455. Note of Correction

Yahoo group: Temple_ARC
Date: 2004-02-03 18:47:30 UTC
From: Charlie Schlieper
Topic: 455 Message: 455

In my first message on Digtrx frequencies, I inadvertently included 14.320 MHz.
This is in error. The resend of the same message corrects the error.
14.320 was on the list, but it had "(AOR)" after it. I did not catch this when first typing the list.
I would NOT recommend 14.320 MHz for DIGTRX.

73, Charlie

456. Resend - Digtrx Frequencies

W5TSG Emergency Relay net

Follow-up Report

28 Jan 2004 Simplex

To all participants:

The first FULL simplex emergency relay net was nearly perfect with just a few little quirks that will be worked out before the next one to be held on Wednesday, February 25, 2004.

We were able to bring in stations from as far away as Cedar Park near Austin as well a great group of local hams in the Central Texas area. The total number of check-ins was 41. That is pretty stout for our first try. We can all be proud of this accomplishment.

Here are some minor changes that might help on the next full simplex net:

NET SCHEDULE

1-Repeater relay nets

Wednesdays 7:30p-8p

COUNTY REPEATER FREQUENCIES

Bell: 147.18

Bosque: 147.18 123 tone

Coryell: 147.18

Hamilton: 147.18 123 tone

Hill and surrounding area: 147.78 123 tone

Limestone and surrounding area: 145.39

McLennan: 147.32 123 tone

Williamson and surrounding areas: 146.90

2-Simplex relay net

LAST WEDNESDAY of each month:

Feb 25 Mar 31 Apr 28 May 26 Jun 30 Jul 28 Aug 25

Sep 29 Oct 27 Nov 24 Dec 29

All simplex nets start at 7:30pm

COUNTY SIMPLEX FREQUENCIES

Bell: 145.55

Bosque: 144.34

Coryell: 144.34

Hamilton: 144.34

Limestone: 146.55

McLennan: 147.55

Williamson and surrounding areas: 146.46

-Net Participants

Net Controllers

a-Announce the request for any relays

b-Transmit check ins frequently

Net check-ins

a-Listen for any mobile or station not mentioned by Net Control

b-Get the stations call-sign and transmit as a "relay"

c-Net Control may not be able to hear what you do

d-Mobiles try and position for the highest location

459. North Carolina Hams See Progress Energy Phase II BPL Trial

From: Steve Bosshard
Topic: 459 Message: 459

North Carolina Hams See Progress Energy Phase II BPL Trial

By Gary Pearce, KN4AQ
January 20, 2004

North Carolina amateurs and a utility company come together to
learn about interference issues related to the Internet delivery system.

Progress Energy of Raleigh, North Carolina fulfilled its promise to
North Carolina Amateur Radio operators when it recently invited several
area hams to observe its Phase II Broadband Internet over Power Line
(BPL) trial in a rural subdivision south of the city.

The invited hams included Wake County Emergency Coordinator Tom Brown,
N4TAB; North Carolina
Section Technical Specialist Frank Lynch, W4FAL, and myself in my
capacity as a North Carolina
Section Public Information Officer. Network engineer Bill Godwin
represented Progress Energy
and engineer Gerrett Durling represented Amperion, the equipment
manufacturer. Also present for the tests were two hams who are employees
of Progress Energy: Don Duckett, N9MN, and Will
Roberts, AA4NC.

A half mile of feeder

The BPL trial consisted of a half-mile of overhead power line feeder
along a highway, and a few dozen homes passed by buried power lines
carrying the BPL signal. The BPL equipment had been installed and
connected, but no customers were on-line yet; the neighborhood was brand
new, and was isolated from other residential areas by farm fields and a
wooded stream.

Durling explained the system to us. The overhead feeder brought the
broadband Internet connection to the neighborhood via BPL. An
802.11-based wi-fi system provided a bridge from the feeder to the
neighborhood underground system, where it was again transported on the
power line with BPL. There was a "repeater" in an above-ground pedestal
every block or so, and most of those were connected to 802.11 wireless
access points. The access points provided the Internet
connection to the residences; customers would not be connected to the
BPL system directly from their ac outlets. Customers who sign up for the
test will need to have 802.11 wi-fi transceivers connected to their
computers or home networks.

We hams were particularly interested in the spectrum used for the BPL
legs of the system.

Durling explained that each run of BPL, from repeater to repeater, used two blocks of
spectrum, about 3.5 MHz wide for the downstream signal and 2.5 MHz wide for the upstream signal, for a total of 6 MHz. At each repeater, a different block of spectrum was required. The blocks could be anywhere between 2 and 50 MHz, although Amperion preferred to use spectrum between 8 and 30 MHz. The specific spectrum chosen for any line segment depends on the characteristics of the line and the need to avoid frequencies that would interfere with other services in the area of that line, including Amateur Radio. The blocks could be as close as 100 kHz apart, or could be as far apart as opposite ends of the available spectrum.

Monitoring for interference

The overhead feeder segment in this trial used spectrum blocks around 25 MHz and 29 MHz. As I tuned across the band I was to monitor, I wondered what I would hear. I had the volume cranked up, sensitive to every pop and squawk from the speaker. There is variety in the sounds of the various BPL systems, so I wasn't sure what to expect. Once I began hearing it, though, the Amperion system's multiple-carrier sound was unmistakable as it rose out of the background noise.

We listened in that area with mobile ham equipment, driving on the road adjacent to the
power line, and received strong S9 signals in the immediate vicinity of the line. The signal
fell off quickly when driving away from the line and was only faintly audible at about 400
feet. The BPL signal appeared as a series of carriers about 1 kHz apart and completely filled
each block of spectrum. Some of the carriers were modulated by slow clicks, but the system was not carrying data to homes. A ham at a home station just under a mile away reported hearing the 10-meter BPL signal at about S6 using an 80-meter dipole antenna. A ham with a large multi-element antenna on a 100-foot tower five miles away did not hear any BPL signal.

We amateurs also listened for noise coming from the underground BPL segments. We found spectrum used near 10 and 15 MHz--including a strong beat note against WWV at 15 MHz. The BPL signal was
weaker and only audible within about 100 feet of the above-ground pedestal. The hams using mobile stations to monitor heard no BPL signals between pedestals. A home station with a
larger antenna would have a better chance of hearing the underground signals anywhere in the neighborhood.

Next we tried a brief transmit test, with results reported by the Amperion Network Operation Center (NOC) via cell phone. The NOC sent data through the overhead feeder, and looped it back to measure throughput. A 5-watt FM signal on 29.6 MHz from a mobile parked directly

under the overhead segment stopped throughput for the duration of the transmission. However, a 100-watt FM signal on the same frequency only caused a momentary blip in throughput. A 100-watt CW carrier on 40 meters had no effect on data throughput. This was just a quick test, and the contradictory results shouldn't carry too much weight.

Amperion's BPL equipment is frequency agile. The NOC can quickly move any above-ground repeater to another block of spectrum, or notch a few hundred kHz of spectrum in a block, by remote control. During this test, though, they were not able to move the overhead segment away from the 10-meter band, due to the schedule of the NOC staff. There could be a little domino effect when one repeater is moved, since adjacent repeaters must use different blocks of spectrum. This could conceivably cause one ham to start receiving interference if his local spectrum block was moved to accommodate an interference problem of a ham on the other side of the neighborhood.

Conclusions

I felt that the discussions with Durling showed that Amperion is concerned with interference to hams and other spectrum users. Durling said his company is especially interested in the report due from the NTIA sometime early this year, adding that NTIA has spent several weeks monitoring Amperion and other companies' installations. One question not addressed was ionospheric propagation--all of the discussion was about the effect of local signals--but it is possible that BPL signals, which have the characteristics of QRP HF ham transmissions, could reflect off the ionosphere and appear hundreds or thousands of miles away, causing interference. The energy of one isolated trial area might not have much impact, but a mature nationwide system with hundreds or even thousands of installations using the same spectrum blocks could be a very different story.

It's too soon to draw many firm conclusions from this one test observation. Amperion's tests show that their signals meet Part 15 guidelines, although those guidelines were drawn more to measure the leakage from a computer cabinet than from a long unshielded wire. Amateur observation of this and other BPL trials show that, Part 15 limits notwithstanding, the radiation is clearly enough to cause harmful interference in the immediate vicinity of the power line, which would violate Part 15, whether the signal is within radiation limits or not.

Amperion's equipment appears to be frequency agile enough that, in the hands of a utility or
service provider who cared enough and was responsive enough, interference problems to
individual hams could be cured on a case-by-case basis, assuming that systems were not
designed to avoid the ham bands altogether from the beginning. Not all BPL systems--or
Internet Service Provider subcontractors--may have this flexibility, or level of customer
service.

Even with frequency flexibility, fitting 3.5 MHz wide blocks of energy in between ham and
other bands would be a delicate jigsaw puzzle. The good news is that Progress Energy and Amperion are clearly aware of and concerned about interference to spectrum users, especially Amateur Radio, and they are considering ways to eliminate it. While the "BPL industry" has taken a general public stance that there is no interference problem (see FCC ET Docket No. 03-104, Reply Comments of the Power Line Communications Association, in Adobe PDF format), Progress Energy and Amperion have not made those statements and there was no evidence of that attitude at this meeting. The technology is still young and evolving, with interference mitigation a clear goal in next generation designs. Is the strange noise you're hearing interference from a BPL system? Probably not. These days, the bands are full of computer generated noise. Some of it may be hard to distinguish from BPL system sounds, except for one thing: when BPL signals are present, they occupy a broad chunk of spectrum--hundreds of kHz. If you're hearing noise at just one spot on the dial, it's probably not BPL. Plus, BPL installations are so rare right now that it's quite unlikely you are hearing one.

If you suspect an interference problem from a power line, you should contact the utility itself first. From there, ARRL can help you as you interact with the utility to resolve the problem. More information on power line noise can be found on the ARRL Web site at www.arrl.org/tis/info/rfi-elec.html.

460. Ham-Com 2004 Pre-Registration NOW IN PROGRESS!

Yahoo group: Temple_ARC
Date: 2004-02-04 21:54:09 UTC
From: Steve Bosshard
Topic: 460 Message: 460

The following information is being sent to you on behalf of the organizers of Ham-Com 2004.

Ham-Com 2004 Pre-Registration NOW IN PROGRESS!

Ham-Com 2004 is scheduled for June 18-19, 2004 at the Arlington Convention Center in Arlington, TX. You can pre-register on-line via http://www.hamcom.org/ using Visa or MasterCard and save $2.00 per badge from now until May 25, 2004. The discount is for on-line registrations ONLY. Forms are available at the Ham-Com 2004 web site if you want to mail or FAX your registration.

Additional family member badges are $5.00 (pre-register on-line and receive a $1.00 discount per family member until May 25, 2004). Children under 12, students, Royal Rangers, Boy and Girl Scouts are FREE!

All badges must be picked up at the will-call desk in the main lobby, so be sure and save your e-mail acknowledgement to speed your entry into the event. WE WILL NOT MAIL BADGES!

Outdoor Flea Market pricing has been reduced to $20.00 per space for the 2004 event. Spaces are allocated on a first-come, first-served basis. Please see the posted policy at http://www.hamcom.org/ for details.

There are still plenty of Indoor Flea Market tables available-these will go fast, so don't wait too long!

REMEMBER: Ham-Com is much more than a Hamfest! The DX community's well-planned agenda of speakers and forums draws record crowds. Ham-Com is one of Amateur Radio's "must attend" events. Other interest groups are following the DX'ers lead and make our line-up of programs and extra events big attractions for a wide range of Amateur Radio enthusiasts.

This year, Ham-Com is host to the ARRL West Gulf Division Convention and will feature several guest speakers. They include:

- Jim Haynie, W5JBP, ARRL President, will speak on current topics including license restructuring and BPL.

- Riley Hollingsworth, K4ZDH, of the FCC's Enforcement Division will provide the keynote address and host an open panel discussion.

Other features at this year's event include:

- The Lone Star DX Luncheon.

- The Wouff Hong Award Ceremony.

- Mark Spencer, WA8SME, ARRL "Big Project" Manager, with comprehensive information about educational materials available to schools.

- An enhanced SKYWARN session and other interesting programs by the National Weather Service Fort Worth, TX office.

- A one-day Radio Merit badge session for Boy Scouts of America

Plus, a comprehensive series of presenters and forums by:

- The Lone Star DX Association

- The North Texas APRS Workshop

- The North Texas QRP Club

- The North Texas Microwave Society

Your participation is vital to this event and it is well worth your time to attend. Ham-Com is manned and managed by volunteers from its Board of Directors and many North Texas Ham Radio Clubs. There are no paid employees of Ham-Com, Inc. Bill Nelson, AB5QZ, is President of the Board. Don Smith, W5DS, and Dr. Byron Landress, W5IBE, are Directors. Barry A. Goldblatt, WA5KXX, President of the Plano Amateur Radio Klub (PARK) is the Chairman for the 2004 event. Bob Peters, W1PE, is Commercial Exhibitor Chairman.

You can contact us via phone or FAX at 214-361-7574, send e-mail to chairman@... or visit our web site: http://www.hamcom.org/.

We look forward to seeing you at Ham-Com 2004!

ARRL North Texas Section
Section Manager: Roy C. Rabey, AD5KZ

Hello all,
Things are going okay since our move to KY, It's a whole lot colder here, though!

During one of the club meetings before I left, the ARRL section manager had a promotional video that was played for the club, and I think he gave a copy to someone. I am interested in getting a copy of that if anyone can help me out.

Thanks,
Ron Gast

2.04 A member shall lose his membership upon failure to renew said membership within sixty (60) days following January 1.
2.07 Dues shall be payable on the first day of January each year.
2.10 Non-payment of annual dues by the renewal date shall result in termination of membership. Members who are delinquent in dues may not vote or hold office. Those who are delinquent more than 30 days will have their membership revoked. Membership will be reinstated upon payment of the current full-year dues.
3.04 A quorum shall consist of a minimum of fifteen percent (15%) of the voting members
4.01 The affairs of TARC are managed by the Board of Directors. Directors must be Full voting members.
4.04 If a vacancy should occur prior to June 30, a special election will be called by the Board of Directors to fill the remaining term. If the vacancy occurs after June 30, the Board of Directors shall fill the vacancy with a member of the Board's choice.
5.01 Qualification for Office
A. The President and Vice-President shall have been the holder of a valid Amateur Radio License for at least two (2) years, and a Full Member of the Club for at least one (1) year immediately preceding nomination for office.
B. A member of the Board of Directors shall have been the holder of a valid Amateur Radio License for at least two (2) years, and a Full Member of the Club for at least one (1) year immediately preceding nomination for office.
C. All elected officers and directors shall be licensed Amateur Radio Operators and shall be Full or Family members of TARC.
5.06 A member eligible to cast a vote in the Election of Officers is one who has been a member of the club for at least 90-days prior to the election, and is in good standing with the club. Each voting member may vote for a maximum of one individual for each office.
5.09. Each officer and director will hold office until their successor has been elected and has assumed office.
5.10 Vacancies in an elective office will be filled at the first regular meeting after the vacancy occurs. When filling vacancies on the Board of Directors or for club officers, nominations shall be accepted from the floor for the vacated office. Motions to close nominations shall not be accepted until all parties wishing to make nominations have been heard.
5.11 The nominee receiving a majority of votes by secret ballot shall be declared elected to fill the remaining term of the vacated office. A runoff vote will be taken if needed. The elected person shall assume the duties of the vacated office immediately.
8.02 The President has singular authority to authorize expenditures and make payments of $250 or less on his own authority. Amounts beyond this

level must be approved by the Board of Directors ***(or brought to the membership for a vote.)***
The proposed amendment to be voted on tonight will remove the words in parenthesis above in section 8.02
9.02 These bylaws may be amended at any regular meeting, provided that the intent to amend and the proposed amendments were stated to the membership in written form at least one month prior.

okay. for now we're doing 100 qso blocks of random half-qso's. both cq and s&p halves are randomly represented:

1) cq style: k5tr ke5c 105 john tx (ke5c solicited the qso and has to move)

2) s&P style: k5tr 105 john tx ke5c (ke5c gets to stay for one more qso).

as the files are built, they will be placed here:

http://www.kkn.net/~k5tr/audio/sprint_practice/

eventually an html page will give full details. the first block are the "high-speed" tracks which run from 35 to 42 wpm. each track is about 10 minutes long with 100 qso's at this speed. the filename indicates the highest speed, e.g., sprint42p0.mp3 is practice track 0 at (35 to) 42 wpm. you can download these tracks and drop them onto an audio cd writer and they will be expanded to wav files. then you can burn a conventional audio cd and drive around town listending to simulated sprint qso's for practice. at this speed, the first 6 tracks fit on one cd. slower tracks will follow.

cq na sprint!

73, john (& george who is doing most of the hard work)

466. Interesting trip home

Let Their Success Be Your Inspiration! - this is GREAT!!
Christy :)
The older I get, the more I enjoy Saturday mornings. Perhaps it's the quiet solitude that comes with being the first to rise, or maybe it's the unbounded joy of not having to be at work. Either way, the first few hours of a Saturday morning are most enjoyable.

A few weeks ago, I was shuffling toward the basement ham-shack with a steaming cup of coffee in one hand and the morning paper in the other. What began as a typical Saturday morning turned into one of those lessons that life seems to hand you from time to time. Let me tell you about it. I turned the dial up into the phone portion of the band on my ham radio in order to listen to a Saturday morning swap net. Along the way, I came across an older sounding chap, with a tremendous signal and a golden voice. You know the kind; he sounded like he should be in the broadcasting business. He was telling whomever he was talking with something about "a thousand marbles." I was intrigued and stopped to listen to what he had to say.

"Well, Tom, it sure sounds like you're busy with your job. I'm sure they pay you well but it's a shame you have to be away from home and your family so much. Hard to believe a young fellow should have to work sixty or seventy hours a week to make ends meet. Too bad you missed your daughter's dance recital" he continued. "Let me tell you something that has helped me keep a good perspective on my own priorities."

And that's when he began to explain his theory of a "thousand marbles."

"You see, I sat down one day and did a little arithmetic. The average person lives about seventy-five years. I know, some live more and some live less, but on average, folks live about seventy-five years. "Now then, I multiplied 75 times 52 and I came up with 3900, which is the number of Saturdays that the average person has in their entire lifetime. Now, stick with me, Tom, I'm

getting to the important part. It took me until I was fifty-five years old to think about all this in any detail", he went on, "and by that time I had lived through over twenty-eight hundred Saturdays."

"I got to thinking that if I lived to be seventy-five, I only had about a thousand of them left to enjoy. So I went to a toy store and bought every single marble they had. I ended up having to visit three toy stores to round up 1000 marbles. I took them home and put them inside a large, clear plastic container right here in the shack next to my gear."

"Every Saturday since then, I have taken one marble out and thrown it away. I found that by watching the marbles diminish, I focused more on the really important things in life. There is nothing like watching your time here on this earth run out to help get your priorities straight.

"Now let me tell you one last thing before I sign-off with you and take my lovely wife out for breakfast. This morning, I took the very last marble out of the container. I figure that if I make it until next Saturday then I have been given a little extra time. And the one thing we can all use is a little more time."

"It was nice to meet you Tom, I hope you spend more time with your family, and I hope to meet you again here on the band. This is a 75 Year old Man, K9NZQ, clear and going QRT, good morning!"

You could have heard a pin drop on the band when this fellow signed off. I guess he gave us all a lot to think about. I had planned to work on the antenna that morning, and then I was going to meet up with a few hams to work on the next club newsletter. Instead, I went upstairs and woke my wife up with a kiss. "C'mon honey, I'm taking you and the kids to breakfast." "What brought this on?" she asked with a smile. Oh, nothing special, it's just been a long time since we spent a Saturday together with the kids. And hey, can we stop at a toy store while we're out? I need to buy some marbles...

A friend sent this to me, so I to you, my friend. And so, as one smart bear once said...

"If you live to be a hundred, I want to live to be a hundred minus one day, so I never have to live

without you." - Winnie the Pooh.

FCC PROPOSES RULES FOR BROADBAND OVER POWER LINES TO PROMOTE BROADBAND SERVICE TO UNDERSERVED AREAS AND INCREASE COMPETITION

Washington, DC - As part of its ongoing efforts to promote access to broadband services for all Americans and to encourage new facilities-based broadband platforms, the Federal Communications Commission today proposed changes to certain technical rules that will foster broadband deployment using the significantly untapped capabilities of the nation's power grid, while safeguarding existing services against harmful interference.

The Part 15 rule changes, proposed in a Notice of Proposed Rulemaking (Notice), set forth procedures to measure the radiofrequency (RF) energy emitted by equipment used to provide broadband service over power lines and establish particularized interference mitigation requirements. By facilitating access to broadband over power lines (BPL), the Commission takes an important step toward increasing the availability of broadband in rural and underserved areas because power lines reach virtually every home and community in the country. In areas in which consumers already have broadband access, BPL enhances competition by providing another broadband alternative. These proposed changes will also facilitate the ability of electric utilities to dynamically manage the power grid itself, increasing network reliability.

Specifically, the Notice adopted by the Commission:

- proposes rules requiring BPL devices to employ adaptive interference mitigation techniques to prevent harmful interference to existing users, such as public safety and amateur radio operators. These techniques would enable BPL devices to cease operations altogether, dynamically reduce transmit power, and/or avoid operating on specific frequencies to prevent harmful interference;

- proposes developing a public database that would include such information as location, operational frequencies, and modulation type of BPL devices, which will facilitate the resolution of interference issues in a timely fashion;

- seeks comment on specific RF measurement guidelines for BPL devices and other carrier current systems. These guidelines will ensure that emission measurements for these systems are made in a consistent manner. While the Notice addresses RF measurement guidelines, it does not propose any changes to existing applicable emission limits.

- more -

Notably, some electric utilities already use a lower speed version of BPL technology to manage their internal networks. Widespread deployment of BPL devices will afford these same companies added benefits such as, remote power outage notification, load management to reduce peak power usage, improved load balancing, and remote meter reading capabilities.

Action by the Commission, February 12, 2004, by Notice of Proposed Rule Making (FCC 04-29). Chairman Powell, Commissioners Abernathy, Martin and Adelstein, with Commissioner Copps approving in part and dissenting in part. Separate statements issued by Chairman Powell, Commissioners Abernathy, Copps, Martin, and Adelstein.

NOTE: ARRL Headquarters will be closed February 16: ARRL Headquarters will
be closed Monday, February 16, for the Presidents' Day holiday. There will
be no W1AW code practice or bulletin transmissions that day. ARRL
Headquarters will reopen Tuesday, February 17, at 8 AM Eastern Time.
==========================================================

==>FCC OKAYS BPL PROPOSAL

The FCC has unanimously approved a Notice of Proposed Rule Making (NPRM) to
deploy Broadband over Power Line (BPL). The NPRM is the next step in the
BPL proceeding, which began last April with a Notice of Inquiry that
attracted nearly 5200 comments--many from the amateur community. The FCC
did not propose any changes in emission limits for unlicensed Part 15
devices, but said it would require BPL providers to apply "adaptive"
```

interference mitigation techniques to their systems. An ARRL delegation that attended the February 12 FCC open meeting in Washington later expressed disappointment in the FCC action.

"The Commission clearly recognized that the existing Part 15 emission limits are inadequate to stop interference," Sumner said," but it's placing the burden of interference mitigation on the licensed user that's supposed to be protected," said ARRL CEO David Sumner, K1ZZ.

Sumner said that if the FCC really believed current Part 15 emission limits were sufficient, it would not have had to require that BPL providers institute interference mitigation systems. The FCC has not yet released the actual NPRM, and a presentation by the FCC's Office of Engineering and Technology (OET) revealed only its broad outlines. Sumner said the League would not take a formal position until it reviews the full NPRM.

Anh Wride of the OET staff spelled out the scope of the NPRM, which only addresses so-called "access BPL"--the type that would apply radio frequency energy to exterior overhead and underground low and medium-voltage power lines to distribute broadband and Internet service.
She said the OET staff believes that interference concerns "can be adequately addressed." Wride said the FCC's BPL NPRM:

* Applies existing Part 15 emission limits for unlicensed carrier-current systems to BPL systems. Part 15 rules now require that BPL systems eliminate any harmful interference that may occur "and must cease operation if they cannot," she noted.

* Requires BPL systems to employ "adaptive interference-mitigation techniques, including the capabilities to shut down a specific device, to reduce power levels on a dynamic or remote-control basis and to include or exclude specific operating frequencies or bands."

* Subjects BPL providers to notification requirements that would establish a public database that would include the location of BPL devices, modulation type and operating frequencies.

* Proposes guidelines to provide for consistent and repeatable measurement of the RF emissions from BPL and other carrier-current systems.

Mirroring his colleagues' enthusiasm, FCC Chairman Michael Powell called BPL "tremendously exciting," although he conceded that BPL has "a long way to go." Powell also said the FCC's OET has worked very hard to try to "get their hands around" the issue of interference and that the FCC would continue its vigilance in that area.

The FCC has posted additional information, including a public notice <http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-243879A1.doc> on its Web site. The Commission is expected to issue the complete Notice of Proposed Rule Making within a few days and will invite comments on it sometime after publication.

Additional information about BPL and Amateur Radio is on the ARRL Web site <http://www.arrl.org/tis/info/HTML/plc/>. To support the League's efforts in this area, visit the ARRL's secure BPL Web site <https://www.arrl.org/forms/development/donations/bpl/>.

==>NEW AMATEUR RADIO BILL COSPONSORS "AN OPTIMISTIC SIGN," HAYNIE SAYS

ARRL President Jim Haynie, W5JBP, says he's encouraged to see additional members of the US House of Representatives agreeing to cosponsor The Amateur Radio Spectrum Protection Act of 2003, HR 713, and the Amateur Radio Emergency Communications Consistency Act of 2003, HR 1478--also known as "the CC&R bill." In Washington this week with an ARRL delegation, Haynie called it "an optimistic sign" for Amateur Radio that League members are continuing to urge their lawmakers to sign aboard the two pieces of legislation, which are ARRL initiatives.

"House members have proven to be very responsive to entreaties from the amateur community to get behind these bills," an elated Haynie said this week. "The campaign continues to pay off in terms of additional cosponsors for our bills." As of this week, 84 House members have gone on record as HR 713 cosponsors. An identical companion bill in the US Senate, S 537, has attracted eight cosponsors.

Among recent House cosponsors of HR 713 are representatives Chris Bell (R-TX), Candice S. Miller (R-MI), Jim Turner (D-TX), Jay Inslee, (D-WA), Ray LaHood (R-IL), Stevan Pearce, (R-NM) and Baron Hill, (D-IN).

Sponsored in the House by Rep Michael Bilirakis (R-FL) and in the Senate by Sen Michael Crapo (R-ID), the bill would require the FCC to provide "equivalent replacement spectrum" to Amateur Radio if the FCC reallocates primary amateur frequencies, reduces any secondary amateur allocations, or makes additional allocations within such bands that would substantially reduce their utility to amateurs. HR 713 has been referred to the Subcommittee on Telecommunications and the Internet. The Senate version, S 537, has been referred to the Senate Committee on Commerce, Science, and Transportation.

Meanwhile, the cosponsor count on the CC&R bill, HR 1478, rose to 32 this week with the addition of Rep Jim DeMint (R-SC), who was approached by ARRL South Carolina Section Manager Jim Boehner, N2ZZ, to consider cosponsoring both HR 1478 and HR 713. Introduced by Rep Steve Israel (D-NY), the CC&R bill would require private land-use regulators such as homeowners' associations to "reasonably accommodate" Amateur Radio antennas consistent with the PRB-1 limited federal preemption.

Recent HR 1478 cosponsors also include representatives Donald Manzullo (R-IL) and Anibal Acevedo-Vila (D-PR). HR 1478 also has been referred to the House Subcommittee on Telecommunications and the Internet.

Although buoyed by the bills' recent cosponsorship progress, Haynie is continuing to encourage ARRL members to send cards and letters to their House of Representatives member urging them to cosponsor HR 713 and HR 1478, and to their state's two US senators to cosponsor S 537.

"There's a long way to go, and that's what it's going to take," Haynie said. "Cards and letters from individual voters do make a difference."

Meanwhile, Louisiana Republican Billy Tauzin's announcement that he'll step down as chairman of the House Energy and Commerce Committee and not run for re-election has set off a political sideshow. On February 6, nearly every committee member urged House Speaker Dennis Hastert to appoint Rep Joe Barton (R-TX) to replace Tauzin as chairman. Barton also serves on the House Subcommittee on Telecommunications and the Internet, but he has not yet signed on as a cosponsor of either HR 713 or HR 1478.

Additional information--including the bills' texts, sample letters and information on how to write members of Congress--is on the ARRL "The Amateur Radio Spectrum Protection Act of 2003" Web page <http://www.arrl.org/govrelations/arspa.html> and on the "HR 1478, The Amateur Radio Emergency Communications Consistency Act of 2003" Web page <http://www.arrl.org/govrelations/hr1478/>.

Those writing their lawmakers on behalf of the Spectrum Protection Act are asked to copy their correspondence to the League via e-mail <specbill03@...>. Those writing their House member on behalf of the Amateur Radio Emergency Communications Consistency Act, HR 1478, are asked to copy their correspondence to <ccr-bill@...>.

==>ASTRONAUT CHATS WITH HIS SON, TEXAS YOUNGSTERS VIA HAM RADIO

Ian Foale, the son of International Space Station Expedition 8 Commander Mike Foale, KB5UAC, was among several other youngsters attending his school who got to ask questions of his dad February 4 via Amateur Radio.
The contact with James F. Bay Elementary School in Houston, Texas, was arranged by the Amateur Radio on the International Space Station (ARISS) program. The third-grader first lobbed a softball question at his dad--"How far is the space station from Earth in miles and kilometers?"--but followed up with a more challenging query about whether the ISS crew could detect changes in land forms on Earth.

"Yes, we can detect changes," his father responded. "They happen slowly over many months, but we can see the snow building up on mountains, and we can see the glaciers developing in the Patagonia area." The elder Foale also said the crew is able to see erosion of earth and mud down rivers into the sea. What the crew cannot see, Foale said in reply to another question, are the great pyramids or the Great Wall of China. While these should be visible, Foale said, they blend in too much with their surroundings.

Foale conceded that living aboard the ISS with only one crewmate can be a lonely experience for both of them. "My hardest adjustment to life here is being away from lots of nice people," Foale said. "I have one crewmate, Sasha, and we are good friends, but we miss other people."

The youngsters let loose with a hearty round of applause as the approximately 10-minute-long contact ended.

Visiting the school for the event and taking part in pre-contact activities were Foale's wife, Rhonda, and his 12-year-old daughter, Jenna, who attended James Bay Elementary in her younger years. Rhonda Foale presented a "video post card" from her husband that offered the elementary schoolers additional insights into daily life aboard the ISS.

Daughter Jenna, meanwhile, told the youngsters about her Aibo <http://www.us.aibo.com/> robotic dog, for which Foale writes programs while aboard the ISS. Astronauts Scott Kelly and Julie Payette also attended the event and answered questions from the pupils about space travel.

ARISS <http://www.rac.ca/ariss> is an international educational outreach project with participation by ARRL, AMSAT and NASA.

==>IT'S MUSICAL CHAIRS AGAIN FOR NEXT ISS CREWS

After replacing the commander of the next International Space Station crew less than a month ago, NASA and its ISS partners now have announced the assignment of an altogether new crew. The Expedition 9 crew now will consist of astronaut Mike Fincke and cosmonaut Gennady Padalka, RN3DT. Padalka, 45, will serve as Expedition 9 commander and Soyuz commander, while Fincke, 36, will be the NASA ISS science officer and flight engineer. They have been training together as a space station crew for nearly two years, NASA said. Their experience as a team was cited as a primary reason for the personnel shift. Expedition 10 crew assignments also will change.

"After a very thorough evaluation by our partners, I'm confident that these assignments make the very best use of our crew resources and skills and will ensure the flights' full success," NASA Chief Astronaut Kent Rominger said.

Fincke passed his Amateur Radio Technician class exam this week--in plenty of time for Expedition 9's April 18 launch from Russia aboard a Soyuz vehicle. Having an US Amateur Radio licensee aboard is necessary if the Amateur Radio on the International Space Station--or ARISS <http://www.rac.ca/ariss>--program is to continue its schedule of school group contacts via NA1SS.

Last November, NASA and Russia had decided on William McArthur Jr, KC5ACR, as Expedition 9 crew commander and cosmonaut Valery Tokarev as flight engineer for the six-month mission. Last month, however, NASA swapped McArthur for Leroy Chiao, due to a temporary medical issue affecting McArthur. Chiao and Russian cosmonaut Salizhan Sharipov now have been assigned to Expedition 10. Chiao also has been studying for his ham radio license while undergoing training in Russia.

This will mark Fincke's first space flight. It's the second for Padalka, who lived aboard the Russian Mir space station for 198 days in 1999.--NASA

==>FCC GIVES SECOND CHANCE TO FORMER LICENSEE

The FCC has given a former Indiana radio amateur another chance to renew his General ticket, which expired in 2000. In an Order on Reconsideration

released February 3, the Commission granted a waiver to Frank R. Michalak, ex-KA9EMU, permitting him to submit a late-filed renewal application. Michalak has 60 days from the Order's release to do so.

In its Order, the FCC dismissed Michalak's petition seeking reconsideration of a December 1999 FCC action that dismissed his license renewal application. Michalak initially ran afoul of the requirement to provide a taxpayer identification number--typically a Social Security number--with his application. Later, he encountered problems using the Universal Licensing System (ULS) and with illness.

The FCC said it had reviewed his request anew using all information it currently had before it in the proceeding. The Commission agreed with Michalak that his situation was sufficiently exceptional to permit him to refile for renewal if he's still interested in being a radio amateur. "Based on such review, we conclude that Michalak should be granted a waiver to permit the filing of a late-filed renewal application," the Commission said.

==>ARRL TECHNICAL RELATIONS OFFICE EYES WRC-07

While it may seem like World Radiocommunication Conference 2003 (WRC-03) was just yesterday, the ARRL Technical Relations Office in Washington already is participating in a new cycle of meetings to prepare for what's tentatively being called WRC-07.

ARRL Chief Technology Officer Paul Rinaldo, W4RI, says ARRL's involvement is in two arenas--the FCC WRC-07 Advisory Committee and its informal working groups (IWGs), and regular meetings of various International Telecommunication Union <http://www.itu.int/home/index.html> "working parties." ARRL Technical Relations Specialist Walt Ireland, WB7CSL, has been especially active as vice chairman of the IWG 4, which is dealing with broadcasting and Amateur Radio WRC-07 agenda items. Ireland also is the convener of US Working Party 6E, which deals with terrestrial delivery in the broadcasting service.

Both groups are focusing on the possible allocation of additional broadcast spectrum in the 4 to 10 MHz band, which, Rinaldo points out, could impact amateur allocations. Additional information on WRC-07 preparations is on the FCC Web site <http://www.fcc.gov/wrc-07/>.

==>JIM WHITE, K4OJ, SK--J7A OPERATION DEDICATED TO POPULAR CONTESTER

The Amateur Radio contesting community is mourning the death of James A. "Jim" White, K4OJ, (ex-K1ZX and ex-WA1NNC), of Seffner, Florida. The well-known ham radio contesting enthusiast underwent heart valve surgery February 11, but succumbed to liver failure the following day. The J7A operation from Dominica during the ARRL International DX Contest (CW) <http://www.arrl.org/contests/rules/2004/intldx.html> February 21-22 will be dedicated to White.

"Jim White, K4OJ, was a dear friend and a continual inspiration to contesting," said George Wagner, K5KG, in announcing the planned on-the-air tribute. "OJ, as we affectionately called him. was always positive and ready to help, inspire, learn, tease, quip, pontificate and challenge all of us."

A member of The Florida Contest Group (FCG) <http://www.floridacontestgroup.org/> which White organized, Wagner, fellow FCG member John Colyard, W4IX, and John Bednar, K3TEJ, will be the J7A operators. Wagner says FCG members will always remember White as the father of the organization, which he founded a decade ago, serving as its first president. "When you see that sea of orange shirts at Dayton, you will remember OJ," he said, referring to the group's brightly hued signature apparel.

An ARRL Life Member and a Headquarters employee during the 1970s, White was the son of Ellen White, W1YL, and the late Bob White, W1CW, both well-known amateurs and former ARRL staff members. Not surprisingly, Jim White worked in the ARRL Contest Branch. Over the years, he also authored articles for National Contest Journal as well as for QST.

After Bob White died in 2002, Jim White established the R. L. White Memorial Operators' Club to keep his father's W1CW call sign active during various operating events. Always sporting a big signal out of South Florida, Jim White shared a multiop contest station with his mother. Ellen White said K4OJ was on the air during the First Class CW Operators' Club <http://www.firstclasscw.org.uk/> Marathon just this past weekend. "His operating abilities were manifest, and he almost always was the first one to volunteer his help, in spite of his declining physical abilities," she said.

White once said he was bitten by the contest bug after being enlisted as the Novice op for the Connecticut Wireless Association's Field Day effort. In the years since, his call sign has turned up regularly in the results of various contests--often at or near the top of the pile.

"I love contesting," he said in his call sign listing on QRZ.com. "There is something about the camaraderie, discipline and knowledge contesting demands that fits me; it doesn't fit everyone . . . but it sure fits me."

In addition to his mother, White's survivors include his wife Theresa and five stepchildren. Per his wishes, there will be no formal service. The family invites memorial donations to the Florida Contest Group White Memorial Fund--now honoring both W1CW and K4OJ--care of Fred Perkins, K4LQ, 3437 Lake Josephine Dr, Lake Placid, FL 33852.

==>SOLAR UPDATE

Propagation guru Tad "(The Sun is Shining Like a) Red Rubber Ball" Cook, K7RA, Seattle, Washington, reports: Solar flux and sunspot numbers were up slightly this week, and average planetary A index was down a little. Unfortunately, this isn't likely a trend, at least over the long term.

Over the next few days expect solar flux to stay around 110, then gradually decline toward 100, where it should stay until around February 22. Due to a coronal hole and a solar wind stream, geomagnetic conditions should remain unsettled to active.

For more information about propagation and an explanation of the numbers used in this bulletin see the Propagation page on the ARRL Web site <http://www.arrl.org/tis/info/propagation.html>.

Sunspot numbers for February 5 through 11 were 109, 98, 92, 74, 81, 78 and 91, with a mean of 89. The 10.7 cm flux was 105.5, 106.7, 111.1, 116.2, 117.8, 116.5 and 114.2, with a mean of 112.6. Estimated planetary A indices were 14, 21, 11, 8, 8, 9 and 26, with a mean of 13.9.

==>IN BRIEF:

* This weekend on the radio: The ARRL School Club Roundup, the KCJ Topband Contest, the CQ WW RTTY WPX Contest, SARL Kid's Day, the SARL Field Day Contest, the Asia-Pacific Spring Sprint (CW), the Dutch PACC Contest, the OMISS QSO Party, the FISTS Winter Sprint and the RSGB First 1.8 MHz Contest (CW) are the weekend of February 14-15. The AGCW Semi-Automatic Key Evening is February 18. JUST AHEAD: The ARRL International DX Contest (CW), the YL-ISSB QSO Party (CW) and the CQC Winter QSO Party are the weekend of February 21-22. The CQ 160-Meter Contest (SSB) is the weekend of February 28-29. See the ARRL Contest Branch page <http://www.arrl.org/contests/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Certification and Continuing Education course registration: Registration for the ARRL VHF/UHF--Beyond the Repeater (EC-008) and ARRL HF Digital Communication (EC-005) courses opens Monday, February 16, 12:01 AM Eastern Time (0501 UTC). Registration remains open through Sunday, February 22. Classes begin Tuesday February 24. To learn more, visit the ARRL Certification and Continuing Education (C-CE) <http://www.arrl.org/cce/> Web page. For more information, contact Certification and Continuing Education Program Department cce@....

* ARRL Emergency Communications course registration: Registration opens Monday, February 16, 12:01 AM Eastern Time (0501 UTC), for the Level III Emergency Communications on-line course (EC-003). Registration remains open through the February 21-22 weekend or until all available seats have been filled--whichever comes first. Class begins Tuesday, March 2. Thanks to our grant sponsors--the Corporation for National and Community Service and the United Technologies Corporation--the $45 registration fee paid upon enrollment will be reimbursed after successful completion of the course. During this registration period, approximately 50 seats are being offered to ARRL members on a first-come, first-served basis. To learn more, visit the ARRL Certification and Continuing Education (C-CE) <http://www.arrl.org/cce/> Web page. For more information, contact Emergency Communications Course Manager Dan Miller, K3UFG, dmiller@..., 860-594-0340.

* Nominations for ARRL ham radio instructor awards due by March 1: The deadline to submit nominations for ARRL's two Amateur Radio instructor awards in March 1. The ARRL Herb S. Brier Instructor of the Year Award <http://www.arrl.org/FandES/ead/award/herb-tor.html> is presented to a volunteer Amateur Radio instructor, while the ARRL Professional Educator of the Year Award <http://www.arrl.org/FandES/ead/award/pey-tor.html> is presented to a teacher who uses Amateur Radio as part of the curriculum or after-school program, or teaches it in an educational institution, such as a community college. These awards honor those hams who put in countless volunteer hours to seek out newcomers and teach them the standards and practices of Amateur Radio. Nominating forms for the Brier award <http://www.arrl.org/FandES/ead/edunom.html?aw_id=7> and the Professional Educator award <http://www.arrl.org/FandES/ead/edunom.html?aw_id=9> are available on the ARRL Web site. Nominations must be received at ARRL Headquarters by March 1. All nominees will be invited to confirm their interest in competing for the award and to submit material documenting their activities. Winners receive engraved plaques and up to $100 worth of ARRL publications.

* President Bush thanks ham radio volunteer: Shortly after stepping off Air Force One February 5 during a visit to South Carolina, President George W. Bush took a few moments to express his appreciation to ARRL member and Charleston County ARES Emergency Coordinator Charlie Hall, K4AOT. "For all Charlie has done for ham radio and the community, he certainly deserves to be put in the spotlight," said his friend Alex Krist, KR1ST. A member of the Charleston Amateur Radio Society and a retired US Army sergeant, Hall, 64, volunteers with a newly formed Community Emergency Response Team (CERT) <http://www.citizencorps.gov/programs/cert.shtm>, a Citizen Corps <http://www.citizencorps.gov/> program. The president shook Hall's hand and thanked him for his efforts on behalf of the community. ARRL is a Citizen Corps affiliate, and in a growing number of localities, Amateur Radio emergency response activities are being incorporated into CERTs.
Hall, who also volunteers with the American Red Cross and a SKYWARN team, was tapped as Charleston County's "official greeter" for the presidential visit mainly because of his Citizen Corp/CERT activity.--some information from Alex Krist, KR1ST, and Jim Boehner, N2ZZ

* AMSAT announces ECHO launch delay: AMSAT-NA President Robin Haighton, VE3FRH, has announced that due to a delay in the delivery of the primary payload to the launch site in Kazakhstan, the launch of the ECHO satellite has been delayed by some three months. "The 'official' launch date is now June 29, 2004," Haighton said. "I assume that this new date is the start of the new launch window, which may last several weeks."--AMSAT-NA

* Six hams set to ride shuttle "Return to Flight" mission: Six Amateur Radio licensees will be aboard when the shuttle Atlantis returns to space--something NASA now says might not happen until 2005. The mission, STS-114--which NASA is calling the "Return to Flight" mission--will be the first since Columbia broke apart February 1, 2003, during reentry following a 16-day science mission. The mishap claimed the lives of seven astronauts--three of them Amateur Radio licensees. NASA has announced the STS-114 crew members as Mission Commander Eileen Collins, KD5EDS; Pilot

James Kelly, KC5ZSW; Mission Specialist Charles Camarda, KC5ZSY; Mission Specialist Wendy Lawrence, KC5KII; Mission Specialist Soichi Noguchi, KD5TVP; Mission Specialist Stephen Robinson, and Mission Specialist Andy Thomas, KD5CHF/VK5MIR. A veteran of three space flights, Collins has logged more than 530 hours in space. During the Return to Flight mission, the crew will test and evaluate new procedures for flight safety and shuttle inspection and repair techniques.--NASA

* Vote on QST Cover Plaque Award: The winner of the QST Cover Plaque Award for January is Rod Vlach, NN0TT, for his article "The Challenge of Being a Little Pistol." Congratulations, Rod! The winner of the QST Cover Plaque award--given to the author--or authors--of the best article in each issue--is determined by a vote of ARRL members. Voting takes place each month on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/qstvote.html>. Cast a ballot for your favorite article in the February issue of QST. Voting ends February 29.

* Three ARRL awards discontinued: Effective immediately, the ARRL Awards Branch has discontinued the Rag Chewer's Club, the Old Timer's Club and the Friendship Award. ARRL Membership Services Manager Wayne Mills, N7NG, says that the number of amateurs applying for awards in general has declined significantly over the years, and interest in these three awards had slowed to a trickle. DXCC and WAS remain among the most popular ARRL Awards, he said, but the eliminated awards "had outlived their interest level." For more information on ARRL awards, visit The ARRL Awards Program page <http://www.arrl.org/awards/>.

* Department of State ham club on the air for Presidents' Day: The Daily DX <http://www.dailydx.com> reports that the Department of State Amateur Radio Club's W3DOS will be on the air February 14-16 to celebrate Presidents' Day. Approximate operating frequencies will be CW: 3.530, 7.030, 10.130 14.030, 18.080, 21.030, 24.910 and 28.030 MHz. SSB: 3.880, 7280, 14280, 18150, 21380, 24.980 and 28.480 MHz.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League--The National Association For Amateur Radio--225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Jim Haynie, W5JBP, President.

The ARRL Letter offers a weekly e-mail digest of essential news of interest to active amateurs. The ARRL Letter strives to be timely, accurate, concise, and readable. Visit ARRLWeb <http://www.arrl.org> for the latest news, updated as it happens. The ARRL Web site <http://www.arrl.org/> offers access to news, informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled from The ARRL Letter.

==>How to Get The ARRL Letter
The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE:
HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

480. Capacity Hats with a Bug Catcher

Yahoo group: Temple_ARC
Date: 2004-02-16 01:56:43 UTC
From: Steve S. Bosshard (NU5D)
Topic: 480 Message: 480
Attachments: 1 described; binary payloads are missing from this source WARC

I have been running a Texas Bugcatcher (6" dia coil - 10" long) for about a year now - it replaced a High Sierra. Most times I operate 75 and 40 fone. The Bugcatcher made a tremendous improvement over the screwdriver. I also used a 16" diameter capacity hat. As such ¾ of the coil was needed on 75 and about ½ of the coil was needed on 40.

I found some leftover 1/8" copper clad rods and decided to add 8 X 18" rods on top of the capacity hat. I used a large flat washer and brazed to rods to the washer forming 8 spokes that I placed above the existing capacity hat. I used tie wraps to hold the rods in place using the store bought hat as a frame for fastening rods. I then used coat hanger rods to join the tips of the rods together.

With this combination, and the hat 16" above the loading coil I was able to cut the number of turns on the loading coil in half.

For bandwidth I have about 10Kc on 75, 50 kc on 40, full band on 20 and 17. I have not tried top band, but looks like am not far from resonance there.

I use a shunt inductor to match at the base of the antenna with about 6 turns of #6 CU on a 1 ½ " form.

The antenna is mounted on the rear bumper of a ½ ton pickup truck with a strut tied back to the tail gate latch peg. The mast section is ¾" stainless, then the 12" X 6" dia loading coil, then a spring plus a 12" section and the 36" diameter capacity hat, then a 60" whip.

Good standing wave on 75, 40, 20, and 17. remove the loading coil and 6M is OK. I do have pretty bad ignition noise on 20M even after grounding the hood and exhaust system. Any ignition noise suppression ideas - noise is coming in through the antenna and not the power wiring - added ferrite to the coax but made no difference.

Video next week,

73,

Steve

To all Slo-scanners,

Want everyone to know we have changed the schedule of our Central Texas Slo-scan and ATV group nets as follows:

MMSSTV Sun 8-10 pm Mon-Thurs 9-10pm

DIGTRX Fri and Sat 9-10pm

Hope everyone will check in and send a picture or 2 whenever you can. We hold the nets all week so you can pick the net you want and spend the time you have available. Hope to see you on one of the evening nets.

I just thought I had a bug catcher...

Wonder if it is OSHA Approved?

NU5D

George's KC5HS's Little Loading Coil.
9 inches in Diameter, 18 pounds and a Q of 475.
The mast is 2 inch diameter, the capacity hat is 6 foot diameter. The
lexan rod is 2 inches in diameter and the lexan support ribs are 1/2
inch thick. Cost of materials and machining is around $ 450.

485. New 147.140 plus offset tone 123.0 Tall KCEN Tower Repeater.

Looks like the new 147.140, plus offset, tone 123.0 W5BEC Repeater is operational on the KCEN TV tower. See N5ZXJ for more information, and give it a try. It should have better performance and coverage than the original 72 installation.

Austin SwapNet 02/22/04 de N5MNW, ARO and AARC. Website:
www.AustinHams.org

Hertzian Cyclists,
Kudos to the BCARC and their fine Swapmeet this past weekend! Another
great
time swapping stories and radio goodies was had by all.
I'm always delighted to hear someone say they enjoy what I write. One
recipient's
favorite thing is to look at the greeting and find out what he's being
called this week.
It's encouraging to know -someone- reads the newsletter! de MNW :o)

I've begun adding the "HamInfo" dummy address in the "To" field.
Please feel
free to use it in filtering rule(s) to avert SPAM. It will be included
in all
Ham Radio Info emails from me.

The South Austin W5YI VE Team will hold a special amateur radio exam
session at
6 PM on February 25, 2004 at the Marimont Cafeteria, 623 West 38th
Street in Austin,
Texas. As always, all exam elements will be available to applicants.
This session is
for those who can not attend our regular sessions on Saturdays and will
start one hour
before the Packet Radio Club meeting at the same location. For more
information,
contact Jim, AB5EK at 512-327-6184 or by e-mail at
hamradioexams@...
73, Jim, AB5EK CVE No. 12165

Lori and I are looking forward to seeing many of you at the upcoming
Skywarn
Advanced Weather Spotter Class Feb 28th at 3M.

Evan- W5IQS has taken a year-long assignment in South Korea. You'll
hear him
frequently checking in to 146.94 on N5SMN's Echolink node. He's very
interesting
to talk to. He and wife Virginia are eager to keep in touch with the
Austin/Horseshoe
Bay Hams. Evan is also an avid DX'er & CW op and has been assigned a
temporary
Korean callsign of HL2/W5IQS. He will send me IOTA specifics on the

island he is on,
along with freqs monitored, etc as time goes by. Please try and work
him!

1st Tue Mtg Mar 2nd 7PM at Marimont- Lewis Thompson, W5IFQ, will discuss
PACTOR
and the Winlink2K amateur radio Internet e-mail system, and their
applications
to emergency HF communications.

2nd Tue Mtg Mar 9th ARL 10000 Burnet Rd- "Check Your Rig's TX" Jeff
N5MNW and
HP8921A will be set up for you to bring your HT's, Mobiles and base
stations for a
Transmitter checkup. Also, a short tutorial on FM deviation, frequency
error and
how these parameters affect on-the-air signals.

If you're not an ARRL member and are considering it, AARC/ARO will
apply
$15 towards your AARC/ARO club dues if you sign up for first-time
ARRL membership through the club! Take advantage of 2003 ARRL signup,
join ARRL and AARC/ARO simultaneously!
Contact John KG5O@... or Roger W5WIA@arrl.net for more details.

494. Update:W5TSG Emergency Relay net

Yahoo group: Temple_ARC
Date: 2004-02-25 00:46:02 UTC
From: Carolyn Black
Topic: 494 Message: 494

Below is the updated information regarding frequencies for the W5TSG Emergency Relay nets held on Wednesday evenings at 7:30 p.m.
Hope to hear you check in.....please note that tomorrow evening, 2/25/04, we will be using the Simplex frequencies. Thanks. 73,Carolyn kd5glm

W5TSG EMERGENCY RELAY NET SCHEDULE

1-Repeater relay nets

Wednesdays 7:30 p.m.

COUNTY REPEATER FREQUENCIES

Bell: 147.180 123 tone

Bosque: 147.180 123 tone

Coryell: 147.180 123 tone

Hamilton: 147.180 123 tone

Hill and surrounding area: 146.780 123 tone

Johnson County: 145.490 88.5 tone

Limestone and surrounding area: 145.390

Williamson and surrounding areas: 146.90

8:00 P.M. McLennan: 147.320 123 tone

2-Simplex relay net

LAST WEDNESDAY of each month:

Feb 25 Mar 31 Apr 28 May 26 Jun 30 Jul 28 Aug 25 Sep 29 Oct 27 Nov 24 Dec 29

All simplex nets start at 7:30p.m.

COUNTY SIMPLEX FREQUENCIES

Bell: 145.555

Bosque: 147.450

Coryell: 147.450

Hamilton: 147.450

Hill: 146.540

Johnson: 146.460

Limestone: 146.550

McLennan: 147.550

497. Ham Radio Classes - April 6, 2004

Yahoo group: Temple_ARC
Date: 2004-02-26 00:15:41 UTC
From: Charlie Schlieper
Topic: 497 Message: 497

The Temple Amateur Radio Club will sponsor HAM RADIO classes, beginning Tuesday evening, 7PM, April 6, 2004. The location will be the usual club meeting location at the fellowship hall of the Western Hills Church of Christ, located on the North-West side of the ADAMS and IH-35 crossover. Classes will meet on Tuesday and Friday evenings, from 7PM to 9PM, and run six weeks.

The CLASSES are FREE, but students are expected to purchase their own study materials. We will order all books for the classes. The cost a book varies according to the class of LICENSE, and usually run about $20.00, or less.

You MUST register for this class by 12 Noon, March 24, 2004. To register, call (254) 773-0608 for Charlie or Kay Schlieper, or e-mail at n5td@....

We will strive to accomodate needs for both UPGRADES and the beginning TECHNICIAN Class of license, based upon needs and available resources.

============================================================

==>FCC PROPOSES RULES FOR BPL SYSTEMS

The FCC this week released its Notice of Proposed Rule Making (NPRM) on
Broadband over Power Line (BPL) systems. The 38-page NPRM--in ET Dockets
03-104 and 04-37--proposes amendments to FCC Part 15 rules to define
so-called "access BPL," make rules specific to BPL systems and provide
measurement guidelines for BPL devices and systems. It would make no
changes to Part 15 emission limits for unintentional radiators, however.
ARRL CEO David Sumner, K1ZZ, says that while Part 15's current limits on
unintentional radiators on HF may be appropriate for short-duration,
narrowband emissions, they are inappropriate for the sort of long-duration,
broadband emissions BPL would employ. He compared short-duration,
narrowband emissions at the Part 15 radiated emission limit to a helicopter
flying overhead.
```

"The noise is deafening, but is tolerable because it doesn't happen very often nor last very long," he observed. "To a radio user, having BPL in the neighborhood would be like having the helicopter hovering constantly overhead."

ARRL Lab Manager Ed Hare, W1RFI, offered an example most hams could relate to. "The limit for an unintentional emitter on HF is 30 uV/m at 30 meters from the source," he said. "If you take a dipole cut for 3.5 MHz and put it in a 30 uV/m field, you'll have a noise reading of S9 plus 16 dB at your transceiver."

The FCC proposal takes a broader view of interference. "There is significant disagreement among the commenting parties regarding the interference potential of Access BPL," the NPRM declares. "Amateur operators and amateur organizations in general are opposed to Access BPL and advocate emission limits that are lower than the existing Part 15 limits."

Still, the NPRM concedes, Amateur Radio operations "are likely to present a difficult challenge in the deployment of Access BPL in cases where amateurs use high-gain outdoor antennas that are located near power lines." Noting that power line noise already presents a significant problem for hams, the FCC said, "we therefore would expect that, in practice, many amateurs already orient their antennas to minimize the reception of emissions from nearby electric power lines."

The NPRM goes on to point out that because BPL has the capability to stay clear of specific frequencies, BPL providers can simply "avoid the use of amateur frequencies when in close proximity to amateur outdoor antennas." The NPRM also briefly mentions the possibility of interference to BPL systems from Amateur Radio, an issue ARRL and others raised in their comments on last April's Notice of Inquiry on BPL.

The NPRM emphasizes that under the proposed rules, operators of Access BPL systems would be responsible for eliminating any harmful interference that may occur. The FCC says it believes current Part 15 emission limits for carrier current systems--in conjunction with certain additional requirements specific to Access BPL--"will be adequate to ensure that existing radio operations are protected against harmful interference."

Sumner suggested that, with licensed services and government users taking up large portions of the HF spectrum, protecting all licensed HF users could prove to be a nightmare for BPL providers. He noted, too, that while the FCC maintains that licensed services must be protected, the proposed rules place the burden of initiating corrective action on the shoulders of the licensed services. "And as a practical matter, the FCC's proposed rules offer no protection at all to mobile and portable stations," he added.

Sumner also said the ARRL would continue to combat the "misconception" that BPL systems are viable as a "last mile" broadband technology for rural dwellers. "In low-density areas, the economics just don't work," he said.

The NPRM is available on the FCC Web site in Microsoft Word format <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-04-29A1.doc> or as an Adobe PDF file <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-04-29A1.pdf>.

Interested parties may file detailed comments on the NPRM via the main FCC's Electronic Comment Filing System (ECFS) <http://www.fcc.gov/cgb/ecfs/>. The comment deadline is 45 days after the NPRM has been published in The Federal Register, and that is not expected to happen for another week or two. The FCC also is accepting brief comments on the NPRM via its ECFS Express page <http://gullfoss2.fcc.gov/ecfs/Upload/>.

Additional information about BPL and Amateur Radio is on the ARRL Web site <http://www.arrl.org/tis/info/HTML/plc/>. To support the League's efforts in this area, visit the ARRL's secure BPL Web site <https://www.arrl.org/forms/development/donations/bpl/>.

==>ARRL SUBMITS TESTIMONY SUPPORTING HAWAII ANTENNA BILLS

The ARRL this week submitted written testimony in support of two pieces of Amateur Radio antenna legislation under consideration in Hawaii. House Bill 2774 would aid Hawaiian amateurs living in subdivisions subject to homeowners' association covenants, conditions and restrictions (CC&Rs). In general, HB 2774 would permit such Amateur Radio licensees in Hawaii to install antennas, feed lines and other telecommunications equipment "directly attached to the owner's residence or other permitted structure on the owner's lot." A second bill, HB 2773, would allow amateur licensees in condominiums to install antennas on their units under certain conditions, without needing permission from a condo owners' association or managing agent.

"These bills would simply assure the ability of federally-licensed Amateur Radio operators to install unobtrusive, basically functional antenna systems without the often arbitrary, or arbitrarily administered, private regulations that routinely preclude Amateur Radio operation," the ARRL said in urging approval of both measures. Passage of the bills, the League asserted, would help to ensure stations would be available to provide emergency and disaster-related communications if normal communications were disrupted.

Both measures are in the Hawaii House Committee on Consumer Protection and Commerce, chaired by their sponsor, Rep Ken Hiraki (D-28). At a hearing on the two bills February 25, amateur operators spoke of the importance of the Amateur Service during emergencies, while representatives of condominium and planned community associations countered with the need to maintain the CC&Rs that all homeowners agreed to follow when they purchased. The committee subsequently voted to defer any decision on the fate of the bills until March 1.

In its written testimony, the League said the two measures contain sufficient protections against adverse effects to neighbors, and "reach a good balance between the legitimate interests of condominium and apartment

owner's associations and homeowner's associations on the one hand, and the clear benefit to the public of available Amateur Radio communications."

The ARRL said the two Hawaii measures apply existing federal principles regarding "reasonable accommodation" of amateur communications to all residences, whether subject to municipal or private land-use regulations. "It would do so in a way as to protect those who might be directly affected, either aesthetically or in other respects, by an antenna installation," the League added.

HR 2774 is similar in intent to HR 1478, the proposed legislation now in Congress that would apply the limited federal preemption known as PRB-1 to CC&Rs on a nationwide basis. If approved, the measures would mark the first legislation on any level to address the restrictions that CC&Rs and homeowners' associations impose to hamper the installation of Amateur Radio antennas.

Hiraki has been urging hams in Hawaii to contact their representatives to champion the legislation. He also is asking amateurs in Hawaii to submit their own comments in support of the bills and the need to pass them.

Address letters to Rep Kenneth Hiraki, Chairman, Committee on Consumer Protection and Commerce, Hawaii State Capitol--Room 320, 415 S Beretania St, Honolulu, HI 96813. Testimony in support of either or both bills also can be sent via e-mail <rephiraki@...> or via fax to 808-586-6181.

Texts of the two bills, HR 2773 <http://www.capitol.hawaii.gov/sessioncurrent/bills/hb2773_.htm> and HR 2774 <http://www.capitol.hawaii.gov/sessioncurrent/bills/hb2774_.htm> are available on the Hawaii State Legislature Web site.

==>FCC KEEPS UP PRESSURE ON ALLEGED UNLICENSED 10-METER OPERATIONS

The FCC is continuing efforts to stem alleged unlicensed operation--primarily by long-haul truckers--on the 10-meter amateur band. Enforcement Bureau Special Counsel Riley Hollingsworth, this month wrote FedEx Corporation CEO Frederick W. Smith enclosing a complaint asserting that some FedEx drivers have used "Amateur Radio transmitters to communicate on the 10-meter Amateur Radio band without a license," Hollingsworth said. The complaint focused on alleged operations in Tennessee.

"Many truckers use CB radio, which does not require a license," Hollingsworth told Smith. "However, any person using a radio transmitter on Amateur Radio frequencies must possess both a station and operator license, for which an examination is required." He pointed out that some truckers have been known to use uncertificated dual-purpose CB radios that also can transmit on 10 meters. CB gear must be FCC certificated, formerly known as type acceptance, but ham radio gear does not need to be. So-called dual-use ham/CB transceivers may not be sold or marketed under FCC rules.

Two additional trucking firms this month were the target of FCC warning notices involving complaints of unlicensed operation on 10 meters. Hollingsworth wrote Carl Leonard Ross of CLR Transport in Saluda, North Carolina, citing allegations that a CLR Transport vehicle traveling on I-85 in North Carolina "was the source of unlicensed radio transmissions on the 10-meter Amateur Radio band on July 14, 2003." Cassidy's Express of Bristol, Pennsylvania, heard from the FCC regarding reports that one of its vehicles was the source of unlicensed radio transmissions while under way in Pennsylvania last October 9.

Hollingsworth asked Smith to advise FedEx drivers that such operation of radio transmitting equipment without a license is a violation of federal law and could subject violators to stiff fines and even jail time as well as seizure of equipment. Pointing out the same penalties for violators, Hollingsworth asked the other two trucking firms to contact him to discuss the allegations.

Earlier this year, the FCC sent warning notices to two shipping companies in the wake of reports to the Commission that some of the companies' vehicles may have been illegally transmitting on 10 meters. At least one of the companies, UPS, offered its full cooperation and promised to investigate.

==>PEGGY SUE GETS LICENSED!

During the recent Buddy Holly W5B commemorative special event operation, Peggy Sue Gerron-Rackham was perhaps the most prominent of the W5B guest operators. The namesake of Holly's 1957 "rockabilly" hit "Peggy Sue"--who went to high school with Holly and later married the drummer in his band, The Crickets--says participating in the W5B event sharpened her desire to get her ham license. That happened this week when the FCC granted her the call sign KE5AKW. She now plans to apply for a vanity call sign.

"Out of all the Buddy Holly events that I have attended in my life," she said after the W5B special event. "This event will always stand out in my memory."

As rock n' roll history has it, Holly originally titled the song "Cindy Lou," but Crickets drummer Jerry Allison convinced the singer to change the tune's name to "Peggy Sue" just before the recording session. Gerron, who still goes by that name, says that story is "close" to the truth but not entirely accurate. After Holly's death, Gerron toured with The Crickets when the band got back together. Holly's follow-up song "Peggy Sue Got Married" inspired a 1986 movie starring Kathleen Turner.

Over the years, Gerron has made public appearances all over the country--including on "Oprah," VH1, the Oxygen Network, as well as network TV, and has worked as a speaker, columnist, back-up singer and talk radio co-host (her show was called "Rave On"). Getting on the air during the W5B special event, however, turned out to be very "special" for her.

"You can do TV specials, and you can be interviewed by the very best DJs," she said, but there is nothing like the feeling of putting your finger down

and transmitting your call sign and having somebody answer back."

The Buddy Holly special event--January 29 through February 2 in Holly's home town of Lubbock, Texas--marked the 45th anniversary of the entertainer's untimely death in a February 3, 1959, plane crash in Iowa. The mishap also claimed the lives of early rock n' rollers Ritchie Valens and JP "The Big Bopper" Richardson.

The Lubbock Amateur Contest Club's W5LCC provided the site for the special event station. Some area hams still remember Holly as a classmate at Lubbock High School. Bryan Edwards, W5KFT, who obtained the W5B call sign, reports W5B logged more than 1000 contacts. The special event generated a lot of interest in talking to Peggy Sue, and she obliged as many as possible. A few shared personal recollections of Holly and his music.

"This is not planned conversation," Gerron said of Amateur Radio. "It's one person communicating with another. Is anybody out there? You bet they are! Keep rockin'!"

Other operators during the W5B special event included Doug Hutton, W5JUV, Terry Bajuk, KE5BL, Dennis Brush, WA5CBG, Joey Johnston, KC5MVZ, Eddie Petmecky, KC5OBX, Davis Plunkett, K5DLP, Rick Roy, KB5KYJ, and Tom Tucker, KB5UOP.--thanks to Mike Gruber, W1MG, who provided information for this article

==>BUNSOLD WINS SAN DIEGO SECTION MANAGER ELECTION

In the only contested ARRL Section Manager race in the current election cycle, Patrick Bunsold, WA6MHZ, of El Cajon, California, has been elected as the ARRL San Diego SM. He outpolled Stephen Early, AD6VI, 378 to 258. Election ballots were counted February 24 at ARRL Headquarters.

Bunsold previously served two terms as San Diego SM--from 1994 to 1998. He'll be stepping into the shoes of current SM Kent Tiburski, K6FQ, who decided not to run for re-election.

Six other incumbent SMs ran unopposed and were declared elected. They are Pete Cecere, N2YJZ, Eastern New York; Eric Olena, WB3FPL, Eastern Pennsylvania; Mickey Cox, K5MC, Louisiana; John Covington, W4CC, North Carolina; Richard Beebe, N0PV, South Dakota and Carl Clements, W4CAC, Virginia.

All successful candidates begin their two-year terms on April 1.

Kevin Bogan, AH6QO, also elected without opposition in the current election cycle as the new the Pacific SM, began his term earlier this year after being appointed to replace outgoing SM Bob Schneider, AH6J, who stepped down before his term ended.

==>N0AX WINS 2003 ORR TECHNICAL WRITING AWARD

The ARRL Foundation has bestowed the 2003 Bill Orr, W6SAI, Technical Writing Award on QST Contributing Editor H. Ward Silver, N0AX, of Vashon

Island, Washington. The action came during the foundation's annual meeting, held via teleconference February 12. The Foundation Board of Directors cited Silver's "fine technical series in QST and other League venues." ARRL Northwestern Division Director Greg Milnes, W7OZ--a foundation board member--will present Silver with a $250 award and a commemorative plaque at an upcoming meeting of the Western Washington DX Club.

"I really am thrilled to win the award because I greatly admired the technical savvy and writing of Bill Orr," Silver said. "I still have several of his antenna books on my bookshelf. His Radio Handbooks were very helpful as companions to The ARRL Handbook, as well."

The award selection is made by the ARRL editorial staff, based on articles published in QST during 2003, that most exemplify the writing philosophy of Bill Orr--that articles should tell a technical "story" that appeals to a broad audience extending beyond those individuals who have a particular interest in the topic.

Silver said that his main goal as an Amateur Radio writer is to light that same spark in other beginners as authors such as Orr lighted for him. "I owe a lot of my writing and drawing style to QST and other League publications, so it is particularly gratifying to be recognized as continuing the tradition," he said.

The avid and well-known contester has authored more than 200 articles for ARRL publications. In 2003, Silver started his popular "Hands-On Radio" series in QST. He is also the editor of the Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the ARRL Antenna Design Course <http://www.arrl.org/cce/courses.html#ec009>, and is the author of N0AX's Radio Puzzler. He's also written feature articles and product reviews for QST, and penned the "Contest Corral" and "Test Your Knowledge" columns in the journal.

"Ward's got a great sense of how to write for beginners," said QST Editor Steve Ford, WB8IMY. "He can take a complicated subject and explain it to anyone. Another great strength is his sense of humor in his writing. Between those two strengths, he can make almost any subject palatable."

==>SOLAR UPDATE

Propagation prognosticator Tad "Don't Let the Sun Go Down on Me" Cook, K7RA, Seattle, Washington, reports: A large sunspot emerged over the past week. On February 21, sunspot 564 began to appear around the east limb of the visible solar disk. By February 23, it was five times as large as Earth. The sunspot was rotating across the upper hemisphere of the sun, so it was never aimed squarely toward earth, but it was most directed toward us on February 25.

Average daily sunspot numbers were slightly higher this week than last. Average daily solar flux was lower by 0.2 point. Solar activity is rising, and solar flux should peak between February 28 to March 1 at around 130. A sunspot currently is forming on the far side of the sun, and it may cause a

slight rise in solar flux around March 8.

Geomagnetic conditions have been very quiet this week. Sunspot 563 released two solar flares on February 26. Earth is expected to encounter a solar wind stream on February 29 or March 1. Planetary A index predictions for February 27 through March 2 are 12, 12, 15, 20 and 20.

Sunspot numbers for February 19 through 25 were 33, 34, 52, 58, 68, 85 and 107, with a mean of 62.4. The 10.7 cm flux was 96.4, 95.4, 98.2, 103.9, 104.3, 105.5 and 118.5, with a mean of 103.2. Estimated planetary A indices were 5, 4, 7, 8, 8, 11 and 8, with a mean of 7.3.

==>IN BRIEF:

* This weekend on the radio: The CQ 160-Meter Contest (SSB), the REF Contest (SSB), the UBA DX Contest (CW), the Mississippi and North Carolina QSO parties, the Russian PSK World Wide contest, the CZEBRIS Contest, the North American QSO Party (RTTY) and the High Speed Club CW Contest are the weekend of February 28-29. JUST AHEAD: The RSGB 80-Meter Club Championship (Data) is March 1; the ARS Spartan Sprint and the AGCW YL-CW Party are March 2. The ARRL International DX Contest (SSB), the Makrothen RTTY Contest, the Open Ukraine RTTY Championship, the DARC 10-Meter Digital Contest are the weekend of March 6-7. The RSGB 80-Meter Club Championship (CW) is March 10, and the Pesky Texan Armadillo Chase is March 11. See the ARRL Contest Branch page <http://www.arrl.org/contests/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Emergency Communications course registration: Registration opens Monday, March 1, 12:01 AM Eastern Time (0501 UTC), for the on-line Level I Emergency Communications course (EC-001). Registration remains open through the March 6-7 weekend or until all available seats have been filled--whichever comes first. Class begins Tuesday, March 16. Thanks to our grant sponsors--the Corporation for National and Community Service and the United Technologies Corporation--the $45 registration fee paid upon enrollment will be reimbursed after successful completion of the course. During this registration period, approximately 175 seats are being offered to ARRL members on a first-come, first-served basis. Senior amateurs are strongly encouraged to take advantage of this opportunity. To learn more, visit the ARRL Certification and Continuing Education Web page <http://www.arrl.org/cce/>. For more information, contact Emergency Communications Course Manager Dan Miller, K3UFG, <dmiller@...>; 860-594-0340.

* Ham radio "personalities" to be W1AW contest ops: ARRL Life Members Joe Walsh, WB6ACU, of the band The Eagles, and ham radio audio expert and manufacturer Bob Heil, K9EID, of Heil Sound will be on hand at Maxim Memorial station W1AW during the March 6-7 weekend to operate the ARRL International DX Contest (SSB) <http://www.arrl.org/contests/rules/2004/intldx.html>. ARRL Contest Branch

Manager Dan Henderson, N1ND, says Walsh--a Rock and Roll Hall of Fame member and Eagles guitarist and vocalist--and Heil will be available to work zero-point contacts with US stations during the DX contest. Walsh is a major benefactor of the ARRL Education and Technology Program <http://www.arrl.org/FandES/tbp/>. He and Heil will be part of a multioperator team that will include Henderson as well as ARRL HQ staffers Dave Patton, NN1N, Mark Spencer, WA8SME, and Mary Hobart, K1MMH, among others. A special W1AW QSL card featuring a photo of Walsh and Heil will be available for those working W1AW during the event. Enclose an SASE when requesting a card. W1AW will not begin DX contest operations until regularly scheduled bulletin and code practice transmissions have ended sometime early Saturday, March 6 (UTC). It's anticipated that W1AW will be on the air for the rest of the contest period, which ends at 2400 March 7, although Walsh and Heil will only operate March 6. Walsh and Heil will tour ARRL Headquarters March 5. It will mark Walsh's first visit to HQ.

* SATERN net assisting with Haiti traffic: The Salvation Army Team Emergency Radio Network (SATERN) Net has activated on 20 meters to assist with health-and-welfare traffic for the troubled nation of Haiti. The net convenes on or near 14.265 MHz. Jim Adams, WA0LSB, is coordinating net control operators for the activation, while Quent Nelson, WA4BZY, is the health-and-welfare team leader. SATERN National Director Pat McPherson, WW9E, says SATERN members are being encouraged to monitor the net frequency and to assist in relaying traffic as needed. SATERN also offers a health-and-welfare link <http://qso.com/satern/emailfrm.htm> on its Web site , for use by those seeking information on family and friends who may be affected by the crisis in Haiti.

* Spacewalk ends early: Russian space officials this week cut short Expedition 8's spacewalk due to a cooling system problem in one of the Russian Orlan space suits. The "extravehicular activity" or EVA ended February 27 at 0112 UTC. Unlike previous spacewalks by ISS crews, there was not a crew member inside the station as the spacewalkers worked outside. Despite the early end to the EVA, Crew commander Mike Foale, KB5UAC, and Flight Engineer Sasha Kaleri, U8MIR, were able to complete nearly two-thirds of their scheduled work. Initial indications are that a kink in a tube in Kaleri's liquid cooling garment was preventing the flow of water through the suit. The spacewalk began February 26 at 2117 UTC and lasted 3 hours 55 minutes. During the EVA, the NA1SS ham gear aboard the ISS remained shut down for safety reasons. There's more information on the NASA Web site <http://spaceflight.nasa.gov/spacenews/reports/issreports/2004/iss04-11.html>--NASA

* UO-11 to mark 20 years in space: UO-11 (also known as UOSAT-2) will turn 20 years old on March 1. To mark the event, AMSAT-UK will issue a commemorative QSL card in exchange for listener reports from stations monitoring the satellite's signal during the month of March 2004. The reports must be posted via the reporting page on the AMSAT-UK Web site <http://www.uk.amsat.org/uo-11/default.php>, and QSL cards will be in the form of a downloadable E-QSL. UO-11 was the second satellite to be launched

by the University of Surrey group headed by Martin Sweeting, G3YJO. Its telemetry beacon can be heard on 145.825 MHz FM using just a handheld radio. UO-11 also has a 2401.5 MHz beacon, although hearing the 2.4 GHz signal could present a challenge. "Depending on the status of the satellite, it sometimes goes into 'safe' mode, and the beacon transmitters are not active for days at a time," said Trevor, M5AKA. "The University of Surrey Ground station staff will attempt to maximize the number of days the transmitters are active during March." More information is available on the AMSAT-UK Web site <http://www.uk.amsat.org/>.

* Charles D. "Chuck" Ritchie, W4BUG, SK: Chuck Ritchie, W4BUG--known as the "BUG of Boca Raton"--died February 13. He was 79. An Amateur Radio licensee since 1947 (originally K2GRM), Ritchie served for 11 years as the ARES/RACES Emergency Coordinator for South Palm Beach County, Florida. In 1999 Boca Raton proclaimed July 13 "Chuck Ritchie Day" and dedicated the city's new emergency communications room he'd helped establish in his honor. Ritchie served two US presidents during his US Army career with the White House Army Signal Agency, where he headed the Press Radio and Television section. During World War II, Ritchie--then a recording engineer in the Public Information Office of Supreme Headquarters Allied Expeditionary Forces in London--set up the microphones and recording gear for General Dwight Eisenhower's announcement of the June 6, 1944, D-Day landing of Allied Forces on the beaches of Normandy. He served presidents Eisenhower and Kennedy before retiring from the Army in 1963. Ritchie also was active in the US Air Force MARS program and handled thousands of phone patches for US troops during the Gulf War. Survivors include his wife, Shirley, N4JKI, and a son.

* Clarification: The story "NPR Feature Spotlights Addition of @ Symbol to Morse Code" in The ARRL Letter, Vol 23, No 08 (Feb 20, 2004), may have incorrectly implied that ARRL Chief Technology Officer Paul Rinaldo, W4RI, originated the idea of adding the "@" symbol to the Morse code. Rinaldo did conceive of the new character--the letters A and C run together--but others had suggested years earlier the need to establish a Morse equivalent for the "@" symbol.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League--The National Association For Amateur Radio--225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Jim Haynie, W5JBP, President.

The ARRL Letter offers a weekly e-mail digest of essential news of interest to active amateurs. The ARRL Letter strives to be timely, accurate, concise, and readable. Visit ARRLWeb <http://www.arrl.org> for the latest news, updated as it happens. The ARRL Web site <http://www.arrl.org/> offers access to news, informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled from The ARRL Letter.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter
The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE:
HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@...
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Greetings ARRL Members of North Texas!

The Irving ARC will be having another Hamfest on Saturday, March 13th from 8:00AM until 2:00PM. There will be plenty of vendors, prizes and fun for all. There will also be ARRL spondored VE testing and a ARRL forum in the afternoon.

You can get more information and register for the Hamfest on-line at http://www.irvingarc.org/hamfest.html. You can also visit http://www.irvingarc.org for more information on the Irving ARC.

I had a great time at this event last year. I hope to see you there on March 13th.

73,
Roy Rabey, AD5KZ

Austin SwapNet 02/29/04 de N5MNW, ARO and AARC. Website:
www.AustinHams.org

Quantum Leap Yearlings,

The 3M auditorium was packed this year by area Emergency Responders,
Volunteer
groups and Amateur Radio operators. All of the local Hams were well
represented by respective ARES officers and Club members. Troy Kimmel
reports he will be taking
an exam soon, so he will be part of our extended family, as are so many
of the local
News and Weather media.

Lori KM5MQ, Lee W5LHC, Charlie KC5NKK and Joe N5HPC will attend the
43rd
Annual Emergency Management Training Conference in Waco. They will be
attending
seminars, doing presentations and manning a display booth where Ham
Radio will be
showcased and demonstrated to Government Honchos. Give 'em a pat on the
back!

1st Tue Mtg Mar 2nd 7PM at Marimont- Lewis Thompson, W5IFQ, will discuss
PACTOR
and the Winlink2K Amateur Radio Internet e-mail system, and their
applications
to emergency HF communications.

2nd Tue Mtg Mar 9th ARL 10000 Burnet Rd- "Check Your Rig's TX" Jeff
N5MNW and
HP8921A will be set up for you to bring your HT's, Mobiles and base
stations for a
Transmitter checkup. Also, a short tutorial on FM deviation, frequency
error and
how these parameters affect on-the-air signals.

4th Tue-Odd Mo. Mar 23rd ARES Face-Face mtg 7PM at Marimont

If you're not an ARRL member and are considering it, AARC/ARO will
apply
$15 towards your AARC/ARO club dues if you sign up for first-time
ARRL membership through the club! Take advantage of 2003 ARRL signup,
join ARRL and AARC/ARO simultaneously!
Contact John KG5O@... or Roger W5WIA@... for more details.

To: hamfests
Subject: West Gulf Division Hamfest Application

ARRL Division: West Gulf
Event Type: Regular Hamfest
Event Date/Time: May 22, 2004 7 a.m. to 3 p.m.
Event City: Belton, Texas
Event Sponsor(s): Temple Amateur Radio Club
Event Facility Type: Bell County Expo Center
Event Facility Address: 201 W. Loop 121, Belton, TX 76513
Directions to Event: >From Interstate 35, take Exit 292, go west on Loop 121 1/4 mile to the Expo Center (to the south of Loop 121).

Special Features of Event: Friday night tailgate parties, group meetings.
Exams being given: ARRL Sponsored Exams
Talk-In Freq: 146.820- (123.0) and 444.700 (123.0)
Advance admission fee: 0
At-door admission fee: 1.00
Table fee: 10 - 25
Event Web URL: http://www.tarc.org/
Public contact name: Mike LeFan
Public contact call sign: WA5EQQ
Public contact address: P.O. Box 4511
Temple, TX 76505
Public contact phone: 254-773-3590 (Mon-Sat, 10 a.m.-9 p.m. - machine answers on 6th ring)

Public contact email: expo@...
Anticipated attendance: 1500 - 2000
Profit disposition: College scholarships, subsidizing club Christmas banquet, sponsoring annual ice cream social, other member benefits.

Date/Time submitted: 27-Feb-2004 2344Z

507. ITEMS LISTED FOR SALE

Yahoo group: Temple_ARC
Date: 2004-03-02 19:23:07 UTC
From: Charlie Schlieper
Topic: 507 Message: 507

Hello All,

I have some ITEMS FORSALE, that might help other HAMS:

1. Complete 550-MHz tabletop COMPUTER, 256Meg RAM, 56X CDROM, Floppy, HARD DRIVE, CALIBRATED SOUNDCARD, 56k Modem, Monitor, Keyboard, Mouse, and amplified SPEAKERS. This system comes with a host of Amateur Radio related programs---Digipan1.8, HamScope, MixW2.11, DIGTRX1.38, DigiPic1, WinPSK31, WinPSK63, Hellschreiber, QuickMix, QuikPSK63, Zakanaka1.24, MMTTY and MMSSTV1.09, MT-63, WSJT4.34, Throb2.5x, Stream, WinWarbler3.0, QSL-Maker, DominoG--variant of MFSK, Scope Analyzer and Digital Frequency Counter programs, multiple Code Practice programs--CW PLAYER, The MILL, NuMORSE1.4, etc., STSPLUS-123 SATELLITE TRACKING program, and ham radio UTILITIES, such as PREFIX FINDER, 555-Timer Design, and Frequency Generator. (Windows 98se)
Price --- $100.00 cash

2. An IOMEGA ZIP250 External USB Drive, with six (6) good 250Mb Zipdisks. Is in very good condition.
(Pricing the above at HALF PRICE, considering what both the Iomega and the Zipdisks presently cost.)
Price --- $120.00 cash

3. A pair of 13-element KLM 2-Meter BEAMS, both in good condition but USED. These are 13-LBA KLM 144-148 MHz TWO METER ANTENNAS. Each YAGI has close to 13-dBd GAIN, and is generally categorized as "15 dBi" in reference sources. Price --- $60.00 EACH, or $120.00 for the PAIR.

4. A 14-Element KLM 2-Meter YAGI ANTENNA. (KLM 144-148-14) Has four Driven Elements, 50-Ohm Impedance with Low-Loss Sleeve Balun included. Beamwidth is 18-degrees, with a published GAIN of near 14-dBd.
Price --- $60.00 cash (Note: the new Coaxial Balun alone cost $60.00)

5. A 200-MHz Intel Pentium COMPUTER, with CDROM, FLOPPY, calibrated Sound-Card for Ham Radio, and contains almost all the Ham Radio programs listed in the 550-MHz listing above, has two Hard Drives in it-- a 1.6 Gb, and a 1.2 Gb HD. This is a "JUNKER" to play with, but works great! Would make a good "SECOND" or "THIRD" hamshack Computer that works great with many of the DIGITAL MODE programs--with the exception of DIGTRX which requires a faster system to decode. This AT case 200-MHz MMX Mini-Tower computer is a stand alone. There are NO accessories included. You would need your own Keyboard, Mouse, Speakers, and Monitor to use this system. It is a working COMPUTER with NO problems. (Windows 98)
Price --- $30.00

6. A CushCraft 2-Meter BOOMER ANTENNA. I think it was 19-elements originally, but I believe this one has ONE element removed from the forward end, and is an 18-element YAGI.
Price -- $75.00 cash

7. A 10-Meter AMPLIFIER, tube type, uses 6BG6 tubes I think? This thing lights up, and puts out some power, but I'm not sure it is working like it should. It was given to me, so my

price is going to be right.... I will NOT let this AMP go to a NON-HAM, so don't even ask.
Price -- FREE.....

This is obviously a hoax. Do not open the attachment!!! Steve is out of town, and I don't have time to look further into it now.

512. A few Tid-Bit NOTES...

Yahoo group: Temple_ARC
Date: 2004-03-03 18:59:06 UTC
From: Charlie Schlieper
Topic: 512 Message: 512

Hello,

THANKS to John, KE5C, for giving us the note about the HOAX on disabled e-mail accounts.

A new version of MixW212.exe is out. (http://mixw.net/files/MixW212.exe)

My two COMPUTERS that I had listed forsale are gone.
They must have been priced right as they both went like HOT CAKES.
(I know there is NOT much of a market for "used" computers, but even
550 to 800MHz systems, if priced right, can still do a lot in Ham shacks.)

The reason for sending a duplicate LISTING the other day is that after waiting two hours for my first message to come back, I decided to send another one. Later, we found out that YAHOO must have been down for a short while, and BOTH of my listings came through.

The TARC program THURSDAY night, 7PM, March 4, 2004, should be an interesting one. K5DOA, Darwin, is presenting "BOATANCHORS WE KNOW AND LOVE." See you at the club meeting.

73, Charlie

Okay, this seems to be W32.Beagle.K@mm:

http://securityresponse.symantec.com/avcenter/venc/data/w32.beagle.k@
mm.html

If you opened the attached zip file *and executed* the file inside
that zip archive, you need to tend to your computer asap. I think,
and I'm not rock-solid on this, that the original message came from
a computer that had both the e-mail address of this group and that
of lampassasrepeater in an address book, so if you meet that
criteria, take a close look at your computer to be sure you are
okay. Even though I don't, I checked for the registry entry and did
an updated virus scan and came out okay. That's more than I really
know.
```

514. North Texas Balloon Project -

Yahoo group: Temple_ARC

MNW Jeff

"The Spirit of Columbia"
NTBP #11
The North Texas Balloon Project flight #11 is planned for launch about 8:30 am on March 13, 2004 from the municipal airport in Hillsboro, Texas, just south of Fort Worth and Dallas. This mission is dedicated to the memory of the astronauts lost a year ago in the Shuttle Columbia tragedy.

The weather balloon carrying amateur radio experiments is expected to reach nearly 100,000 feet in about 90 minutes and return via parachute in about 30 minutes. Mobile recovery teams will use position reports from the onboard APRS on 144.390 MHz and RDF (fox hunting) to recover the payloads.

Set up will begin at 7:00 am with the HF Launch Net on 7260 +/- 10 kHz LSB starting at 8:00 am. The cross band repeater uses an uplink at 445.800 MHz and downlink at 147.560 MHz. Video from onboard cameras is transmitted at 1255.000 MHz for reception by anyone with FM ATV capability.

The public is invited to come out to the Hillsboro Municipal Airport, located at Exit 3 on Interstate Highway 35W, to watch the launch, flight status, and downlink video. In the event of unfavorable weather or jet stream conditions, the launch will occur at a later date. For the latest information check NTBP's Website.
http://www.qsl.net/w5sjz/NTXBalloonproj.htm

Handheld VHF radios and scanners can receive the downlink easily. At the peak altitude ham radio operators from Texas, Oklahoma, Arkansas, Louisiana, and Kansas can contact each other using the cross band repeater.

The radios used normally have a range of about 25 miles, but that range will be extended to about 500 miles at the peak altitude. Two video cameras are used to alternately show the balloon and the horizon. At the peak altitude, the curvature of the earth is visible.

NTBP's Doug Howard said, "This is being done mostly for fun. It involves many different facets of amateur radio and thus a project that many types of amateur radio operators can enjoy together. There is also an educational component utilized by scouting groups, because it involves orienteering and can be counted toward several different merit badges, as well as by teachers for science experiments." According to Howard, Boy Scout troops

from Fort Worth and Benbrook will participate.

NTBP is a group of amateur (HAM) radio operators from Fort Worth and Dallas and has launched balloons from Cleburn, Clifton, and Hillsboro airports since 1991. This is the second launch during the last year and is funded by the amateur radio operators associated with the NTBP.

Please send an email to kd5day@... for further information

Another job opportunity....Gene Preston K5GP

AMD has a posting for an electrical engineer. The following is a description of the position. Any one who has interest should reply to Sal Lara (sal.lara@...).

DESCRIPTION OF POSITION:

Responsible for all phases of facilities electrical engineering. Ensures that proper engineering support for all AMD facilities projects exists. Performs sustaining engineering activities in support of ongoing operations.

Performs with minimal direction. Works with Facilities customers to complete defined projects.

SPECIFIC JOB FUNCTIONS:

KEY FUNCTIONS:

1. Manages and implements all phases of new construction and renovation/upgrade projects including planning, design, construction and start-up. Prepares written project plans which may include budgets, staffing, schedules, procedures and other pertinent project information.

2. Conducts technical project reviews and prepares written comments, analyses and recommendations.

3. Troubleshoots problems with facility systems.

Generates corrective action proposals and recommendations. Manages projects in support of the problems found.

4. Initiates and implements continuous improvement programs through the use of metrics and reporting systems.

5. Manages multiple projects.

6. Provides management with regular updates using established reporting formats.

7. Provides guidance and training to less experienced staff and others as required.

8. Provides standard operating procedures and specifications governing the operation and maintenance of

facility systems and equipment.

9. Reviews and designs electrical distribution improvements.
Designs electrical distributions for fab tool

changes. Evaluates the electrical distribution system to insure
that power quality and quantity is maintained within the defined system
capabilities

10. Performs other functions and duties as assigned.

PROBLEM SOLVING/DECISION MAKING:

1. Assures resolution of problems related to project budget,
scheduling and contract administration.

2. Uses independent judgment to develop and implement approved
engineering solutions to solve complex

electrical system problems.

3. Selects design firms, contractors and equipment vendors as
required to meet or complete assigned projects.

4. Works with other members of the Facilities organization
and/or its customers

to resolve problems.

PREFERRED EDUCATION AND EXPERIENCE:

BS/BA and 5+ years experience in electrical power distribution.
MS/MA/MBA

and 3+ years of electrical power distribution experience

Ham radio user runs interference in neighborhood
Corpus Christi, TX

But upgrades have helped signal avoid his neighbors' finicky home electronics
February 29, 2004

Ann Pittaway, 73, has been hearing voices for three years now, and they're not in her head - they've invaded her telephone, television and computer.

She, her husband of 50 years, Donald, and a few neighbors have been frustrated with a neighbor and his amateur ham radio interference.

"He just doesn't care," Ann Pittaway said Wednesday.

The Pittaways have contacted local police, the previous city manager, legislators, the FBI, the governor's office and enforcement officials at the Federal Communications Commission without success.
The city's building code, section 103.4.4.4, exempts ham radio towers from permits and inspections, provided they don't exceed 50 feet.

The interference culprit, Reid Harding Hill, 33, is secretary of the South Texas Amateur Radio Club. He's one of about 600 licensed amateur ham radio operators in the Coastal Bend.

"It bothers me that these neighbors are upset, but I've done what I can," Hill said.
Hill purchased the Pittaways a blocking device for their phone when they first complained, and the phone company provided a filter, but neither stopped the noise.

Longtime radio club member Ben Bennett, 36, guided the Pittaways to a club meeting a while back to share their complaint. The couple says they were whisked into a back room, where a couple of members talked to them, and they weren't allowed to speak to the group.

Bill Oglesby, 60, a licensed amateur ham radio operator for 45 years, is one of two internal club investigators who police members when transmission interference complaints occur. He interviewed the Pittaways and Hill in an ongoing investigation conducted alongside club member James Hooper.

"The rub comes because of the inexpensive design of some solid-state electronics (purchased by neighbors)," Oglesby said. "Hill is licensed to run a legal operation. But devices he's interfering with are not

being shielding by the manufacturers.
"You couldn't get into an old rotary phone with 10,000 watts," Oglesby said. That's one and half times more powerful than most radio stations, he said. But Oglesby also says a 30-watt transmitter in his own car will blink streetlights when he holds down the button.

"We have not found any technical reasons Hill should be called to task," Oglesby said.

The "buyer beware" problem comes in with the FCC's extensive rules regarding Part 15 devices - a term referring to any household item that unintentionally can cause radio wave interference or malfunction in the presence of other radio waves, including light dimmers, toys, cordless phones and more. Many cheaper electronic items have a sticker warning it is a Part 15 device that might not function correctly if in close proximity to radio waves.

The FCC rules place the responsibility for correcting interference on the device user, i.e. the Pittaways. This can put a ham operator into the unenviable position of explaining to neighbors that the device they bought violates federal law.
Several elements contribute to interference in Hill's case, said Mark Mireles, 45, the radio club's president.
The amount of activity, the frequency used, and the quality of an operator's equipment can contribute to the level of interference near a ham station, he said.

Hill recently upgraded his station equipment with a new transceiver and a horizontal antenna that reduce the interference, Mireles said.

Hill now operates on different frequencies, which has caused less interference for the Pittaways.
He has had his equipment checked by FCC authorities and has added new equipment that enhances his reception and should cause less interference for nearby electronic appliances.

"It cuts both ways," Hill said. "Some hams have their radio bands disturbed by people's touch-lamps, doorbells and other things."

His most recent purchase is called a band-pass filter.

"I didn't buy my new equipment to stop others from having interference, but to keep my signal within the band." Hill said. "But if it helps others' interference concern, it's great."

Ann Pittaway and another neighbor said Friday there has been less interference since Hill upgraded his equipment. They still aren't happy, but now understand they need to watch for Part-15 stickers on items they buy.

If you have problem, contact Mike Baird at 886-3774 or bairdm@....

Subject: Electric and Hybrid Vehicle Hazards

SAFETY BULLETIN 04-03

ELECTRIC & HYBRID VEHICLE HAZARDS

New fuel or engine technologies, such as powerful electric batteries used in electric and hybrid vehicles, pose unexpected risks to law enforcement and other first responders.

A firefighter from Montgomery County, Maryland, noticed something strange recently when he approached a wrecked car. The engine appeared to be off and the injured driver had her foot on the brake. The firefighter was unaware that the engine was still running on silent electric power and could have surged forward, hitting rescuers or bystanders.

The car was a Toyota Prius, a gasoline-electric hybrid vehicle that uses battery power at low speeds. These hybrid vehicles are completely silent when stopped or at low speeds.

In addition to running silently, the battery in a hybrid packs enough voltage to kill a person--more than 500 volts in the 2004 Prius, compared with 12 volts in the standard car battery. In the Prius, the battery is in an unexpected spot, behind the rear seat.

Both Toyota and Honda, the only companies currently selling hybrids, win high praise from rescue workers for marking high-voltage parts with attention-grabbing blaze orange and for engineering their cars with safety in mind. For instance, the powerful batteries are not grounded to the frame, so there is little danger someone could be electrocuted by simply touching a wrecked car.

Other vehicle manufacturers will soon be entering the market of hybrid vehicles. For example, Lexus has scheduled the release of a hybrid RX330 SUV later this year. It is important that all personnel who may come into

contact with a hybrid vehicle are aware of these dangers and take appropriate precautions. Take a few minutes to examine the vehicles you approach to determine if it is an electric or hybrid vehicle. Be cognizant of the high voltage and use caution around the cables and battery.

==>NTIA SPECTRUM MANAGEMENT INQUIRY POSES NO DANGER TO HAM RADIO

Apparently not to be outdone by the FCC's Spectrum Policy Task Force
(SPTF) and resulting proceedings, the National Telecommunications and
Information Administration (NTIA) has initiated its own spectrum management
Notice of Inquiry <http://spectrumreform.ntia.doc.gov/notice.htm>. The NTIA
administers spectrum used by the federal government and advises the White
House in telecommunications matters. Comments on the NOI--which carries the
somewhat unwieldy Docket No 040127027-4027-01--are due by March 18. Some in
the amateur community believe the NOI represents a threat to Amateur Radio.
ARRL Chief Technology Officer Paul Rinaldo, W4RI, says the League is taking
a hard look at the NTIA NOI and its potential impact on the Amateur Radio
Service and will comment formally by the filing deadline.

"In a nutshell, there is no specific threat to the Amateur Radio Service in
this proceeding," Rinaldo said, "unless one considers opening spectrum
```

management to scrutiny as the US government does every so often."

As it did with the FCC's SPTF, the League's Washington office is participating in meetings related to the NOI. On February 12 Rinaldo delivered a presentation on Amateur Radio spectrum management at an NTIA Forum on Spectrum Management Policy Reform, sponsored by the Computer Science and Telecommunications Board of The National Academies.

Among other things, Rinaldo noted that amateurs are concerned about potential interference from unlicensed Part 15 devices, "particularly those that are broadband and distributed throughout residential areas." Such devices, he asserted, should have "globally harmonized bands and standards" designed to preserve a low-noise environment needed for scientific uses and to avoid power escalation in radio services as the noise level rises.

The NTIA released the NOI February 2 in response to a May 29, 2003, executive memorandum from President George W. Bush called "United States Spectrum Policy for the 21st Century." The NTIA NOI now is being viewed as a counterweight to the FCC's SPTF.

The NTIA proceeding is broader than the FCC's SPTF initiative, however, and it poses some fundamental questions--including whether the FCC and NTIA spectrum management functions should be combined in a single entity.

"The League sees this NOI as a healthy opportunity for the airing of views on spectrum management and not a threat aimed at the Amateur Radio Service," Rinaldo concluded. "We appreciate an opportunity to hear members' views."

FCC Chairman Michael Powell and Acting NTIA head Michael Gallagher met February 27 to plan and coordinate the efforts of the FCC and the NTIA on spectrum policy. The meeting included senior spectrum policy teams from both government agencies.

==>ARRL RESPONDS TO WALL STREET JOURNAL ARTICLE ON BPL

The ARRL this week responded to a March 2 Wall Street Journal article, "The Web's New Outlet," that presented a one-sided, rosy picture of Broadband over Power Line while avoiding any mention of its interference potential. ARRL CEO David Sumner, K1ZZ, faxed a letter to the editor of the New York-based business and financial publication to point out some of BPL's shortcomings, which were largely missing from the WSJ report.

"Any listing of the pros and cons of using power lines to deliver broadband services must mention its major disadvantage: it pollutes the radio spectrum, interfering with nearby radio receivers," Sumner said. "The only known exception is a microwave system being developed by Corridor Systems of Santa Rosa, California."

Sumner pointed out that BPL involves sending wideband RF "over unshielded wires that were not designed for the purpose." Owing to the laws of physics, Sumner continued, these power lines function much like antennas,

and BPL signals passing through wires in the vicinity can interfere with radio reception.

"The frequencies in question are used by public safety agencies, the military, aeronautical and maritime services, broadcasters, radio astronomers, radio amateurs, and others," Sumner noted. He said BPL system designers have had only limited success in resolving the interference issue by notching certain frequencies.

"Yet BPL implementation cannot go forward without solving it, because for very good and obvious reasons it is a violation of FCC regulations for a BPL system to cause radio interference," he went on. "If BPL causes interference--and it does--the BPL system must be shut down." Sumner included references to the ARRL's BPL Web page <http://www.arrl.org/tis/info/HTML/plc#video>, which documents HF interference the League monitored at four BPL field test sites last fall.

The WSJ article, in the paper's "Marketplace" section, focuses on the announcement this week of what's said to be the largest rollout to date of BPL by Cincinnati-based utility Cinergy Corp and its BPL partner Current Communications. Cinergy and Current Communications hope to be offering the service to between 60,000 and 1.5 million Cincinnati-area customers by year's end and eventually to some 24 million potential customers elsewhere who are served by smaller utilities.

While the article concedes that BPL "is unproven in wide use," it also cites FCC Office of Engineering and Technology Chief Ed Thomas, who called the technology "ready for prime time." Thomas stopped short of saying that the same was true for the BPL industry, however. It also quotes Cinergy Executive Vice President Bill Grealis, who called BPL "the last-mile solution" and said the service--at between $30 and $40 a month--would be "cheaper and faster than DSL or cable."

A March 5 article about the Cinergy/Current Communications BPL rollout appearing in the Cincinnati Enquirer <http://www.enquirer.com/editions/2004/03/05/biz_cinergy05.html> cites Amateur Radio's concerns, although it also includes comments by FCC and industry sources saying that interference is not a major worry. Featuring a photo of ARRL Ohio Section Manager Joe Phillips, K8QOE, the report quotes the League's comments to the FCC in response to last April's BPL FCC Notice of Inquiry (ET Docket 04-104). Phillips expresses his concerns that interference from RF on unshielded power lines could interfere "with all types of radio transmissions," including emergency agencies.

Sumner, in his letter to the Wall Street Journal, suggested that there are better choices than BPL, even from the standpoint of business and economics. "Potential investors in broadband delivery alternatives to DSL and cable would be far better off considering the various methods of delivering fiber-to-the-home in densely populated areas," he concluded. "For rural areas, adaptations of wireless LAN technology are generally recognized as offering far more promise than BPL."

==>HAM RADIO CONNECTS MICHIGAN, OHIO YOUNGSTERS WITH ISS

Youngsters at schools in Michigan and Ohio were the latest to have an opportunity to interview International Space Station Expedition 8 Commander Mike Foale, KB5UAC, via Amateur Radio. The contacts March 1 with Armstrong Middle School in Flint, Michigan, and February 20 with Glenwood Elementary School in Perrysburg, Ohio, were arranged via the Amateur Radio on the International Space Station (ARISS) program. Foale was at the controls of NA1SS for both QSOs. Originally set for January 12, the Armstrong Middle School contact had to be rescheduled because of the ISS air leak earlier this year. That now-resolved problem was the topic of the first question from an Armstrong student.

"Yes, we did fix it. We found the leak using a special detector that listened for hiss--ultrasound," Foale replied. The leak was from a hose used to keep condensation from building up on a window. "Since then, we've replaced the hose that went to that window, so we don't have the leak anymore."

Another youngster wanted to know what it was like to take off into space from Earth. Foale said the space shuttle offers a harder ride than the much-smaller Russian Soyuz vehicles the crews use now that the shuttle fleet remains grounded.

"It's very very rough," Foale said, describing the shuttle take-off, which he compared to lying on a washing machine in spin cycle with a pair of sneakers inside. "On the Soyuz rocket--the Russian rocket--it's a lot smoother," Foale continued, "but you still feel the same pressure on your chest as the Gs build up. In fact, it's like having three people sitting on your chest at the very end--after eight minutes."

Foale said that during his spare time, he enjoys using the NA1SS station for casual contacts, and he likes taking pictures of Earth--so he'll have something to remember his ISS experience.

Armstrong Middle School Science Coordinator Nannette Wolak selected the students who participated in the contact. Local amateur and ARRL member Duane Fischer, W8DBF, worked with the school and ARISS to make the ISS contact a success. The school, which opened in 1970, was named for astronaut Neil Armstrong--the first human to walk on the moon.

The ISS was over the US West Coast at the time, and W6SRJ at Santa Rosa College handled the direct uplink and downlink, and the students were linked via an MCI teleconference circuit. Bill Hillendahl, KH6GJV, was the W6SRJ control operator.

Glenwood Elementary School Science Coordinator Linda Cutler, KC8RWJ, has been waiting about three years for her students to have a chance to speak with the ISS via ham radio. Among other things, the Glenwood pupils wanted to know about ongoing research aboard the ISS.

"I'm working on experiments that grow plants that make new medicines to fight cancer," Foale said, "and also we're studying how we might make

metals stronger." He noted that plants that can grow in space grow toward the light. He also said that cells grow differently in the zero-gravity of space than they do on Earth.

Space exploration is part of the curriculum at the kindergarten through grade six school, Cutler said. Glenwood pupils were involved with polishing mirrors for the Starshine 3 satellite project a few years ago.

Technical support for the direct contact came from the Wood County Amateur Radio Association and other local amateurs--among them James French, W8ISS, an AMSAT member and ham radio-in-space enthusiast. Larry Reitz, WA8CWD, was the primary liaison between the school and ARISS, and his call sign was used for the Earth station.

ARISS <http://www.rac.ca/ariss> is an international educational outreach program with US participation from ARRL, NASA and AMSAT.--some information provided by NASA, AMSAT, Duane Fischer, W8DBF, and Bill Chaikin, KA8VIT.

==>HAMVENTION PLANNING, PREPARATIONS GOING FULL TILT

Hamvention <http://www.hamvention.org> General Chairman Gary Des Combes, N8EMO, reports all is going smoothly as the 2004 show approaches. Hamvention will take place Friday through Sunday, May 14-16, at Hara Arena in Trotwood, near Dayton, Ohio. The theme for the 53rd Hamvention is "The Year of the Contact."

"Things are going well, and my team is outstanding," Des Combes said in summing up Hamvention's preparations to date. "I really am fortunate to have the best volunteers in the world."

Des Combes says all forum slots have been filled, and about two-thirds of the inside exhibit spaces have been spoken for--which, he points out, is ahead of last year. Des Combes says advanced ticket sales and flea market signups appear to be strong. "We are compiling data now, but demand is very high," he said. Hamvention has another mailing in the works in an effort to attract additional exhibitors. Des Combes also notes that the Hamvention Web site has been upgraded and now provides for on-line, credit card ticket purchases.

Under the banner of its Great Lakes Division, the ARRL will offer a Hamvention forum, "How Grassroots Action Gets Lawmakers' Reaction," on Friday, May 14, 12:15 PM. Moderated by ARRL Great Lakes Division Vice Director Dick Mondro, W8FQT, the forum will feature an introduction by ARRL Great Lakes Division Director Jim Weaver, K8JE, and participation by ARRL General Counsel Chris Imlay, W3KD, who will discuss "How to Influence Congressional Representatives," ARRL New England Division Vice Director Mike Raisbeck, K1TWF, on "Getting State Legislators to Work with Us" and ARRL President Jim Haynie, W5JBP, who's titled his remarks "ARRL: Tighten that Cinch, and Go Do It!"

The annual ARRL Forum gets under way at 8:30 AM on Saturday, May 15. Check the Hamvention Web site <http://www.hamvention.org> for additional details.

==>WEST VIRGINIA HAMS SURPRISE GOVERNOR

It's not often one sees a state governor at a loss for words. Upon learning that the call sign of his late father, Robert Wise Sr, WA8AYP, was going to be used by the ham radio station in the new Kanawha County Metro Emergency Operations Center in Charleston, West Virginia, Gov Bob Wise quietly said, "I don't know quite what to say."

In a February 17 ceremony, Gov Wise prepared to present a $50,000 check to Kanawha County officials to purchase Amateur Radio gear for the new EOC--set for completion next spring. However, he was interrupted by a voice calling him on the ham radio set up in his office for the event. Control operator Bill Hunter, K8BS, identified the station as WA8AYP. When he handed over the mike, the surprised governor responded, "This is the son of WA8AYP."

It was then that Gov Wise learned that the call sign of his father, who died in 1986, had been secured for the ham station at the new EOC. It was an emotional moment. "Thank you very much for remembering Dad," he said. "I can't think of anything that would make him happier." Then he quipped, "Do I get a QSL card for this?"

To the governor's surprise, officials then unveiled a specially designed WA8AYP QSL card and passed out copies, later signed by the governor for the eager hams in attendance.

Kanawha County Commission President Kent Carper, W8CHS, said Amateur Radio operators provide the county with $25,000 to $30,000 a year in free services during disasters.

Some of the state funds also will provide ham gear for a new Mobile Command Center.

On hand was the West Virginia Legislature's only ham radio operator, Kanawha County Delegate Sharon Spencer, KC8KVF, who also serves as the section's ARRL Affiliated Club Coordinator.--Jim Damron, N8TMW

==>ARRL FOUNDATION ELECTS OFFICERS, APPROVES SCHOLARSHIP

The ARRL Foundation <http://www.arrl.org/arrlf/> elected the following officers during its annual meeting, held via teleconference on February 12. President: ARRL New England Division Director Tom Frenaye, K1KI; vice president: ARRL Dakota Division Director Jay Bellows, K0QB; treasurer: ARRL Treasurer Jim McCobb, W1LLU, who succeeds Roger W. Franke, K9AYK; and secretary: ARRL Chief Development Officer Mary Hobart, K1MMH, who succeeds Mary Lau, N1VH.

The change in secretary reflects the first step of a plan to shift the administration of the ARRL Foundation from Field and Educational Services to the ARRL Development Office over the coming months. This will help to align ARRL and Foundation efforts to provide a single contact point for fund-raising activities. The Foundation Board recognized and expressed its appreciation for the exceptional service and support that outgoing secretary Mary Lau has provided to the Foundation over the past 15 years.

In other action, the board approved the adoption of the new Indian River Amateur Radio Club (IRARC) Memorial Joseph P. Rubino Scholarship. Existing funds were transferred to the foundation from the Florida club, which has asked the Foundation to administer the pre-existing scholarship.

==>SOLAR UPDATE

Sun watcher Tad "Sunshine On My Shoulders" Cook, K7RA, Seattle, Washington, reports: Propagation should be good for the ARRL International DX Contest (SSB). Geomagnetic conditions are expected to be quiet, with predicted planetary A index at 10 for Friday, March 5, and just 8 for the following three days. Solar flux is expected to rise to 105 for Friday and 110 for the following three days. Solar flux is currently expected to stay above 100 until March 17.

Average daily sunspot numbers for the past week were up nearly 15 points to 76.9, compared to the earlier week, and average daily solar flux increased more than 5 points. Geomagnetic indices were about double this week over last. A solar wind stream caused this, but no geomagnetic storm erupted. Around March 10-11, Earth should enter another solar wind, and this could cause a geomagnetic storm, possibly lasting until March 12.

Sunspot numbers for February 26 through March 3 were 105, 90, 104, 81, 66, 50 and 42, with a mean of 76.9. The 10.7 cm flux was 120.8, 122.2, 115.8, 110, 101.8, 98.8 and 90.4, with a mean of 108.5. Estimated planetary A indices were 5, 11, 20, 21, 18, 17 and 15, with a mean of 15.3.

==>IN BRIEF:

* This weekend on the radio: The ARRL International DX Contest (SSB), the Makrothen RTTY Contest, the Open Ukraine RTTY Championship, the DARC 10-Meter Digital Contest are the weekend of March 6-7. The RSGB 80-Meter Club Championship (CW) is March 10, and the Pesky Texan Armadillo Chase is March 11. JUST AHEAD: The YL-ISSB QSO Party (SSB), the RSGB Commonwealth Contest, the AGCW QRP Contest, the Oklahoma and Wisconsin QSO parties, the SOC Marathon Sprint, the North American Sprint (RTTY) the UBA Spring Contest (CW) and the NSARA Contest are the weekend of March 13-14. See the ARRL Contest Branch page <http://www.arrl.org/contests/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Emergency Communications Course registration: Registration opens Monday, March 8, 12:01 AM Eastern Time (0501 UTC), for the Level II Emergency Communications on-line course (EC-002). Registration remains open through the March 13-14 weekend or until all seats are filled--whichever occurs first. Class begins Tuesday, March 23. Thanks to our grant sponsors--the Corporation for National and Community Service and the United Technologies Corporation--the $45 registration fee paid upon enrollment will be reimbursed after successful completion of the course.
During this registration period, approximately 60 seats are being offered to ARRL members on a first-come, first-served basis. To learn more, visit

the ARRL Certification and Continuing Education (C-CE) <http://www.arrl.org/cce/> Web page and the C-CE Links found there. For more information, contact Emergency Communications Course Manager Dan Miller, K3UFG, dmiller@..., 860-594-0340.

* Hollingsworth issues interference reminder: FCC Special Counsel for Enforcement Riley Hollingsworth says no Amateur Radio stations are exempt from the requirement to avoid unnecessarily interfering with ongoing communications. "It is very important for all stations, including automated ones, to realize that they are responsible for any interference caused when they come on top of existing communications," Hollingsworth said in response to a recent inquiry. 'There are no exemptions for automated stations." FCC Part 97 <http://www.arrl.org/FandES/field/regulations/news/part97/> Amateur Service rules generally address interference with other communications in §97.101(d): "No amateur operator shall willfully or maliciously interfere with or cause interference to any radio communication or signal." An amateur had written to Hollingsworth alleging that what appear to be automated PACTOR stations routinely start transmitting atop PSK31 QSOs on 40 and 30 meters. The amateur also contacted one of the PACTOR stations in an effort to "dialogue about it not just complain." Hollingsworth expressed the hope that all involved could work things out. He also points out that stations responding to automated interrogations are equally responsible for not causing interference. "It doesn't mean the frequency is clear merely because they were interrogated by another station," he told ARRL this week. "It's a two-way responsibility."

* Bogus ARRL.net messages circulating via e-mail: Several members have notified ARRL that they have received e-mail messages alleging to be from the ARRL E-Mail Forwarding Service <http://www.arrl.org/members-only/emailfwd.html>, "The ARRL.net team" or some variation. The messages, which often carry a subject line along the lines of "Warning about your e-mail account," indicate that the recipient's ARRL E-Mail Forwarding Service <call sign>@... address will be closed within three days because of an alleged violation of acceptable practices. These messages are false and did not come from The ARRL Forwarding Service. They are the result of one of the variants on a number of viruses now permeating the Internet. A file usually is attached to these messages. As always, do not open any attachments that you cannot identify. Opening the file could result in your computer being infected by a virus. This is only one of the several virus-laden messages currently propagating across the Internet. The ARRL advises its members to be cautious in opening any message and/or attachment, even if it appears to be from someone you know. All of these viruses use e-mail addresses from the address book of an infected computer to falsify the "From:" address in the header to make it appear that the message is from someone the recipient knows.

* Musical pioneer Alvino Rey, W6UK, SK: Alvino Rey, W6UK, of Sandy, Utah, died February 24. He was 95 and had been in failing health. An ARRL member, Rey was a well-known musician for several decades and was considered "the father of the pedal steel guitar." Born Alvin McBurney in California and

raised in Cleveland, Rey was an inveterate tinkerer who gained a reputation both as a musician and an electronics whiz who got his ham ticket at an early age. During the Big Band era he was a star of the Horace Heidt and his Musical Knights and later formed his own ensemble.
The Alvino Rey Orchestra's biggest hit, "Deep in the Heart of Texas," came in 1942, but his trademark was novelty music and creating new sounds. At one point during World War II, however, he found himself out of the music business and working as a mechanic in an aircraft factory. He subsequently joined the US Navy and led a service band. Rey and his orchestra were featured during the 1960s' "The King Family Show" on TV, and he was married to Luise King, who died in 1997. An active amateur, Rey and his "talking guitar" performed at more than one ARRL Southwestern Division convention in past decades. "He was great and a lot of fun as well as a long-time League member," recalled ARRL Honorary Vice President and former Southwestern Division Director Fried Heyn, WA6WZO, who also remembers hearing Rey talking to his friends on HF.

* Clifford E. Fay, K7BQ, SK: Cliff Fay, K7BQ, of Peoria, Arizona, died February 28. One of the oldest members of the Amateur Radio community, Fay turned 100 last December 2. An ARRL member, Fay remained active on the air until very recently. He was an active DXer and a regular participant in the Lions Club's annual Hunting Lions in the Air contest. First licensed as 9ARG in 1919 when he was 16 and living in St Louis, Fay had held a ham ticket continuously since then--nearly 85 years. "Cliff was a truly great person," said his friend Ken Hopper, KD7KH. "His mind was sharp as a tack to the very end of his life." Hopper said Fay made arrangements for him to donate his Amateur Radio gear to an organization that encourages young people to become licensed. Survivors include a son, Ted, and a daughter, Barbara. Fay's family requests memorial donations in Cliff Fay's name to the Sierra Winds Charitable Foundation, 17300 N 88th Ave, Box PL 2, Peoria, AZ 85382.

* Hawaii Amateur Radio antenna bills advance: Two Amateur Radio antenna bills under consideration in the Hawaii State Legislature soon will move from a House to a Senate committee, according to their sponsor, Rep Ken Hiraki. House bills 2773 and 2774 would provide for Amateur Radio antennas in housing developments, condominiums and subdivisions governed by covenants, conditions and restrictions (CC&Rs). HB 2773 would allows condominium apartment owners who are licensed Amateur Radio operators to install antennas on their apartment units. HB 2774 would permit the installation of amateur radio equipment in subdivisions. Following a March 1 hearing in the Hawaii House Committee on Consumer Protection and Commerce, committee members amended the bills to have an effective date of 2099, unanimously approved them and advanced them for consideration by a Senate committee. The 2099 effective date will permit additional time for the committees to amend the bills and integrate them with other CC&R-related legislation. The ARRL submitted written testimony on behalf of the measures (see "ARRL Submits Testimony Supporting Hawaii Antenna Bills" <http://www.arrl.org/news/stories/2004/02/27/4/>).

* New 241-GHz distance record claimed: Perennial microwave-band record seeker Brian Justin, WA1ZMS, has claimed a new world and North American DX record for the 241 GHz band. On February 17, WA1ZMS/4 in EM96wx worked W2SZ/4 in FM07fm at a distance of 79.6 km (49.35 miles). The two stations used slow-speed CW (QRSS). Pete Lascell, W4WWQ, was the W2SZ operator. Both stations used Spectran <http://www.qsl.net/padan/spectran.html> software to aid in receiving the slow-speed CW, in which a dit lasted about one second and each dah lingered for three. "The entire QSO took well over an hour to complete, with both stations having to send the exchanges several times," Justin said. "Some portions of the CW were copied by ear, but the DSP software came through in the end to help make the QSO happen." Justin says the QSO marked the fifth grid W2SZ needed for the ARRL VUCC Award <http://www.arrl.org/awards/vucc/> for 241 GHz--the first VUCC on that band. Additional details are on the Mount Greylock Expeditionary Force Web site <http://www.mgef.org/zms_241_vucc.htm>.

* Vote on QST Cover Plaque Award: The winner of the QST Cover Plaque Award for February is Dan Clark, W9VV, for his article " A Historic Receiver from a Radio Pioneer--Fred Schnell." Congratulations, Dan! The winner of the QST Cover Plaque award--given to the author--or authors--of the best article in each issue--is determined by a vote of ARRL members. Voting takes place each month on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/qstvote.html>. Cast a ballot for your favorite article in the March issue of QST. Voting ends March 31.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League--The National Association For Amateur Radio--225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Jim Haynie, W5JBP, President.

The ARRL Letter offers a weekly e-mail digest of essential news of interest to active amateurs. The ARRL Letter strives to be timely, accurate, concise, and readable. Visit ARRLWeb <http://www.arrl.org> for the latest news, updated as it happens. The ARRL Web site <http://www.arrl.org/> offers access to news, informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled from The ARRL Letter.

==>How to Get The ARRL Letter
The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail

delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the "Member
Data Page" link (in the Members Only box). Click on "Modify membership
data," check or uncheck the appropriate boxes and/or change your e-mail
address if necessary. (Check "Temporarily disable all automatically sent
email" to temporarily stop all e-mail deliveries.) Then, click on "Submit
modification" to make selections effective. (NOTE:
HQ staff members cannot change your e-mail delivery address. You must do
this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be
posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@...
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

522. March 8

Yahoo group: Temple_ARC
Date: 2004-03-07 00:19:46 UTC
From: Carolyn Black
Topic: 522 Message: 522

Your are cordially invited to the March 8, TSGARC dinner and program. The TSGARC clubhouse is located at 3292 Speegleville Rd. in Waco, halfway between Highway 6 and Highway 84.

6:00 -7:00 p.m. "Chili Dinner"
7:00 p.m. Program - Hidden Transmitter Hunts known as "Fox Hunting" presented by Larry Bush, W5NCD.

Hope to see you at the March 8 program featuring Larry Bush, W5NCD who will be demonstrating hidden antenna locating (foxhunting) which is not only a family fun thing but useful in emergency settings. Bring your family, enjoy a great meal, fellowship and an introduction to something new to lots of us.
A note about next month.....April 12th will feature Kenneth Winkler; Director of the Texas Army Mars who will speak on the MARS operations as it pertains to Homeland Security and its basic mission. Also several of the guests will include; Col. Charlie Miller G-3 Operation HQ. TSG, Col. Bob Clark, Commander 2n Brigade, TSG and Col. Richard Garcia, Liaison Officer for the Texas State Guard Medical Ranger Corp. This will be a real informative program for those interested in the roll of communications in Homeland Security and other emergency operations affecting our communities.

73s, Leon K5ZZM

533. Off Topic Issues & Mobile Operation

Yahoo group: Temple_ARC
Date: 2004-03-10 12:11:38 UTC
From: Anthony Mikulastik
Topic: 533 Message: 533

I signed up to this reflector because it is about local amateur radio. If I wanted to be kept informed about other topics I would join their reflector. There is a time and place for every thing, this place is for amateur radio related topics only.

The Ameritron ALS500m mobile amp is working well with Hi-Q Antenna. The amp has not "tripped out" even at full power with the Hi-Q Antenna. Looks like a good combination for mobile operation.

De WB5TTY,

Anthony Mikulastik

From: Steve Bosshard
Topic: 533 Message: 534

Well,

I run the drive on the IC706 at about #5 Setting and the amp (ALS500M) does not trip out - I do notice a significant difference in VSWR depending on surrounding conditions, ie., going under an overpass really affects 75 M and the steel in my concrete driveway causes a different tuning point than City asphalt and roadbed. The long bridge on the Leon River made a big change in VSWR on 40 today.

Also for taps on the matching coil I found some 3/16" brass tubing at Hobby Lobby that was just right to accept a banana plug, and soft enough to flatten one end and wrap around the coil winding and solder. This beats $4 or $5 per adjustable tap. With the bugcatcher I have 8 turns of #6 CU on a 1 1/2" dia form shunt to ground for 75 thru 17, except 40M only needs 3 turns, so I have a tap point and jumper to ground - the rest of the bands use the full 8 turns. I have 15 KC bandwidth on 75, 80 Kc on 40, and full band on 30, 20 and 17 Meters. Also I have Hustler resonators (thanks to N5OOH) for 10, 12, and 15M, and these bands use only 2 turns on the shunt coil.

To accomodate changing frequencies on 75M , I have several taps.

Also, in a comparison test there is practically no difference in signal between a 5" Hi Q (Stealth) and a 6" bugcatcher, (althought there is some difference in $$$).

If I band hopped a bunch the motorized antenna would be a better choice, but for the most part I stay on 40M daytime and 75 Night, and the convenience of setting a jumper and operating beats using a motor up and down to find resonance while driving. I have used a High Sierra in the past, but prefer the Bugcatcher.

73,

Steve

PS - I still want to try running braid from coax over my whip and see if the bandwidth increases - W5OMR's suggestion.

536. New Digtrx 1.41 - March 12, 2004

Yahoo group: Temple_ARC
Date: 2004-03-12 19:55:34 UTC
From: Charlie Schlieper
Topic: 536 Message: 536

A new Version of DIGTRX Version 1.41 was just released today, March 12, 2004.

For those who haven't yet tried out the "SUSPEND" feature of Digtrx 1.41, the program now allows you to setup four of your favorite programs to select (inside Digtrx), without closing down the program. I chose the following: MMSSTV, MixW, DigiPan, and MMTTY. When setting up the program choices, be sure and check the "Suspend DIGTRX" box. This allows other selected programs to use the same COM-PORT and SOUND-CARD, without exiting the Digtrx program.

Upon closing out a secondary program, either hit "F4" or toggle the "SUSPEND" block in Digtrx with your mouse-- to make the Com-Port and Sound-Card active again in Digtrx.

For convenient reference, here are the "FUNCTION" codes:
Record = F2
Decode = F3
Suspend = F4
MMK = F5
BBR = F6
AGC = F7
WF = F8
Call ID = F9
1750 Hz = F10
Tuning = F11
Transmit = F12

A ten-band improved version of Digtrx is expected in the near future. The wider WATERFALL was changed in preparation for it. You might want to checkout the new WYMAN modes in Digtrx1.41, and note that many of the selection blocks in this last release have changed to new locations.

537. New DIGTRX "Suspend" feature

Topic: 537 Message: 537

A new Version of DIGTRX Version 1.41 was just released today, March 12, 2004.

For those who haven't yet tried out the "SUSPEND" feature of Digtrx 1.40, the program now allows you to setup four of your favorite programs to select (inside Digtrx), without closing down the program. I chose the following: MMSSTV, MixW, DigiPan, and MMTTY. When setting up the program choices, be sure and check the "Suspend DIGTRX" box. This allows other selected programs to use the same COM-PORT and SOUND-CARD, without exiting the Digtrx program.

Upon closing out a secondary program, either hit "F4" or toggle the "SUPEND" block in Digtrx with your mouse-- to make the Com-Port and Sound-Card active again in Digtrx.

For convenient reference, here are the "FUNCTION" codes:
Record = F2
Decode = F3
Suspend = F4
MMK = F5
BBR = F6
AGC = F7
WF = F8
Call ID = F9
1750 Hz = F10
Tuning = F11
Transmit = F12

A ten-band improved version of Digtrx is expected in the near future. The wider WATERFALL was changed in preparation for it. You might want to checkout the new WYMAN modes in Digtrx1.41, and note that many of the selection blocks in this last release have changed to new locations.

538. Unkind Words between TARC Members at Coffee

Yahoo group: Temple_ARC
Date: 2004-03-13 19:38:22 UTC
From: Steve Bosshard
Topic: 538 Message: 538

At Mc Donalds this morning - some very unkind comments between a couple of TARC members.

It sort of went like this:

Charlie to Kay "Honey, I think we ought to do something for Spring break."

Kay's response, (without skipping a beat) " Sweetheart, your Spring is already broken!"

Take due notice. We really need to improve the decorum at our gatherings.

73,

Steve

The ARRL Letter
Vol. 23, No. 11
March 12, 2004
***************

IN THIS EDITION:

* +North Carolina hams get face time with FCC chairman on BPL
* +ARRL welcomes visit by Joe Walsh, WB6ACU, and Bob Heil, K9EID
* +Middle schoolers put NA1SS in their log
* +Hawaii ham radio antenna bills attracting mainland's attention
* +Weak signal raises hopes for AO-40's revival
* +Ham radio community aids injured amateur
* +Bob Sutherland, W6PO, SK
* Solar Update
* IN BRIEF:
This weekend on the radio
ARRL Emergency Communications course registration
+Scott Redd, K0DQ, heads to new job in Iraq
Congressman-ham gets father's call sign
Barton replaces Tauzin
HQ staffers get IC-7800 preview
Eastern VHF/UHF Conference set for April

+Available on ARRL Audio News

==========================================================

==>A CLOSE ENCOUNTER OF THE BPL KIND WITH FCC CHAIRMAN

A Broadband over Power Line (BPL) home demonstration in the Raleigh, North
Carolina, area March 5 provided an opportunity for area amateurs to take
their concerns about the technology to FCC Chairman Michael Powell face to
face. While ARRL Public Information Officer Gary Pearce, KN4AQ, doesn't
believe his brief encounter with the FCC head and amateurs' longer
discussions with Commission and electric utility staffers will stop or slow
the seeming BPL juggernaut, they were valuable anyway.

"We consider the day successful in the context that we were able to speak
directly with several high-level FCC officials, key Progress Energy
officials and the CEO of Amperion--a BPL provider," Pearce said.
"Long-term success will be measured by how much of a problem BPL poses to
Amateur Radio, or how much of a problem is avoided."
```

While Pearce says he only spent about 30 seconds with Powell, he did tell the chairman that amateurs believe BPL's interference potential has been understated and will prove more difficult to resolve than the FCC has suggested in its February BPL Notice of Proposed Rule Making (NPRM). "What I didn't know when I talked to him," he added, "was that a question that we had sent to the local newspaper had been posed earlier in the day at a press conference about interference."

Powell had responded to the question by saying the FCC would not let BPL interfere with critical services, the Raleigh News & Observer reported. "The question is whether it does, and to what extent, and what limits can be placed to make sure it doesn't," Powell said. "We've been fully committed to only allowing things within the range of what we're convinced won't create impermissible interference."

But Powell went on to say that if BPL can provide broadband access anywhere there's a power outlet, "We're not going to be easily dissuaded from doing something that has that much potential."

Progress Energy and BPL partner Amperion now are operating three field test sites in Wake County south of Raleigh. Acting on a tip, Pearce and several other area amateurs--ARRL Technical Specialist Frank Lynch, W4FAL, among them--showed up at the prearranged BPL demonstration at a residence near Fuquay-Varina.

While Pearce witnessed the demo inside, others, including Wake County ARRL Emergency Coordinator Tom Brown, N4TAB--an engineer--stayed outside to chat with Powell Senior Legal Advisor Chris Libertelli. Brown said the "outside" delegation reiterated the amateurs' belief that BPL industry claims are misstated and wrong. "Overall," he said, I think we were successful in illuminating a few issues and opening more doors instead of closing them."

Pearce told ARRL that a few hams--most a half-mile or so away from the field test sites--already have identified BPL interference on 10 and 12 meters. But he was unsuccessful in getting Powell or others in the FCC delegation to take a quick spin in his mobile radio-equipped vehicle to show him what BPL sounded like "from our perspective." The FCC officials suggested instead that the amateurs arrange a similar demonstration in Washington.

Pearce and Brown believe that BPL is not technologically mature enough to ensure the sort of "interference mitigation" the FCC envisions in its NPRM. "Everyone is relying on the vendors' claims that their technology can solve all the problems," Pearce said. Brown concurred. "It's not anywhere near as adaptive as they would lead you to believe it is or want you to--by absence of further information--allow you to delude yourself,"
he said. "It's not there yet."

Pearce said he was happy to be able to put "a human face" on Amateur Radio's side of the issue. "We know they heard us and that we made a good impression," he said. "We hope it was a deep one as well."

==>EAGLES' JOE WALSH, WB6ACU, ENJOYS FIRST VISIT TO ARRL

Well-known amateur and musician Joe Walsh, WB6ACU, of The Eagles, this week visited ARRL Headquarters for the first time in his 43 years as a ham. Accompanying Walsh to Newington March 5 and 6 was ham radio audio expert and manufacturer Bob Heil, K9EID. Both are ARRL Life Members.
Besides touring ARRL, Walsh and Heil spent part of their weekend operating W1AW with ARRL staff members during the ARRL International DX Contest (Phone).

"I'm looking forward to a pileup," Walsh said beforehand. He says he was bitten by the contest bug during a visit to the station of Ali Al-Futtaim, A61AJ, in the United Arab Emirates. "There were 50 guys at a time calling me, and before I knew it, I looked up and three hours had passed and I'd been logging 350 QSOs an hour," he recalled. "Then I realized what [contesting] was all about. It was like, 'Wow!' You just have to do it to understand how much fun it is."

At W1AW, Walsh hopped from band to band working the contest, while Heil took the quieter route of ragchewing on 17 meters. He also assisted the contest effort by repairing a couple of headsets. Walsh and Heil at one point put W1AW on AM on 40 and 75 meters. During the contest, more than a few operators took a moment to say hello to Walsh or to tell them they were fans.

Walsh said his HQ tour proved to be an eye opener. "You read all the different things in QST--the DX columns and technical articles--but people don't realize that there are a number of departments, and they're staffed with real people, the many people that it takes to put out QST and provide [member] services."

Walsh also marveled at Hiram Percy Maxim's rotary spark gap transmitter "Old Betsy," now residing in the W1AW lobby. "It's special just sitting here at W1AW, soaking up 100 years of Amateur Radio," he remarked. "It's everything I expected it to be, and I've met a lot of great people."

Walsh, who's also performed with The James Gang and enjoyed a solo career, says he got into Amateur Radio in 1960, shortly after moving to New York. Becoming a radio amateur was a pivotal point in his life, he said, and his personal experience was one of the reasons he's become a donor to the ARRL Amateur Radio Education and Technology Program <http://www.arrl.org/FandES/tbp/>. Recalling how the kindness of his Elmer, Jim Walden, then W2IEY and now W6ESJ, had enriched his life back when he was the new kid in town, Walsh said he wanted to somehow pay it back.

"I feel that I need to pass that kindness along and that's why I got involved in the Education and Technology Program," he said.

Walsh said he envisions "some kid like me--new in town and new in school--and there's going to be a ham station there. I want there to be something there for him." Walsh said he worked hard for his license, and he's enjoyed Amateur Radio over the years.

"I don't want those traditions and that fellowship to be lost," he said. "I'll do what it takes to have that survive."

More information about Walsh's and Heil's visit is on the ARRL Web site <http://www.arrl.org/news/features/2004/03/11/1/>. A commemorative QSL card is available for those who worked W1AW during the contest. QSL requests go to W1AW, 225 Main St, Newington, CT 06111. Please include a self-addressed, stamped envelope with each request.

==>SOUTH CAROLINA MIDDLE SCHOOLERS LOG SUCCESSFUL SPACE CONTACT

Students at a South Carolina middle school who spoke via ham radio with the International Space Station this week enjoyed the experience so much they're already eager to do it again. On March 8, youngsters at DuBose Middle School in Summerville questioned ISS Crew Commander Mike Foale, KB5UAC, about life aboard the space outpost. The contact was arranged via the Amateur Radio on the International Space Station (ARISS) program. Operating from NA1SS, Foale told the sixth through eighth graders that he was able to see prominent features of South Carolina from his vantage point in space. He said the ISS crew can see eclipses and other planets in space as well.

"The moon just went by Jupiter, and it was really an amazing sight to see as I was going into the dark side of Earth," Foale said. The ISS was passing above the US West Coast at the time. In a follow-up reply, he described the inky darkness of the cosmic void and how stars and planets appear. "It is totally black in space," he said. "There are some parts of space where there are no stars visible at all, because there are gas clouds out there in the galaxy. And that is so dark, it's hard to imagine." Foale said stars appear brighter and more colorful from space than they do from Earth.

One youngster wanted to know if astronauts could wear such appliances as hearing aids, braces or contact lenses in the zero-gravity environment of the ISS. "Actually, I wear ear plugs just because it's noisy up here," Foale replied. "If I had braces, they wouldn't be a problem, and lots of astronauts do wear contact lenses."

As he's indicated in past ARISS school group contacts, Foale said he "absolutely" would like to participate in a future mission to Mars, but he said he expected that job would fall to younger generations. "I do believe you and your classmates and your friends have a better chance of doing that than I do," he said.

When the 10-minute contact was done, DuBose eighth-grade science teacher Alene Wilkins, KG4NKD, called it "the best experience I have had since I started teaching."

Bill Hillendahl, KH6GJV, and Herb Sullivan, K6QXB, handled Earth station duties at W6SRJ in California. An MCI teleconference circuit relayed two-way audio between the two coasts.

ARISS <http://www.rac.ca/ariss> is an international educational outreach program with US participation from ARRL, NASA and AMSAT.--some information provided by Charlie Sufana, AJ9N

==>MAINLANDERS KEEPING EYE ON HAWAII AMATEUR RADIO ANTENNA BILLS

Two Amateur Radio antenna bills are continuing to progress through the Hawaii State Legislature. House Bill 2773 would allow Hawaiian amateurs living in condominiums to install antennas on their units under certain guidelines. HB 2774 would permit antenna installations, with conditions, by Hawaiian amateurs living in subdivisions subject to homeowners' association covenants, conditions and restrictions (CC&Rs).

The progress of both bills also is under close scrutiny by amateurs on the mainland. The ARRL submitted testimony on the bills' behalf when they were heard last month by the Hawaii House Committee on Consumer Protection and Commerce, chaired by their sponsor, Rep Ken Hiraki.

ARRL Pacific Section Manager Kevin Bogan, AH6QO, says the two measures passed a third reading in the House and are continuing their legislative journey in the Senate, where they passed first reading March 9. The bills likely will be referred to the Senate Consumer Protection and Housing Committee.

"Several hams are working on the text of amendments to the bills, so the bills aren't as broad and will have more chance of passing," Bogan said. What he termed a "small working group of hams" also plans to visit committee members to acquaint them with the bills, once they're referred, ask for their support and answer questions. Bogan is calling on Hawaii amateurs to draft e-mails or letters to their state senators or to even visit them, if convenient.

"We aren't preparing form letters as we feel it is much more effective to say it in your own words," he added.

Bogan is asking hams in Hawaii to develop written testimony in preparation for an eventual Senate hearing and to attend the hearing, once scheduled. He reminded amateurs to be sure to reference the bill numbers and their descriptions when writing lawmakers and to clearly state why they're seeking their support. He also asked amateurs to e-mail <kbogan@...> him to report any correspondence or contacts with lawmakers regarding the bills.

Both bills are available on the Hawaii State Legislature Web site: HB 2773: <http://www.capitol.hawaii.gov/site1/docs/getstatus2.asp?billno=HB2773>; HB 2774: <http://www.capitol.hawaii.gov/site1/docs/getstatus2.asp?billno=HB2774>.

==>A GLIMMER OF HOPE FOR AO-40

A weak "noise" on the AO-40 2.4-GHz beacon frequency has raised hopes that AO-40 may still be alive. AO-40 has been silent since January 27 (UTC), in the wake of a precipitous voltage drop. The satellite's controllers believe that one or more shorted battery cells are at the root of the problem.

Colin Hurst, VK5HI, of the AO-40 command team reports that on March 9 between 0310 and 0320 UTC (orbit 1541) he "noted a noise peak of 4 to 5 dB"

in the vicinity of the expected beacon frequency after he'd issued a transmitter reset command sequence to the satellite. After listening for about 15 seconds, he issued a command to shut down the transmitter, and the noise disappeared. Hurst said he also transmitted several commands involving the auxiliary batteries but did not attempt to turn the beacon on again.

"This tends to suggest that the IHU [Internal Housekeeping Unit computer] and L Band [1.2 GHz] receiver are operational," Hurst said.

The AO-40 command team theorizes that a cell in the main battery pack has shorted, clamping the bus voltage below the point where it can operate the satellite. The spacecraft's auxiliary batteries are believed to be in parallel with the main batteries, and AO-40 Earth stations have been attempting to command the satellite to switch to the auxiliary batteries.

Updates on AO-40 are available on the AMSAT-DL Web site <http://www.amsat-dl.org/journal/adlj-p3d.htm>.

==>HAM COMMUNITY RALLIES TO HELP INJURED AMATEUR

The Amateur Radio community has rallied to the aid of well-known Colorado 6-meter operator and ARRL member Mike Newbold, K0YO. Newbold, 52, is recovering from injuries he received last December in Baja, Mexico, at the hands of assailants who beat him savagely, stole his vehicle and radio gear--virtually everything he owned was in his pickup truck--and left him for dead. Now back home, he's had lots of support from the amateur community.

"My ham friends are some of the best in the world," Newbold said. "I am making great progress on a long road which is made easier by their kindness." His main physical problem is his eyesight, which suffered as a result of head injuries received in the attack. Most of his medical expenses are being covered.

Newbold's friend Gary Yantis <gyantis@...>, W0TM, has been tracking Newbold's progress and set up a Web page <http://www.w0tm.com/k0yo> that provides information for those interested in assisting K0YO. "Well wishes have meant as much, or more, to Mike than replacement of any of the items that were stolen," Yantis says. "He mostly needs to hear from people who care."

Newbold retired early from coal mining due to medical problems that have kept him largely unemployed. He resides in modest circumstances in a remote area, and ham radio, which Newbold took up in 1995, has provided him with "a window to the world," Yantis said. Newbold's son, Travis, is KC0VQJ, and the two sometimes keep in touch via ham radio. K0YO is also an avid QRPer, DXer and CW op, among other things.

One bright spot for Newbold when he returned home from his hospital stay in California was a QSL card from Hawaii--the last one needed for Worked All States on 6 meters.

Cards, letters or e-mails can be sent to Mike Newbold <newbold@...>, 27200 Rte 14, Oak Creek, CO 80467.--some information provided by Phil Kirchbaum, N0KE

==>MOONBOUNCE PIONEER BOB SUTHERLAND, W6PO, SK

Robert I. "Bob" Sutherland, W6PO (ex-W6UOV), of San Mateo, California, died January 11. He was 78. An active VHF-UHF operator in the 1960s through the 1980s, Sutherland was on the West Coast end of the first Amateur Radio moonbounce (EME) contact in 1960 when the Eimac Radio Club's W6HB and W1BU worked each other on 1296 MHz EME. An employee of tube manufacturer Eimac for nearly 50 years, Sutherland developed some of the more famous Eimac tube-based amps.

"His contributions to the Amateur Radio field are legendary," said well-known VHF-UHF and EME operator Dave Olean, K1WHS. Olean says that while most amateurs know Sutherland for his EME work and his Eimac accomplishments, "most of his great deeds went unnoticed by many except for the legion of moonbounce operators whom he helped along the way." Olean says he was one of them, recalling how Sutherland helped him set up an EME station for 432 MHz.

An ARRL member, Sutherland authored several articles for Ham Radio magazine, including "Design Data for a Two-Kilowatt VHF Linear" in 1969 and "High-Performance 144-MHz Power Amplifier" in 1971. He also wrote "A High-Power Cavity Amplifier For The New 900-MHz Band" for QST in 1982. Sutherland was the recipient of the Central States VHF Society's John T. Chambers Award in 1977 for "his dedicated efforts in bringing EME technical information to amateurs worldwide through distribution of the famous Eimac EME Notes," which remain in circulation within the EME community along with his amplifier designs.

Former QST "The World Above 50 MHz" Editor Bill Smith, W5USM, recalled Sutherland as "a modest, kind man of considerable intelligence with passion for his professional and Amateur Radio work." He credited Sutherland with much of the success moonbounce enjoys today. "He was accessible and willing to help," Smith said, adding, "I suggest looking toward the moon and saying, 'Thank you, Bob. Well done.'"

==>SOLAR UPDATE

Sun gazer Tad "Tequila Sunrise" Cook, K7RA, Seattle, Washington, reports: Average daily sunspot numbers dropped from the week February 26-March 3 by nearly 24 points, and average daily solar flux was about the same, down by slightly more than two points. On March 9, Earth passed into a solar wind, and geomagnetic indices rose. At mid latitudes HF bands were probably usable on March 9 and 11 but not on March 10. In Alaska, however, the bands probably sounded dead.

This propagation--or lack of it--is normal for Alaska, at least when geomagnetic conditions are active or stormy. Those magnetic lines of force converge toward the poles, and all that energy gets concentrated, yielding polar cap absorption. The convergence and concentration was intense enough

this week that aurora was visible down into northern parts of the "Lower 48."

Over the next few days geomagnetic conditions should settle down. Predicted planetary A index for March 12-15 is 20, 15, 10 and 8. Solar flux should drop down to around 100 by the beginning of the week (Monday, March 15).

A large sunspot, number 570 is moving into the center of the visible solar disk, directly facing Earth. It is a possible source of flares.

Sunspot numbers for March 4 through 10 were 53, 55, 61, 53, 55, 40 and 56, with a mean of 53.3. The 10.7 cm flux was 97.5, 106.7, 104.5, 106.1, 107.8, 108.7 and 112.6, with a mean of 106.3. Estimated planetary A indices were 7, 8, 5, 6, 6, 21 and 40, with a mean of 13.3.

==>IN BRIEF:

* This weekend on the radio: The YL-ISSB QSO Party (SSB), the RSGB Commonwealth Contest, the AGCW QRP Contest, the Oklahoma and Wisconsin QSO parties, the SOC Marathon Sprint, the North American Sprint (RTTY) the UBA Spring Contest (CW) and the NSARA Contest are the weekend of March 13-14. JUST AHEAD: The RSGB 80 Meter Club Championship (SSB) is March 18. The Virginia QSO Party, the 10-10 International Mobile Contest, the BARTG Spring RTTY Contest, the SARL VHF/UHF Contest, the Russian DX Contest, the AGCW VHF/UHF Contest, the CLARA and Family HF Contest, the UBA Spring Contest (6 M), the 9K 15-Meter Contest, the Spring QRP Homebrewer Sprint are the weekend of March 20-21. The CQ World Wide WPX Contest (SSB) is March 27-28. See the ARRL Contest Branch page <http://www.arrl.org/contests/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Emergency Communications course registration: Registration opens Monday, March 15, 12:01 AM Eastern Time (0501 UTC), for the Level III Emergency Communications on-line course (EC-003). Registration remains open through the March 20-21 weekend or until all available seats have been filled--whichever comes first. Class begins Tuesday, March 30. Thanks to our grant sponsors--the Corporation for National and Community Service and the United Technologies Corporation--the $45 registration fee paid upon enrollment will be reimbursed after successful completion of the course. During this registration period, approximately 50 seats are being offered to ARRL members on a first-come, first-served basis. To learn more, visit the ARRL Certification and Continuing Education (C-CE) <http://www.arrl.org/cce/> Web page. For more information, contact Emergency Communications Course Manager Dan Miller, K3UFG, dmiller@..., 860-594-0340.

* Scott Redd, K0DQ, heads to new job in Iraq: Retired Vice Admiral Scott Redd, K0DQ, has been appointed deputy administrator and chief operating officer of the Coalition Provisional Authority (CPA) in Baghdad, Iraq.

Redd, an ARRL member who lives in Marietta, Georgia, is one of two deputy administrators reporting to CPA Administrator L. Paul Bremer. Redd will direct the CPA's programs for the reconstruction of Iraq's infrastructure. That task includes awarding $18.4 billion in contracts through the project management office for major improvements to Iraq's electricity, oil, transportation, water resources, education, housing and construction, and communications networks, a CPA news release said. He also will be responsible for policy affecting Iraq's security programs. Those include the new Iraqi Army, the Iraqi Civil Defense Corps, Iraqi Border Patrol and Facilities Protection Services. Redd retired from the US Navy in 1998 as director of strategic plans and policy for the Joint Chiefs of Staff. During 36 years of active duty, he commanded eight organizations, founded the Navy's Fifth Fleet--the first new US Navy fleet in more than 50 years--and served in several senior Pentagon positions. Redd also led all U.S. Naval forces in the US Central Command from 1994 until 1996. The 1966 graduate of the US Naval Academy and Fulbright scholar was the keynote speaker for ARRL's second donors' reception held in conjunction with Hamvention 2003.

* Congressman-ham gets father's call sign: Rep Greg Walden (R-OR), one of the two hams in Congress, has a new call sign. With the assistance of ARRL, Walden was able to obtain his father's former call sign, W7EQI, via the vanity call sign program. A General class licensee and an ARRL member, Walden formerly held WB7OCE. The congressman's father, Paul E. Walden, died in March 2003. He had been licensed since 1934. Walden, a broadcaster, is a member of the House Subcommittee on Telecommunications and the Internet.

* Barton replaces Tauzin: Texas Republican Rep Joe Barton was named the new chairman of the House Energy and Commerce Committee <http://energycommerce.house.gov/> on February 25. He replaces Louisiana Republican Billy Tauzin, who announced last month that he was stepping down as chairman and would not run for re-election in November. Energy and Commerce is the parent committee of the House Subcommittee on Telecommunications and the Internet, which is considering two Amateur Radio-related bills: HR 713, the Spectrum Protection Act of 2003, and HR 1478, the Amateur Radio Emergency Communications Consistency Act of 2003. Barton also serves on the House Subcommittee on Telecommunications and the Internet, but he has not yet signed on as a cosponsor of either HR 713 or HR 1478.

* HQ staffers get IC-7800 preview: Members of the ARRL Headquarters staff got a hands-on preview of the not-quite-yet-released ICOM IC-7800 transceiver, thanks to Icom Engineering Manager John Gibbs, KC7YXD. Gibbs visited Headquarters March 4 with a pre-production model of his company's new top-end Amateur Radio HF plus 6-meter transceiver. Among its multitude of features, the IC-7800 offers a seven-inch color TFT display, two independent receivers, a spectrum display, CW autotune, and RTTY and PSK31 capability just by plugging in a keyboard. The IC-7800 will replace the venerable IC-781 as the capstone of Icom's Amateur Radio product line. In terms of performance, Gibbs claims the IC-7800 will offer third-order intercept (IP3) performance in the +40 dBm range and two-tone, third-order

intermodulation distortion dynamic range well in excess of 100 dB. Although a retail price has not yet been firmed up, it's anticipated that owning an IC-7800 will set buyers back less than $11,000. Musician Joe Walsh, WB6ACU, and audio expert and manufacturer Bob Heil, K9EID, were among the operators as the IC-7800 saw action at W1AW during the ARRL International DX Contest (Phone) March 6-7. The IC-7800 will be the focus of Icom's Hamvention exhibit May 14-16, and it could be on the market in a month or so.

* Eastern VHF/UHF Conference set for April: The 30th annual Eastern VHF/UHF Conference, sponsored by the North East Weak Signal Group <http://www.newsvhf.com/>, will be held April 16-18 at the Radisson Hotel in Enfield, Connecticut. The conference has been moved from August to April to help eliminate conflicts with other ham radio activities and vacation schedules. Guest speakers, articles for the conference Proceedings, volunteers and prize donations are being solicited. Confirmed speakers include ARRL Contest Branch Manger Dan Henderson, N1ND, on the status of ARRL VHF/UHF contesting and awards; Jeff Klein, K1TEO, "16 Years of Contesting From Connecticut;" Gerald Youngblood, AC5OG, "Software Defined Radios SDR-1000 Beta" and Fred Stefanik, N1DPM, "Yagis: Bigger isn't Always Better." More information is on the Eastern VHF/UHF Conference Web page <http://www.newsvhf.com/vhfconf.html>.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League--The National Association For Amateur Radio--225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Jim Haynie, W5JBP, President.

The ARRL Letter offers a weekly e-mail digest of essential news of interest to active amateurs. The ARRL Letter strives to be timely, accurate, concise, and readable. Visit ARRLWeb <http://www.arrl.org> for the latest news, updated as it happens. The ARRL Web site <http://www.arrl.org/> offers access to news, informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled from The ARRL Letter.

==>How to Get The ARRL Letter
The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:

ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE:
HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@...
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

542. EchoLink backup

Yahoo group: Temple_ARC
Date: 2004-03-16 12:02:17 UTC
From: lampasasrepeater@a1cmugs.com
Topic: 542 Message: 542

Hi All and thanks for all the help in moving me back to Lampasas Tx.

I now have Echolink up and running at my new location.

Tonite's Central Texas Storm Spotters Training Net should be running on time.

Please see below for more info on times and locations.

Again thanks for all your Help..

This Sat I could sure use some additional help in setting up some Antennas if at all possiable.

You can contact at the numbers below if you can help.

We have successfully launched a tremendous tool for homeland security by executing the W5TSG Emergency Relay nets on the 2 meter band. The success is not just in numbers but in the geography we have covered. Emergency Management folks have given a thumbs up on the results we are all getting. A big thanks to all of the hams that have taken this mission seriously.
W5TSG EMERGENCY RELAY NET SCHEDULE
1-Repeater relay nets
Wednesdays 7:30p.m.
COUNTY REPEATER FREQUENCIES
Bell: 147.180 123 tone
Bosque: 147.180 123 tone
Coryell: 147.180 123 tone
Hamilton: 147.180 123 tone
Hill and surrounding area:146.780 123 tone
Johnson County: 145.490 88.5 tone
Limestone and surrounding area: 145.390
Williamson and surrounding areas: 146.90
8:00 P.M. McLennan: 147.320 123 tone

2-Simplex relay net
LAST WEDNESDAY of each month:
Feb 25 Mar 31 Apr 28 May 26 Jun 30 Jul 28 Aug 25 Sep 29 Oct 27 Nov 24 Dec 29
All simplex nets start at 7:30pm
COUNTY SIMPLEX FREQUENCIES
Bell: 145.555
Bosque: 147.450
Coryell: 147.450
Hamilton: 147.450
Hill: 146.540
Johnson: 146.460
Limestone: 146.550
McLennan: 147.550
Williamson and surrounding areas: 146.460
The Texas State Guard Hams have launched an HF counterpart of this plan and invite ALL hams to check in on this net every Wednesday at 7:00PM on 80m 3.972. It is just a "muster" net at this time but will be more involved in the training and information as it progresses. The ultimate plan of course is a statewide "muster" on the first Saturday of every month on the 40m band around 9:00AM with the frequency TBA soon. This net will involve not just the TXSG units but all others interested. Information on this activity will be sent to all of you, as it becomes reality. Ham radio is basically a worldwide handshake and all of us are part of it...

Subject: The 147.140, Pl 123 is in testing...

Blind Copied to many on my old emergency communications list.

This afternoon Gerald Richmond, N5ZXJ, made some modifications to the new 147.140 (PL 123) repeater on the KCEN tower at the 1600-foot level. The preliminary reports are very good to outstanding with coverage from San Saba to the west, Franklin to the east, Hillsboro to the north and Buda to the south. Several other stations in the adjacent counties to KCEN checked in with full quieting. The repeater was heard in Fort Worth but the station could not hit it. We will be monitoring for stations to verify the full coverage.

The station was funded with a Texas Health Department grant to be a wide coverage amateur radio emergency backup in the event of a bio-chem event and loss of other communications facilities. KCEN management and owners made the space available on the KCEN tower. Bell County Officials graciously accepted the responsibility of managing the funds and equipment.

The Bell County EOC (and Its Volunteer Reserves group) is the official owner of the machine but its charter is to be available to all amateurs in the area, especially those involved with emergency operations and NOAA (SKYWARN) I strongly encourage all amateurs interested in emergency communications to verify their capability to hit the repeater.

I have been working with the National Weather Service in Fort Worth for the past year or so to establish EchoLink connections with them. We will be testing this out shortly to verify all is well. With the wide area capabilities of the repeater and EchoLink, we, Central Texas, should be able to have, for the first time, real time communications with the NWS.

We have also already had full quieting communications with a mobile rig near the DPS Emergency Operations Center in Austin and thus another significant EC leg is possible.

Any amateur radio organization that wishes to hold nets or other emergency related practice sessions on the machine please contact me for scheduling. In the event of a real emergency, the net control of the repeater will be determined by the amateur radio operators at the Bell County EOC and passed to the group in most need of its capabilities.

This appears to be a great tool for the amateur radio community, please use it.

546. Friday Presentation

Yahoo group: Temple_ARC
Date: 2004-03-18 16:48:03 UTC
From: Steve Bosshard
Topic: 546 Message: 546

Friday, March 19, 2004
8:30 AM - 9:30 AM
Temple College, Marshall Auditorium
The Honorable Jay Kimbrough, appointed by Governor Rick Perry as the State of Texas Director of Homeland Security, will address citizens, civic leaders and emergency personnel on the state of readiness of Texas. He will be followed by a presentation on terrorism by Lt. Gen. (RET) Ronald Blanck, MD, President of the University of North Texas Health Science Center. The Temple Fire & Rescue Honor Guard will be featured. The presentation is part of the 2004 Texas Disaster Training Institute held on Temple College campus from 3/13 - 3/20. Over 485 enrollees from across the country are in Temple for the event. Free and Open to the Public. Sponsored by the Mid-Tex American Red Cross, Central Texas Council of Governments and Bell County Public Health. Funded in part by Laerdal, Inc and State Farm, Inc. For more information go to www.knightstar.us <http://www.knightstar.us/> or www.midtexredcross.org

Below is a list of TARC Reflector Members Call Signs.
I am sure that I probably missed some folks. Please let
me know if I did. I figured a list might help promote
exchange of ideas and communications and make
this list informative and benefit the ham community.

Also several members do not have calls, yet.

Invite folks who can contribute to the cause.

==>ARRL URGES "THOUGHTFUL, CONSIDERED COMMENTS" ON PROPOSED BPL RULES

Comments on the FCC Broadband over Power Line (BPL) Notice of Proposed Rule
Making (NPRM) in ET Dockets 03-104 and 04-37 are due by Monday, May 3. The
deadline for reply comments--comments on comments filed by others--is
Tuesday, June 1. The ARRL will comment by the deadline on the FCC's
proposals to amend its Part 15 rules to adopt new requirements and
measurement guidelines for so-called "Access BPL" systems that provide
broadband access via electric utility power lines. ARRL CEO David Sumner,
K1ZZ, says the League recommends that members read the NPRM and develop
their own thoughtful, considered comments that specifically address the
FCC's BPL proposals, reflect positively on the amateur community and, if
possible, offer alternative recommendations. He asked amateurs to keep four
things in mind, however.
```

"First, this is not a proceeding to 'permit' or 'authorize' BPL," he said. "BPL is already permitted under the existing Part 15 rules."

Second, Sumner pointed out, the NPRM reaffirms that licensed services must be protected from harmful interference and are not required to protect BPL systems. "This is good, but we can't take it for granted that the principle will be honored in practice," he said.

"Third," Sumner went on, "the NPRM proposes additional, new constraints on BPL to protect licensed services. The FCC did not go far enough, but at least the proposals aim in the right direction."

Finally, while the League continues to believe firmly that BPL is "a very bad idea," arguing that the FCC should ban BPL "will not get us anywhere," he concluded. Instead, Sumner says, amateurs must document beyond any doubt the levels of protection that must be given to over-the-air services, then leave it for others to decide whether BPL is feasible within those limits. "We need to prove that the risk of interference is significantly greater than the BPL proponents say it is," Sumner said.

He also asserted that the FCC's proposed "interference mitigation" requirements fall far short of providing real protection from harmful interference, and that the Commission is ignoring the practical problems that will arise when Amateur Radio transmissions disrupt BPL systems.

Carrier current systems like BPL are subject to the FCC's Part 15 rules governing unlicensed devices, and the FCC has acknowledged that "amateur operations are likely to present a difficult challenge" to BPL deployment, especially in the case of hams--an estimated 150,000 of them--who use high-gain antennas sited near power lines. The proposed rules remain silent on the issue of mitigating BPL interference to the estimated 70,000 Amateur Radio HF mobile stations.

Interference mitigation for mobile stations "is clearly impractical," Sumner asserted. "Since BPL systems operating at the present Part 15 limit cause harmful interference to mobiles, the only solution is an absolute limit on radiated emissions that is lower than the present limit." He said the ARRL was in the process of determining scientifically what the limit must be.

Sumner further noted that the NPRM does not mandate a publicly accessible BPL database to facilitate interference mitigation for fixed stations. In addition, the League wants the FCC to establish performance standards for BPL interference mitigation. "There must be severe enforcement penalties for failure to resolve a complaint in real time and for failure to maintain the database," he said.

The League encourages anyone, particularly radio amateurs, who has actually experienced BPL interference to file detailed comments documenting the interference. "BPL proponents claim they are not getting interference complaints," Sumner noted. "If we let them claim their systems are 'clean' when we know they aren't, shame on us."

Interested individuals and organizations may file comments via the Internet, using the FCC's Electronic Comment Filing System (ECFS) <http://www.fcc.gov/cgb/ecfs/>. In an unusual move, the FCC has added another docket number to the BPL proceeding. That could complicate filing comments and may lead to some confusion. Although the original FCC BPL Notice of Inquiry last April bore ET Docket 03-104, the recent BPL NPRM carries an additional docket number--ET Docket 04-37. The ARRL advises those posting comments to use the main ECFS page and file their comments on both proceedings--ET Docket 03-104 and ET Docket 04-37.

When submitting a comment or viewing filed comments, ECFS users should type "03-104" or "04-37" (without quotation marks but including the hyphen) in the "Proceeding" field of the ECFS on-line form. Do not use the NPRM's FCC document number when filing or searching for comments. The ECFS permits attaching a file containing detailed comments prepared off-line.

ARRL President Jim Haynie, W5JBP, will discuss the various implications of BPL with overnight radio talk show host Art Bell, W6OBB, on the Saturday, March 20, edition of the syndicated interview and call-in program Coast to Coast AM <http://www.coasttocoastam.com/>. Their interview is scheduled to air during the show's first hour (Sunday, March 21, 0600 UTC). The toll-free call-in number for Western US listeners is 800-618-8255. For Eastern US listeners it's 800-825-5033. First-time callers may use 775-727-1222. The "Wild Card Line"--for any caller--is 775-727-1295. The popular program, distributed by Premiere Radio Networks, airs live nightly from 10 PM until 2 AM Pacific Time on 430 stations and is available in every state. It's also available via the Web <http://www.coasttocoastam.com/streamlink/about.html>.

==>ARRL LAUNCHES ON-LINE TECHNICIAN CLASS

Thanks to the League's new on-line Technician Class Course for Ham Radio Licensing (EC-010) <http://www.arrl.org/cce/Tech.html>, prospective hams can study for their ticket wherever they can connect to the Internet and on their own schedule. The course is offered through the ARRL Certification and Continuing Education (C-CE) program. Two new classes will open each month, and students may sign up anytime via the ARRL Web site <http://www.arrl.org/cce/courses.html#ec010> or by calling the New Ham Hotline, 800-326-3942. Class sessions begin April 6 and April 20. ARRL On-line Course Development Coordinator Howard Robins, W1HSR, says the new on-line Technician course will include everything needed to successfully pass the examination plus help with getting a foothold in ham radio.

"The on-line approach to learning provides students a way to prepare for the exam at their own pace over an eight-week period with 24/7 access to the material," Robins said. The assignment of a very experienced "Elmer" or mentor to all students is one benefit of the on-line learning method. Another is a post-graduation on-line support group that's only available to course graduates. "This group will provide Elmering as the new ham gets started, as well as help with equipment and antenna questions or anything pertaining to Amateur Radio," Robins explained.

Steve Ford, WB8IMY, Chuck Hutchinson, K8CH, and Larry Wolfgang, WR1B, developed the class material. The Technician course takes 20 to 25 hours to complete, and those finishing the class will take their tests at a volunteer examiner test session <http://www.arrl.org/arrlvec/examsearch.phtml>.

Believed to be the first on-line Technician licensing class of its kind in the US, the course will closely follow the popular ARRL license manual Now You're Talking! The course fee--$99 for ARRL members and $139 non-members--includes a copy of the book. (Regular ARRL membership <http://www.arrl.org/join.html> is $39 per year, which includes QST, the official journal of ARRL--the national association for Amateur Radio.)

Students taking the class will be introduced to everything from casual operating to emergency and public service communication and to radio technology. Students also will learn about the role of radio clubs and of the ARRL Field Organization. A course syllabus <http://www.arrl.org/cce/syllabus.html#ec010> and a list of student activities <http://www.arrl.org/cce/student-activities.html#ec010> are on the C-CE Web site.

The Technician Class Course for Ham Radio Licensing and the virtual ham radio campus are available through ARRL's partnership with the Connecticut Distance Learning Consortium, a nonprofit organization that specializes in developing on-line courses for Connecticut colleges and universities. For additional details, e-mail cce@....

==>ISS COMMANDER TALKS VIA HAM RADIO WITH SCOTTISH SCHOOL

It might have been St Patrick's Day, but the accents of the youngsters questioning International Space Station Commander Mike Foale, KB5UAC, on March 17 definitely were Scottish. Nonetheless, the "luck of the Irish" was with the Amateur Radio on the International Space Station (ARISS) contact between the British-born Foale at NA1SS and Nancy Rocheleau, WH6PN, at Sacred Heart Academy in Honolulu. An MCI teleconference link provided the two-way audio for pupils at the Sgoil a' Bhac <http://www.sgoilabhac.org.uk/>--the School of Back--on the Isle of Lewis in the Outer Hebrides off Scotland's northwestern coast. Responding to one question, Foale explained that the ISS crew is not truly "weightless" in space.

"What's actually happening is that we're all falling together," Foale explained, pointing out that the space station is continuously falling as it circles Earth. Because the spacecraft is moving rapidly horizontally, it misses Earth because of its curve. "So, we're falling around the earth--all of the things inside the space station are falling," he continued. "We actually think that we're weightless, but, in fact, the weight is still there, and gravity is still working on us."

Apparent weightlessness in space has its pros and cons, Foale told the youngsters in response to another question. "In general, weightlessness causes problems because nothing stays put," Foale said. "You have to always have something sticky to hold things down." But, he went on to say,

weightlessness does let the crew store things just about anywhere on the ISS.

Foale said he was able to see some features of northern Scotland--including the Isle of Skye--when the ISS passed over that part of the world. "Yours is pretty easy to pick out too," he added. As he's said during past school group QSOs, one of his favorite leisure-time activities is to look at Earth.

Other planets also were on the minds of the primary and secondary schoolers who attend the School of Back. The astronaut also told the Scottish students that he believes scientists may one day discover evidence of fossilized life on Mars. He also estimated that it would be "maybe 15 years" before humans are able to land on Mars.

Sgoil a' Bhac has an enrollment of 190--the majority at the primary school level. Dating back to 1878, the school is committed to Gaelic language and culture. Foale visited the school last summer.

The School of Back QSO--the first for a school in Scotland--marked the 130th ARISS school group contact since the arrival of the first ISS crew in late 2000. ARISS <http://www.rac.ca/ariss/> is an international educational outreach with participation by ARRL, AMSAT and NASA.

==>PAST ARRL PRESIDENT IS AMONG HAMVENTION 2004 AWARD WINNERS

Hamvention <http://www.hamvention.org> has named ARRL President Emeritus George S. Wilson III, W4OYI, of Owensboro, Kentucky, the recipient of its 2004 Special Achievement Award. The Hamvention Awards Committee selected Wilson based on his decades of service to Amateur Radio through the ARRL, his public service and emergency communications work and his determination to overcome the debilitating effects of a 1995 stroke that left him partially paralyzed.

A ham since age 16, Wilson--an attorney by profession--has remained active in Amateur Radio for more than 50 years. The ARRL's 11th president, Wilson suffered a stroke on February 11, 1995. During his rehabilitation in July of that year, he stepped down after serving just over three years in the League's top volunteer position. Wilson's legacy includes a near lifelong involvement in the League's emergency and public service communications programs. He remains active in public service and emergency communication, and he continues his League service as a Great Lakes Division Assistant Director.

Honored with Hamvention 2004's top award--Amateur of the Year--is Dave Kopacz, KY1V/VP5X, of Hopkinsville, Kentucky. An ARRL member, Kopacz created and funded a program that gives young hams an opportunity each year to win an expenses-paid DXpedition trip to North Caicos Island.

"The Awards Committee feels that it is this kind of support for young people that will assure the future of Amateur Radio," Hamvention's said in announcing the 2004 award winners.

Kopacz developed the "Young Ham Contest Program" last year, and 14-year-old Daniel Bradke, W2AU, was the first DXpedition trip winner. As the selected applicant, Bradke operated as part of the VP5X Contest Group <http://www.vp5x.com> for the CQ World Wide CW contest last November. "I hope to get other hams involved in the program and eventually sponsor kids for every major contest," he said.

Barry Sanderson, KB9VAK, of Indianapolis has been named as recipient of the Hamvention 2004 Technical Excellence Award. The Awards Committee selected Sanderson for developing a multi-channel, multiphase slow-scan television modulation scheme known as Redundant Digital File Transfer (RDFT), formerly known as HDSSTV.

"Not only did Sanderson 'do the math,' but he also wrote the core software routines that allow RDFT to run on personal computers using sound card DSP capabilities," Hamvention said in its announcement. "This allows error-free transmission of computer files via standard Amateur Radio equipment." Sanderson has been a Hamvention forum presenter for the past three years.

Hamvention 2004 is Friday through Sunday, May 14-16, at Hara Arena near Dayton, Ohio. Awards will be presented at a recognition program Saturday, May 15.

==>IOWA HAM CLUB DESIGNATED A "DAILY POINT OF LIGHT"

The Points of Light Foundation & Volunteer Center National Network <http://www.pointsoflight.org> has designated The Tri-State Amateur Radio Club (TSARC) <http://www.qsl.net/w0cvj/> of Cresco, Iowa, as the Daily Point of Light for Monday, March 29. The Foundation recognized the ARRL-affiliated club for voluntarily providing communication during emergencies and for supporting Red Cross and The Salvation Army relief efforts. President George W. Bush and former President George H. W. Bush, have endorsed the Daily Points of Light Award, and each will send a congratulatory letter to the club.

"Through your service you join the ranks of America's true unsung heroes--volunteers," said Points of Light Foundation President and CEO Bob Goodwin. "The spirit and energy of America's volunteers inspire us all," he said. "Your work is a shining example of this spirit."

TSARC's designation as a Daily Point of Light did not escape the notice of ABC Radio Networks' commentator Paul Harvey <http://www.paulharvey.com>, who mentioned it during his noontime broadcast on March 12. Harvey said the nation still relies on Amateur Radio operators to get the message through in an emergency or disaster.

"For all of our sophisticated technology, in any real disaster, our country still relies heavily on its hams--Amateur Radio hobbyists," Harvey said in the approximately one-minute spot. Among citizen volunteers in the US, he concluded, there are "none more unsung and certainly none more unpaid, than the hams--standing by around the clock."

TSARC's Ernie Martin, WA0AUU, said it marked the first Point of Light Award to an Amateur Radio club. TSARC serves as a Community Emergency Response Team (CERT) <http://www.citizencorps.gov/programs/cert.shtm>--a Citizen Corps program. A small club with just over a dozen members, TSARC still has managed to equip itself with two mobile emergency communication units and even a couple of parasail units--used in search-and-rescue work.

While the club is in Iowa, its "tri-state" label derives from the fact that it serves parts of Minnesota and Wisconsin as well. The TSARC communications van--which the club resurrected from an aged auto junkyard candidate--contains equipment for both Amateur Radio and public safety frequencies. The unit can even beam a UHF Amateur TV signal from a disaster scene to a remote post--giving incident command personnel a firsthand look at what's happening.

In 2002, TSARC was the beneficiary of a $1500 ARRL Foundation <http://www.arrl.org/arrlf> grant to assist its emergency communication efforts. The money helped to supplement the club's own fund-raising efforts toward covering the approximately $6500 cost of a 16-foot equipment trailer. Martin says TSARC's communications trailer is packed with everything the participating amateurs will need when they get to a disaster site. "We take everything five people will need for five days," he said.

The Daily Point of Light Award is given by The Points of Light Foundation & Volunteer Center National Network in partnership with the Knights of Columbus and the Corporation for National and Community Service (CNCS) <http://www.cns.gov/>, which currently subsidizes ARRL Amateur Radio Emergency Communications course <http://www.arrl.org/cce> training. The Award honors individuals and organizations "who have made a commitment to connect Americans through service to help meet critical needs in their communities and in the nation."

==>RESEARCHERS RESCUED FROM ICY OUTPOST, SITE OF R0PA

A dozen Russian scientists were rescued March 6 from an Arctic research station near the North Pole that was nearly destroyed by what's being described as "a freak wall of ice." The North Pole Drifting Station SP-32 had been the site of the R0PA Amateur Radio operation.

Russian news media said helicopter teams facing frigid sub-zero conditions managed to reach the stranded researchers and saved all 12 explorers and two dogs. Hams around the world have reported working R0PA, for which DL5EBE is listed as QSL manager. The station's researchers reportedly were unharmed after being forced to huddle for three days in the remains of the outpost, some 450 miles from the nearest solid ground.

According to Russian TV reports, a wall of ice pushed up from the surrounding ice floe March 3. Little now remains of the scientific and educational facility, set up last April by the non-profit Center Pole organization with support from the Russian government and the Russian Academy of Sciences. It had been expected to remain in operation for several years.

Information on SP-32 is available on the Polus Arctic and Antarctic Expedition Centre Web site <http://www.polus.org/cgi-bin/sborka.cgi?name=sp2003>.

==>LESLIE A. MOXON, G6XN, SK

Leslie A. "Les" Moxon, G6XN, of Surrey, England, died March 3. He was 95 and among the oldest Amateur Radio operators in the UK. Licensed in 1928, Moxon was well-known among the amateur community for his writings on antennas, in particular his 1982 book HF Antennas for All Locations, now in its second edition. ARRL antenna specialist Dean Straw, N6BV, called Moxon a "radio pioneer" and said he'd been a fan of his work for years.

"His insights into the effects of terrain were one of the factors that got me interested years ago in this aspect of HF radio work," Straw said. During World War II Moxon was involved in top-secret work to develop radar. He worked for the government as a radio specialist after the war, retiring in 1969.

ARRL CEO David Sumner, K1ZZ, said Moxon's book "set the standard for practical antenna books and remains a classic."

Moxon's son, David, recalls that his father's gardens grew antennas the way others grew plants and shrubs, and a new antenna design was always taking shape. "He always liked to live on the top of a hill--good for propagation of radio waves," he said. "And when moving to their final house in Hindhead, real estate agents were bemused to be asked about 'the long path to Australia.'"

Moxon authored a July 1952 QST article, "Two-Element Driven Arrays." Several other of his articles appeared during the 1970s and 1980s in Ham Radio magazine. "A 6 Meter Moxon Antenna" by Allen Baker, KG4JJH, is among the antenna articles featured in April 2004 QST.

In later years, Moxon developed an interest in theology, and he was not active on the air in the months prior to his death. A service was held March 10. Survivors include his wife Nancy and his son.

==>SOLAR UPDATE

Ra the Sun god Tad "Sunny Boy" Cook, K7RA, Seattle, Washington, reports: Average daily sunspot numbers rose nearly 13 points March 11-17 to 66.1. Average daily solar flux rose by a negligible amount from 106.3 to 106.8. A solar wind stream caused geomagnetic disturbance from the last reporting week into the early part of this week, but conditions quieted. Mildly unsettled conditions may return over the weekend, with Friday through Monday, March 19-22, planetary A index predicted at 8, 12, 15 and 10. Solar flux is expected to moderately peak this weekend around 120 on both March 19 and 20, then 115 and 110 on March 21 and 22.

Remember that huge solar flare that occurred last November 4? Estimated at the time as an X28 flare, it now appears to have been more than twice as large as the previous record and has been adjusted upward to X45. See the report "Sun's massive explosion updated" on the BBC News Word Edition Web

site <http://tinyurl.com/22tpk>.

Sunspot numbers for March 11 through 17 were 67, 71, 61, 61, 49, 53 and 101, with a mean of 66.1. The 10.7 cm flux was 113.2, 107.5, 103.8, 102.5, 101.4, 109.6 and 109.8, with a mean of 106.8. Estimated planetary A indices were 26, 23, 15, 16, 13, 8 and 6, with a mean of 15.3.

==>IN BRIEF:

* This weekend on the radio: The RSGB 80 Meter Club Championship (SSB) is March 18. The Virginia QSO Party, the 10-10 International Mobile Contest, the BARTG Spring RTTY Contest, the SARL VHF/UHF Contest, the Russian DX Contest, the AGCW VHF/UHF Contest, the CLARA and Family HF Contest, the UBA Spring Contest (6 M), the 9K 15-Meter Contest, the Spring QRP Homebrewer Sprint are the weekend of March 20-21. JUST AHEAD: The CQ World Wide WPX Contest (SSB), the Spring Break RTTY Sprint. and the UBA Spring Contest (2 meters) are the weekend of March 27-28. See the ARRL Contest Branch page <http://www.arrl.org/contests/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Certification and Continuing Education course registration: Registration for the ARRL VHF/UHF--Beyond the Repeater (EC-008) and HF Digital Communication (EC-005) courses remains open through Sunday, March 21. Classes begin Tuesday March 30. Registration for the ARRL Radio Frequency Interference (EC-006), Antenna Design and Construction (EC-009) and the Technician Class for Ham Radio Licensing (EC-010) courses is open through Sunday, March 28. Classes begin Tuesday April 6. Students taking Radio Frequency Interference (EC-006) will learn how to identify and take steps to cure various kinds of interference. Antenna Design and Construction (EC-009) covers basic antenna theory and practical construction techniques. With the assistance of a mentor students in the Technician Licensing course will learn everything they need to learn to pass the FCC Technician license class test. To learn more, visit the ARRL Certification and Continuing Education Web page <http://www.arrl.org/cce/>. For more information, contact Certification and Continuing Education Program Department, cce@....

* Bogus ARRL.net messages still circulating: E-mail messages purporting to be from the ARRL E-Mail Forwarding Service <http://www.arrl.org/members-only/emailfwd.html>, "The ARRL.net team" or some variation continue to show up in members' inboxes. The messages, which often carry a subject line along the lines of "Warning about your e-mail account," indicate that the recipient's ARRL E-Mail Forwarding Service <call sign>@... address will be closed within three days because of an alleged violation of acceptable practices. These messages are false and did not come from The ARRL Forwarding Service. They are the result of one of the variants on a number of viruses now permeating the Internet. A file usually is attached to these messages. As always, do not open any attachments that you cannot identify. Opening the file could result in your computer being infected by a virus. This is only one of the several

virus-laden messages currently propagating across the Internet.
The ARRL advises its members to be cautious in opening any message and/or attachment, even if it appears to be from someone you know. All of these viruses use e-mail addresses from the address book of an infected computer to falsify the "From:" address in the header to make it appear that the message is from someone the recipient knows.

* FCC proposes to correct VEC filing errors: The FCC plans to correct inadvertent filing errors on the part of Volunteer Examiner Coordinators (VECs). In a Memorandum Opinion and Order (MO&O) released March 4, the FCC said it would reinstate the former call sign of Clifford S. Zipnick of Boynton Beach, Florida. A Technician class operator, Zipnick now holds KI4BSJ, a call sign issued in response to an application filed via the ARRL-VEC that erroneously asked the FCC to assign Zipnick the next available sequential call sign. Zipnick says he only wanted to modify his mailing address, not request a new call sign. The FCC has proposed to modify Zipnick's license to reflect his original call sign, KE4FGA. In another MO&O released March 4, the FCC has proposed modifying the license of Robert W. Rhodes, KG4RTN, of Hixson, Tennessee, from General to Technician class. Following a volunteer examination session in which Rhodes was an examinee, the Western Carolina Amateur Radio Society VEC (WCARS VEC) inadvertently filed an application indicating that Rhodes had qualified for General. It later realized that Rhodes had passed Element 3, the written exam, but not Element 1, the 5 WPM Morse code exam. WCARS VEC notified the FCC of the error. Unless Rhodes protests within 30 days, the FCC said it will issue a modification order to return his license to Technician class. The FCC blamed the situation on "an error made in reviewing the license examination data," and not on any wrongdoing by Rhodes.

* Amateur Radio represented at National Hurricane Conference: The 26th annual National Hurricane Conference <http://www.HurricaneMeeting.com> this year will again feature a training session involving Amateur Radio.
The National Hurricane Conference is the nation's forum for education and professional training in hurricane preparedness, and programs are scheduled April 5-9. The Amateur Radio session will be Tuesday, April 6, at the Wyndham Palace Resort and Spa in Lake Buena Vista, Florida. Amateur Radio operators may attend the Amateur Radio session at no charge and without registering for the full conference. ARRL section leadership from Northern Florida, Southern Florida and West Central Florida will be among the guest speakers to explore the role of Amateur Radio in hurricane communications. Representatives from WX4NHC, the Amateur Radio Station at the National Hurricane Center, and the Hurricane Watch Net will be on hand. ARRL Emergency Communications Course Manager Dan Miller, K3UFG, will represent the League at the session, and, for the first time, an ARRL Amateur Radio booth will be included with other displays. Thanks to ARRL's grant from the Corporation for National and Community Service, hams will be present to answer questions and provide information about the benefits of Amateur Radio, with a focus on emergency communications.

* AMSAT-NA Space Symposium and Annual Meeting set: The 22nd annual AMSAT-NA Space Symposium and Annual Meeting will take place October 8-10, 2004, at

the Crowne Plaza Hotel in Arlington, Virginia. Additional details will be available on the AMSAT-NA Web site <http://www.amsat.org>.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League--The National Association For Amateur Radio--225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Jim Haynie, W5JBP, President.

The ARRL Letter offers a weekly e-mail digest of essential news of interest to active amateurs. The ARRL Letter strives to be timely, accurate, concise, and readable. Visit ARRLWeb <http://www.arrl.org> for the latest news, updated as it happens. The ARRL Web site <http://www.arrl.org/> offers access to news, informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled from The ARRL Letter.

Below is a list of TARC Reflector Members Call Signs.
I am sure that I probably missed some folks. Please let
me know if I did. I figured a list might help promote
exchange of ideas and communications and make
this list informative and benefit the ham community.

Also several members do not have calls, yet.

Invite folks who can contribute to the cause.

554. Big Ugly Dish

Yahoo group: Temple_ARC
Date: 2004-03-20 17:50:39 UTC
From: KD5UBP@wmconnect.com
Topic: 554 Message: 554

I have a neighbor who has an old C-band satellite dish to get "rid of". I have looked at it (not measured) but looks like a 10 ft fiberglass. Has the controller box and all. If you want it let me know and I will make arrangements with him for you to take down and remove. It is located in far East Bell county near the Milam Co. line.

Mosfet Menagerie,
The trip to Brenham was enjoyable, especially spending Friday evening
with the
Lachenmachers. We ate some pretty good hamburgers in Sommerville and
spent the
night just outside Brenham at their place in the country. Our vicious
watch-Schnauzer
Hailey and their dogs seemed to get along fine, but I don't think she
made as good an
impression with the donkeys or the cat. We appreciate Dan and Linda's
hospitality and
had a good time at the swapfest. Lori bought a Yaesu VX1 to match the
one she has
and maybe to let me have the one with most scratches!

4th Tue-Odd Mo. Mar 23rd ARES Face-Face mtg 7PM at Marimont

Capitol 10K Mar 28th (THIS Sunday) To volunteer, please contact Mike
WA5VTV,
leave a message at 260-9782 or email michael.pendley@.... With
your
message, give T-shirt size and placement preference. The event is over
around
noon and a great (free) volunteer party is held at Zack's Tex-Mex.
If you wish, please feel free to contact me - 255-6753 n5mnw@...

If you're not an ARRL member and are considering it, AARC/ARO will
apply
$15 towards your AARC/ARO club dues if you sign up for first-time
ARRL membership through the club! Take advantage of dual signup, save
money,
join ARRL and AARC/ARO simultaneously!
Contact John KG5O@... or Roger W5WIA@... for more details.

Repeaters - what are they and how to use them

More hams use frequency-modulated (FM) voice than any other communications mode. Most hams have an FM rig of some type. They use it to keep in touch with their local friends. Hams often pass the time during their morning and evening commute talking on the air. In most communities, amateurs interested in a specialized topic (such as chasing DX) have an FM frequency where they meet regularly to exchange information. At flea markets and conventions, hand-held FM units are in abundance as hams compare notes on the latest bargain.
Generally, it's a good idea to use VHF or UHF for all local communications. The HF bands should be reserved for longer-distance contacts to reduce interference on the HF bands.

VHF and UHF FM voice operation takes two forms: simplex and repeater. Simplex operation means the stations are talking to each other directly, on the same frequency. This is similar to making a contact on the HF bands.

FM voice operation is well-suited to local VHF/UHF radio communication because the audio signal from an FM receiver is not affected by static-type electrical noise. Car engines and ignition systems produce quite a bit of static electrical noise, and many hams like to operate their FM radios while they are driving or riding in a car. (This is called mobile operation.) An AM or SSB receiver is affected much more by static-type electrical noise.

The communications range for VHF and UHF FM simplex is usually limited to your local area (5-15 miles). If you live high on a mountain and use a high-gain directional antenna, you may be able to extend your range considerably. Unfortunately, most of us do not have the luxury of ideal VHF/UHF operating conditions.
Often, we want to make contacts even though we live in a valley, are driving in a car or are using a low-power, hand-held transceiver.

Enter repeaters. A repeater receives a signal and re-transmits it, usually with higher power and from a better location, to provide a greater communications range. Often located atop a tall building or high mountain, VHF and UHF repeaters greatly extend the operating range of amateurs using mobile and hand-held transceivers. If a repeater serves an area, it's not necessary for everyone to live on a hilltop. You only have to be able to hear the repeater's transmitter and reach the repeater's receiver with your transmitted signal.

A repeater receives a signal on one frequency and simultaneously retransmits (repeats) it on another frequency. The frequency it receives on is called the input frequency, and the frequency it transmits on is called the output frequency.

To use a repeater, you must have a transceiver that can transmit on the repeater's input frequency and receive on the repeater's output frequency. The input and output frequencies are separated by a predetermined amount that is different for each band. This separation is called the offset. For example, the offset on 1.25 meters is 1.6 MHz. A repeater on 1.25 meters might have its input frequency on 222.32 MHz and its output on 223.92 MHz. Repeater frequencies are often specified in terms of the output frequency (the frequency you set your receiver to listen on) and the offset. Your transmitter operates on a frequency that is different from the receive frequency by the offset amount.

Most transceivers designed for FM repeater operation are set up for the correct offset. They usually have a switch to change between simplex operation (transmit and receive on the same frequency) and duplex operation (transmit and receive on different frequencies). So, if you wanted to use the repeater in the preceding example, you would switch your transceiver to the duplex mode and dial up 223.92 to listen to the repeater. When you transmit, your rig will automatically switch to 222.32 MHz (1.6 MHz lower in frequency), the repeater input frequency.

When you have the correct frequency dialed in, just key your microphone button to transmit through ("access") the repeater. Most repeaters are open -- that is, available for use by anyone in range. Some repeaters, however, have limited access. Their use is restricted to exclusive groups, such as members of a club. Such closed repeaters require the transmission of a continuous subaudible tone or a short "burst" of tones for access. These are called CTCSS (continuous tone-coded squelch system) or PL

(Private Line PL is a Motorola
trademark) tones. There are also some repeaters available for use by
everyone that require the use of special
codes or subaudible tones to gain access. The reason for requiring access
tones for "open" repeaters is to prevent
interference from extraneous transmissions that might accidentally key the
repeater. If you wish to join a group
that sponsors a closed repeater, contact the repeater control operator.

Finding a Repeater

Most communities in the United States are served by repeaters. While the
majority of repeaters (over 6000)
are on 2 meters, there are more than 1600 repeaters on 222 MHz, more than
5000 on 440 MHz, over 70 on 902
MHz and more than 200 on 1270 MHz. More repeaters are being put into
service all the time. Repeater
frequencies are selected through consultation with frequency coordinators
-- individuals or groups that
recommend repeater frequencies based on potential interference and other
factors.

There are several ways to find the local repeater(s). Ask local amateurs or
contact the nearest radio club. Each
year, the ARRL publishes The ARRL Repeater Directory, a comprehensive
listing of repeaters throughout the
United States, Canada, Central and South America and the Caribbean. Besides
finding out about local repeater
activity, the Directory is handy for finding repeaters to use during
vacations and business trips. Another handy
tool for travelers is TravelPlus for Repeaters(tm) CD-ROM.

Certain segments of each band are set aside for FM operation. For example,
on 1.25 meters, repeater inputs
are found between 222.32 and 223.28 MHz. The corresponding outputs are
between 223.92 and 224.98 MHz.

Frequencies between 223.42 and 223.9 MHz are set aside for simplex
operation. On 23 cm, repeater inputs run
between 1270 and 1276 MHz, with corresponding outputs between 1282 and 1288
MHz. Simplex operation is
between 1294 and 1295 MHz.

Repeater Operating

Before you make your first FM repeater contact, you should learn some
repeater operating techniques. It's
worth a few minutes to listen and familiarize yourself with the procedures
used by other hams in your area.
Accepted procedures can vary slightly from repeater to repeater.

Your First Transmission

Making your first transmission on a repeater is as simple as signing your call. If the repeater is quiet, just
say "N1GZO" or "N1GZO listening" -- to attract someone's attention. After you stop transmitting, you will
usually hear the unmodulated repeater carrier for a second or two. This squelch tail lets you know that the
repeater is working. Someone interested in talking to you will call you after your initial transmission. Some
repeaters have specific rules for making yourself heard. In general, however, your call sign is all you need.
Don't call CQ to initiate a conversation on a repeater. It takes longer to complete a CQ than to transmit your
call sign. (In some areas, a solitary "CQ" is permissible.) Efficient communication is the goal. You are not on
HF, trying to attract the attention of someone who is casually tuning across the band. In the FM mode, stations
are either monitoring their favorite frequency or not. Except for scanner operation, there is not much tuning
across the repeater bands.

To join a conversation in progress, transmit your call sign during a break between transmissions. The
station that transmits next will usually acknowledge you. Don't use the word "break" to join a conversation --
unless you want to use the repeater to help in an emergency. To make a distress call over a repeater, say "break
break" and then your call sign to alert all stations to stand by while you deal with the emergency.
A further word about emergencies: Regardless of the band, mode or your class of license, FCC Rules
specify that, in case of emergency, the normal rules can be suspended. If you hear an emergency call for help,
you should do whatever you can to establish contact with the station needing assistance, and immediately pass
the information on to the proper authorities. If you are talking with another station and you hear an emergency
call for help, stop your QSO immediately and take the emergency call.

To call another station when the repeater is not in use, just give both calls. For example, "N1II, this is
N1BKE'' If the repeater is in use, but the conversation sounds like it is about to end, wait before calling another
station. If the conversation sounds like it is going to continue for a while, however, transmit only your call sign
between their transmissions. After you are acknowledged, ask to make a quick call. Usually, the other stations
will stand by. Make your call short. If your friend responds, try to meet on another repeater or on a simplex
frequency. Otherwise, ask your friend to stand by until the present conversation ends.

Use plain language on a repeater. If you want to know someone's location, say "Where are you?" If you
want to know whether someone you're talking with is using a mobile rig or a hand-held radio, just ask: "What
kind of radio are you using?" You get the idea.

Courtesy Counts

If you are in the midst of a conversation and another station transmits his or her call sign between
transmissions, the next station in line to transmit should acknowledge the new station and permit the new arrival
to make a call or join the conversation. It is impolite not to acknowledge new stations, or to acknowledge them
but not let them speak. The calling station may need to use the repeater immediately. He or she may have an
emergency to handle, so let him or her make a transmission promptly.

A brief pause before you begin each transmission allows other stations to break in -- there could be an
emergency. Don't key your microphone as soon as someone else releases theirs. If your exchanges are too
quick, you can prevent other stations from getting in.

The courtesy tones found on some repeaters prompt users to leave a space between transmissions. The
beeper sounds a second or two after each transmission to permit new stations to transmit their call signs in the
intervening time. The conversation may continue only after the beeper sounds. If a station is too quick and
begins transmitting before the beeper sounds, the repeater may indicate the violation, sometimes by shutting
down!

Keep transmissions as short as possible, so more people can use the repeater. Again, long transmissions
could prevent someone with an emergency from getting the chance to call for help through the repeater. All
repeaters encourage short transmissions by "timing out" (shutting down for a few minutes) when someone gets
longwinded. The time-out timer also prevents the repeater from transmitting continuously, due to distant
signals or interference. Because it has such a wide coverage area, a continuously transmitting repeater could
cause unnecessary interference. Continuous operation can also damage the repeater.

You must transmit your call sign at the end of a contact and at least every 10 minutes during the course of
any communication. You do not have to transmit the call sign of the station to whom you are transmitting.
Never transmit without identifying. For example, keying your microphone to turn on the repeater without

saying your station call sign is illegal. If you do not want to engage in conversation, but simply want to check if
you are able to access a particular repeater, simply say "N1KB testing."

Fixed Stations and Prime Time

Repeaters were originally intended to enhance mobile communications. During commuter rush hours,
mobile stations still have preference over fixed stations on some repeaters. During mobile prime time, fixed
stations should generally yield to mobile stations. When you're operating as a fixed station, don't abandon the
repeater completely, though. Monitor the mobiles: your assistance may be needed in an emergency. Use good
judgment: Rush hours are not the time to test your radio extensively or to join a net that doesn't deal with the
weather, highway conditions or other subjects related to commuting. Third-party communications nets probably
should not be conducted on a repeater during prime commuting hours.

Simplex Operation

After you have made a contact on a repeater, move the conversation to a simplex frequency if possible. The
repeater is not a soapbox. You may like to listen to yourself, but others, who may need to use the repeater, will
not appreciate your tying up the repeater unnecessarily. The easiest way to determine if you are able to
communicate with the other station on simplex is to listen to the repeater input frequency. Since this is the
frequency the other station uses to transmit to the repeater, if you can hear his signals there, you should be able
to use simplex. If you want to perform an on-the-air test of a pair of hand-held radios, you should select an
unoccupied simplex frequency.

The function of a repeater is to provide communications between stations that can't otherwise communicate
because of terrain, equipment limitations or both. It follows that stations able to communicate without a repeater
should not use one. That way, the repeater is available for stations that need it. (Besides, communication on
simplex offers a degree of privacy impossible to achieve on a repeater. On simplex you can usually have
extensive conversations without interruption.)

Select a frequency designated for FM simplex operation. Otherwise, you may interfere with stations
operating in other modes without realizing it. (The reason for this is simple: Changing to a simplex frequency is
far easier than changing the frequencies a repeater uses.) To see if you and the other station can communicate

on a simplex frequency, listen on the repeater input frequency. If you can clearly hear what's going into the
repeater, you don't need the repeater to communicate.

Autopatch: Use it Wisely

An autopatch allows repeater users to make telephone calls through the repeater. To use most repeater autopatches, you generate the standard telephone company tones to access and dial through the system. The tones are usually generated with a telephone-type tone pad connected to the transceiver. Tone pads are available from equipment manufacturers as standard or optional equipment. They are often mounted on the front of a portable transceiver or on the back of a fixed or mobile transceiver's microphone. Whatever equipment you use, the same autopatch operating procedures apply.

There are strict guidelines for autopatch use. The first question you should ask is "Is the call necessary?" If it is an emergency, there is no problem -- just do it! Calling for an ambulance or a tow truck is okay. Other reasons may fall into a gray area. As a result, some repeater groups expressly forbid autopatch use, except for emergencies.

Don't use an autopatch where regular telephone service is available. One example of poor operating practice can be heard most evenings in any metropolitan area. Someone will call home to announce departure from the office. Why not make that call from work before leaving?

Never use the autopatch for anything that could be considered business communications. The FCC strictly forbids you to conduct communications in Amateur Radio for your business or for your employer. You may, however, use Amateur Radio to conduct your own personal communications. The rules no longer forbid you to use the autopatch to call your doctor or dentist to make an appointment, or to order food, for example.
Don't use an autopatch just to avoid a toll call. Autopatch operation is a privilege granted by the FCC.

Abuses of autopatch privileges may lead to their loss for everyone.

You have a legitimate reason to use the autopatch? Here's how most systems operate. First, you must access (turn on) the autopatch, usually by pressing a designated key on the tone pad. Ask the other hams on a repeater how to learn the access code. Many clubs provide this information only to club members. When you hear a dial tone, you know that you have successfully accessed the autopatch. Now, simply punch in the telephone number you wish to call.

Once a call is established, remember that you are still on the air. Unlike a normal telephone call, only one party at a time may speak. Both you and the other person should use the word "over" to indicate that you are

finished talking and expect a reply. Keep the call short. Many repeaters shut off the autopatch after a certain
time.

Turning off the autopatch is similar to accessing it. A key or combination of keys must be punched to return
the repeater to normal operation. Ask the repeater group sponsoring the autopatch for specific information about
access and turn-off codes, as well as timer specifics. Don't forget to identify your station. Most groups expect
you to give your call sign, the date and time just before accessing the autopatch and just after turning it off.

561. New Digtrx Version 1.43 Notes...

Yahoo group: Temple_ARC
Date: 2004-03-24 20:58:47 UTC
From: Charlie Schlieper
Topic: 561 Message: 561

A few notes to DIGTRX users: The latest version of DIGTRX 1.43 was released March 23, 2004. It is designed as a more "complete" installation package, and you CAN install this one on top of your existing C:\DIGTRX. Just select the BROWSE, and be careful NOT to get a double "C:\Digtrx\Digtrx" in the string. If you don't direct it into your existing Digtrx folder, it will install the 1.43 version to C:\Program Files\Digtrx. If you allow this to happen, you will have to copy all your existing data FILES over to the new location.

If you simply allow 1.43 to go into your "EXISTING" Digtrx folder, it is a simpler installation. USERS of Windows 98 and Windows 98se must modify ONE new FILE in Digtrx 1.43, unless you allow it to install into C:\Program Files\DIGTRX. A new file called "rxzbzf.bat" needs to be modified to "close on exit" to prevent the "WINOLDAP" problem. If you're a Windows98 user, remember when you right clicked on "rxzbz.bat" and "txzbz.bat," chose PROGRAM, and clicked on "CLOSE ON EXIT?" Do this again for this new file--- "rxzbzf.bat." (Windows XP platform does not have the WINOLDAP problem)

If you're a Windows98 user and allowed Digtrx 1.43 to install into C:\Program Files\DIGTRX, then you must perform the "CLOSE ON EXIT" mod to all three BAT files: RXZBZ.BAT, TXZBZ.BAT, and RXZBZF.BAT.

73, Charlie Schlieper, N5TD

Subject: Central Texas Airshow Volunteer Meeting 4/4/04

Dear Volunteer,

Just a reminder that we only have two volunteer meetings left before the best airshow in central Texas.

Our next meeting is Sunday April 4 at 1:00 pm at the Temple airport.

We will review the current draft of the site map and confirm the shifts that you signed up for.

This meeting will give you a good idea of where everything will be and review the preliminary schedule.

There are still a few volunteer slots open, so come to the meeting, bring a friend, and see if you want one more shift.

Our last volunteer meeting will be on Sunday April 25, the Sunday before the airshow, at 1:00 pm at the Temple airport. We will distribute the volunteer admission wristbands at this meeting so it is important to attend.

Best regards,

John Gantt

Central Texas Airshow

Operations Director

i dusted my old tapr tnc-1 (the original tnc) off about a year ago and looked around a bit. the only hf packet is a bulletin board backbone, and the only vhf packet is aprs and dx/contest spotting clusters. i think the other digital modes are just so much more popular these days, especially on hf. i put the tnc back in storage.

The Texas A&M club, W5AC, is working to obtain several 440-band data radios and establish a packet network again. We plan to design ammo-can, self-contained, self-powered, portable packet stations that are plug-and-playable to any laptop. Most of us in the club are new to packet and thought it would be a good backup traffic-passing system in case of emergency. Right now, we are only in the early stages, so depending on the interest, a lot of growth is possible.

Just my $0.02,
Doug, KD5USF

Good Morining Folks,

Thus far Floyd Bumpas, Ron Thompson, Ron Bowden, Joe Robertson, Jan and Ross Gregg, Al Lawrence, John Biles, and probably a couple of others that I accidentaly omitted are on board for testing.

There has been some discussion about whether test should start at 1 or 1:30 PM.

I have the Team's materials on hand thanks to Jim and Kay and Charlie.

More to follow as we get closer. Joe offered to partner with me in managing the test session.

73,

Steve

==>FEMA APPEARS TO BACKPEDAL IN BPL "CLARIFICATION" LETTER

After expressing "grave concerns" to the FCC last fall about the
interference potential of Broadband over Power Line (BPL) systems, the
Federal Emergency Management Agency (FEMA) now appears to be backing away
from that strong stance. Now a part of the Department of Homeland Security,
FEMA filed comments December 4 in response to the FCC's April 2003 Notice
of Inquiry in ET Docket 03-104. Many have cited those remarks in their own
```

comments opposing BPL deployment. In a January 8 letter that's now part of the BPL Notice of Proposed Rule Making (NPRM) in ET Docket 04-37, Michael D. Brown, the US Department of Homeland Security's under secretary for emergency preparedness and response, told FCC Chairman Michael K. Powell that FEMA wanted to "clarify the record" to ensure that its filing was not "misunderstood or misconstrued."

"We have become aware that certain distinct approaches to BPL may have the potential to cause interference to FEMA's high frequency radio communications system," Brown said in his January letter. "However, we continue to study the BPL proceeding and have not concluded that there is a material interference problem or that all of the distinct technological approaches to BPL pose a risk of interference."

The FEMA official said his agency expects that there may be ways to provide BPL's benefits "without compromising the emergency communications capabilities available to FEMA."

The January letter stands in stark contrast to FEMA's predictions last December that "the introduction of unwanted interference from the implementation of BPL technology into the high frequency radio spectrum will result in significant detriment to the operation of FEMA radio systems." Saying such interference could "directly impair the safety of life and property," the agency also had recommended the FCC beef up its Part 15 rules to ensure no increase in interference levels to existing FCC or NTIA-licensed communication systems.

"The purported benefits of BPL in terms of expanded services in certain communications sectors do not appear to outweigh the benefit to the overall public of HF radio capability as presently used by government, broadcasting and public safety users," FEMA asserted last December in comments filed on the agency's behalf by Chief Information Officer Barry C. West.

BPL also could render such "essential communications services" as the Radio Amateur Civil Emergency Service (RACES), the Military Affiliate Radio System (MARS) and the Civil Air Patrol (CAP) useless, FEMA said. FEMA and ARRL are signatories to a Memorandum of Understanding that focuses on how Amateur Radio personnel may coordinate with the agency to support emergency communications functions. FEMA's December comments also referenced ARRL's "Interference to PLC systems from Amateur Radio Operation."

Brown's January letter conveys a much milder, conciliatory tone. "We know that the FCC shares our appreciation for the importance of reliable communications in the context of disaster recovery and are confident that the Office of Engineering and Technology's technical assessment, as well as the Commission's regulations implementing BPL, will be sensitive to this issue," he concluded. "FEMA stands ready to assist in any way the Commission might find helpful."

The deadline to file comments in response to the FCC BPL NPRM is Monday, May 3. Reply comments are due Tuesday, June 1. Interested individuals and organizations may file comments via the Internet using the FCC's Electronic

Comment Filing System (ECFS) <http://www.fcc.gov/cgb/ecfs/>. The FCC asks that anyone filing comments do so "only in the newly established ET Docket No 04-37."

==>BPL SPECTER LENDS ADDITIONAL SIGNIFICANCE TO SPECTRUM PROTECTION ACT

ARRL President Jim Haynie, W5JBP, says the specter of interference to Amateur Radio bands from Broadband over Power Line (BPL) systems--if and when they are widely deployed--serves as a reminder of the importance of the Amateur Radio Spectrum Protection Act of 2003. While the legislation would not grant added protection from BPL beyond what present and proposed FCC regulations would provide, Haynie said the challenge of BPL underscores the value of Amateur Radio's spectrum allocations and the degree to which amateur access deserves protection. Identical House and Senate versions of the measure, an ARRL initiative, are on their third try in Congress. The cosponsor count on the House bill, HR 713, this week rose to 94--more than double the number six months ago. The Senate version, S 537, has eight cosponsors.

"With BPL on the horizon, it becomes even more important that we all get behind these bills and get them enacted," Haynie said this week. He reiterated his call for more League members to take the effort to write, call or e-mail their representatives and senators to explain the bills' importance and encourage them to consider cosponsoring the measures. "They cover all of our spectrum, not just a little," he added.

The Spectrum Protection Act bills would require the FCC to provide "equivalent replacement spectrum" to Amateur Radio if the Commission were to reallocate primary amateur frequencies, reduce any secondary amateur allocations, or make additional allocations within such bands that would substantially reduce their utility to amateurs.

The two bills do not directly address BPL interference. FCC rules already provide regulatory mechanisms in Part 15 and in proposed amendments to Part 15 that are specifically aimed at BPL "interference mitigation."

Among the latest House cosponsors to sign aboard HR 713 are Representatives John Conyers (D-MI), Shelley Berkley (D-NV), Susan Davis (R-CA), Charlie Norwood (R-GA), Norm Dicks (D-WA), Gene Taylor (D-MS), Tim Holden (D-PA), Danny Davis (D-IL), Gene Green (D-TX) and Jeff Miller (R-FL).

Haynie says letters from constituents are a crucial factor in getting the spectrum bills through Congress. "We can't get them into law without membership support," he said.

He urged members to contact their senators and representatives through their Washington or district offices. A sample letter on ARRL's The Amateur Radio Spectrum Protection Act of 2003 Web page <http://www.arrl.org/govrelations/arspa.html> cites Amateur Radio's role in public service activities, but Haynie invites members to personalize their own correspondence as they see fit.

The Amateur Radio Spectrum Protection Act of 2003 Web page also contains information on how to identify and contact individual members of Congress as well as links to the Thomas Web site <http://thomas.loc.gov/>. Among other things, the Thomas Web site includes links to the bills' text and a list of cosponsors. Those writing their lawmakers on behalf of the Spectrum Protection Act are asked to copy their correspondence to the League via e-mail <specbill03@...>.

Florida Republican Michael Bilirakis filed HR 713 in February 2003, and it has been referred to the Subcommittee on Telecommunications and the Internet. Introduced by Idaho Republican Michael Crapo, S 537 has been referred to the Committee on Commerce, Science and Transportation.

==>BPL HANDOUT AVAILABLE FROM ARRL

ARRL has posted a two-page document <http://www.arrl.org/tis/info/HTML/plc/BPL-leave-behind.pdf> that discusses Broadband over Power Line (BPL) in lay terms. "Broadband over Power Line: Why Amateur Radio is Concerned about its Deployment" is available for reprinting and use as a handout when, for example, dealing with members of Congress, municipal officials, power utilities and the news media.

While emphasizing that hams do not oppose broadband services per se and tend to be "early adopters" of new technology, the information sheet outlines Amateur Radio's concern about BPL's potential to create interference. Other broadband delivery methods "do not pollute the radio spectrum as BPL does," the paper states.

It also defines BPL, outlines its current deployment status, discusses FCC regulations already in place and explains that BPL's interference potential is real, not just theoretical. Finally, it lists "Others at risk," including short-wave listeners, public safety agencies and federal government radio systems.

==>NEW AMATEUR RADIO LF WORLD RECORD CLAIMED

Amateur stations in New Zealand and Asiatic Russia are laying claim to a new low-frequency world distance QSO record. Bob Vernall, ZL2CA, told ARRL this week that ZM2E, near Wellington, New Zealand, and UA0LE, near Vladivostok, Russia, completed a two-way contact during the night of March 20 on 137.70 kHz.

"The path length is estimated to be 10,311 km (6,392 miles), which is claimed as a new world record between amateur stations on LF bands," Vernall said. "For several hours signals received at ZM2E were so strong that they could be decoded 'by ear,' despite high peaks of QRN." By noting tone-on and tone-off times and checking them against a highly-accurate digital clock, the ZM2E operators at one point were able to decode the very slow-speed (QRSS) CW without resorting to Argo DSP software signal detection.

The Wellington Amateur Radio Club station at Quartz Hill uses the special ZM2E call sign for work in the 136-kHz band. A DXpedition station, UA0LE

obtained permission to support its LF antennas from a 90-meter (295.3 feet) broadcast mast.

Vernall said UA0LE set up for a slow-speed CW beacon transmission on 137.7895 kHz using 60-second dits--known as QRSS60. "They used the shortened form of 'UATLE' to save time in sending," he explained. Because they need to be succinct, Vernall said, LF DX signal reports use the same "O," "M" and "T" signal reports <http://www.arrl.org/tis/info/pdf/78518.pdf> developed for moonbounce and other weak-signal communication.

On the big day, ZM2E started calling UA0LE at 0930 UTC--sunset in Vladivostok. The first good UA0LE signals showed up on the computer screen at 1030 UTC, Vernall said.

The defining moment came when UA0LE confirmed reception of the "O" report from ZM2E. "At 1650 UTC, we received 'ZM RO E,' and by acknowledging our report to them it satisfied the minimum requirements for claiming a two-way contact," Vernall said. The two stations continued to "tie the ribbons" on the QSO for another hour or so.

Vernall and Andrew Corney, ZL2BBJ, were the operators at ZM2E. The operators in Vladivostok were Vlad Burakov, UA0LE; Vic Bondarev, UA9OC; Andy Rodichev, RA0LGH, and Ed Lesnichy, RU6LA.

==>NUMBER OF LOGBOOK OF THE WORLD USERS CLIMBS

Logbook of The World (LoTW), ARRL's electronic awards credit system, is closing in on 40 million separate Amateur Radio contacts in its secure database, said ARRL Special Assistant to the CEO David Patton, NN1N.

"Right now there are 39.6 million QSOs entered into Logbook, with 1.18 million matched contacts," he said. There are 7000 distinct registered users of the system, holding 9000 authenticated certificates, Patton added. Users may have more than one registered certificate, reflecting operation from home, changing call signs, operations during DXpeditions, or portable station operation each sporting a separate call sign.

Patton, who helped create the concept for LoTW, noted that the number of LoTW users continues to swell. Some 600 US hams have begun the registration process, along with an additional 600 amateurs in other countries, from whom ARRL is awaiting authentication documents. "The learning curve for getting on the system has remained pretty steady," he said. "It's pretty straightforward after you've been using it a while. The key is taking your time and following the instructions."

One reason numbers are continuing to grow is that more and more computer logging programs are incorporating various levels of support for LoTW. "Most of the major logging programs have it, with more developers working to integrate support," Patton said. "These software developers have worked really hard to make this happen."

Also hard at work is ARRL Web and Software Development Manager Jon Bloom, KE3Z, who is working on programming the much-anticipated "DXCC awards module" for the QSO matching system. No rollout date had been set for the DXCC module, Patton said, but it is currently being tested.

The DXCC module will offer the user the ability to incorporate his/her DXCC records straight from the DXCC desk into an LoTW account. LoTW will be able to find needed credits automatically by comparing what's in the database against the DXCC records on hand at ARRL.

"This application for DXCC is what we envisioned for LoTW years ago," Patton said. "It will be really worth the users' wait and the time and effort that Jon has put into the system."

==>W1AW/90 OPERATES THROUGH 2004

Hiram Maxim Memorial Station W1AW at ARRL Headquarters will identify using a "/90" designator through the end of 2004. The W1AW/90 call sign reflects the 90th anniversary of the League's founding by Maxim and Clarence Tuska in 1914. Operation as W1AW/90 begins April 3. W1AW Station Manager Joe Carcia, NJ1Q, said he'll encourage guest operators to use as many modes as possible, including RTTY, PSK31, satellite and even Hellschreiber.

"Plus, we're going to try for SSTV Worked All States (WAS)," he added. "It'll be tough, but we can do it." A special 90th anniversary QSL cards will be available for W1AW/90 contacts.

Self-addressed, stamped return envelopes should accompany all QSL requests. In addition, all contacts with W1AW/90 will also be uploaded to Logbook of The World <http://www.arrl.org/lotw>. For more information on W1AW, visit the W1AW Web page <http://www.arrl.org/w1aw.html>.

==>HAWAII AMATEUR ANTENNA BILLS UNDERGOING REVISION

ARRL Pacific Section Manager Kevin Bogan, AH6QO, reports revisions are under way on two bills in Hawaii, HB 2773 and HB 2774, that would allow Amateur Radio antennas in restricted condominium regimes and in subdivisions subject to homeowners' association covenants, conditions and restrictions (CC&Rs) in that state. Bogan says the amendments and revisions will enhance the bills' chances of passage.

"After listening to the thoughts and sentiments of the legislature, the Amateur Radio community and their neighbors," Bogan said, "the group of volunteer Amateur Radio operators that has been instrumental in propelling the bills first through the Hawaii State House of Representatives and now into the Hawaii State Senate has developed amended bills that may see passage."

Now in the Hawaii Senate, the measures await a hearing date before the Consumer Protection and Housing Committee. Bogan says many Hawaii hams have contacted the committee's chair to request that a hearing be scheduled. Bogan says that he hopes the revisions "will satisfy many of the salient concerns made by Amateur Radio operators and others." The proposed amendments would allow antennas in previously restricted areas sufficient

to perform necessary communication and allow amateurs to negotiate better antenna accommodations, Bogan said.

"While no compromise makes all parties content," he said, "it is hoped that the proposed amended bills will allow antennas sufficient for necessary communication and allow the associations to retain their aesthetic look."

==>SOLAR UPDATE

Sol man Tad "Staring at the Sun" Cook, K7RA, Seattle, Washington, reports: The third week of spring begins this weekend. HF conditions have been good with moderate geomagnetic conditions prevailing. Average daily sunspot numbers for the past week, March 25-31, were up more than 31 points to 123.9 compared to the previous week. Average daily solar flux rose 11 points.

On March 29, the sun showed several spots pointed earthward, including one large spot, 582. The sunspot number that day was 169, the highest since November 30, when it was 178. Geomagnetic conditions weren't bad on March 29, with the planetary A index at 12 and mid-latitude A index at 9.

Over the next five days solar flux values should stay between 110-115. Planetary A index for April 2-6 is predicted to be 8, 8, 20, 20 and 35. The predicted rise in geomagnetic activity is because of a possible solar wind for Sunday, April 4. Today, April 2, there is a slight chance of Earth's magnetic field being hit by a coronal mass ejection (CME).

==>IN BRIEF:

* This weekend on the radio: The Kids Roundup, the SP DX Contest, the EA RTTY Contest, the Montana and Missouri QSO parties, the QCWA QSO Party and the RSGB RoPoCo 1 are the weekend of April 3-4. The 144 MHz Spring Sprint and the RSGB 80-Meter Club Championship (CW) are April 5. The ARS Spartan Sprint is April 6. The DX YL to North American YL Contest (CW) is April 7-9, and the Lighthouse Spring Lites QSO Party (all modes) is April 10-18. JUST AHEAD: The ARCI Spring QSO Party, the EU Spring Sprint (SSB), the Georgia QSO Party, the Japan International DX Contest (CW), the CIS DX Contest (SSB), the UBA Spring Contest (SSB) and the SARL Hamnet 40-Meter Simulated Emergency Contest are the weekend of April 10-11. The Low Power Spring Sprint is April 12, the 222 MHz Spring Sprint is April 13, the RSGB 80-Meter Club Championship (SSB) is April 14 and the DX YL to North American YL Contest (SSB) is April 14-16. See the ARRL Contest Branch page <http://www.arrl.org/contests/> and the!
WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Emergency Communications course registration: Registration opens Monday, April 5, 12:01 AM Eastern Daylight Time (0401 UTC), for the on-line Level I Emergency Communications course (EC-001). Registration remains open through the April 10-11 weekend or until all available seats have been

filled--whichever comes first. Class begins Tuesday, April 20. Thanks to our grant sponsors--the Corporation for National and Community Service and the United Technologies Corporation--the $45 registration fee paid upon enrollment will be reimbursed after successful completion of the course. During this registration period, approximately 175 seats are being offered to ARRL members on a first-come, first-served basis. Senior amateurs are strongly encouraged to take advantage of this opportunity. To learn more, visit the ARRL Certification and Continuing Education Web page <http://www.arrl.org/cce/> and the C-CE Links found there. For more information, contact Emergency Communications Co!
urse Manager Dan Miller, K3UFG, <dmiller@...>; 860-594-0340.

* ARRL Certification and Continuing Education course registration: Registration for five technical courses is now open. Classes will begin on April 13 for the ARRL RFI (EC-006) and ARRL Antenna Design and Construction (EC-009) courses. Students participating in the RFI class will learn to identify sources of interference. Antenna Design and Construction students will become acquainted with antenna design and construction techniques. Registration for Technician Licensing (EC-010) will remains open through Sunday, April 11, and classes begin Tuesday, April 20. With the assistance of a mentor, students will learn everything they need to learn to pass the FCC Technician license class test. To learn more, visit the ARRL Certification and Continuing Education (C-CE) <http://www.arrl.org/cce/> Web page or contact the ARRL Certification and Continuing Education Program Department <cce@...>.

* Amateurs assisting Red Cross in Colorado fire: At week's end, Amateur Radio Emergency Service (ARES) members were supporting American Red Cross shelter operations in northern Colorado, where a wildfire had prompted voluntary evacuations of residents in a threatened subdivision. ARRL Colorado Section Emergency Coordinator Rob Roller, N7LV, says the latest word he has is that between six and eight amateurs per shift are supporting the shelters. It's anticipated they'll continue that coverage through the weekend and possibly longer. As of April 2, the 3500-acre-and-growing Fort Collins Picnic Rock Fire in the mountains some 15 miles northwest of Fort Collins was only 15 percent contained, according to the National Interagency Fire Center <http://www.nifc.gov/>. "The fire season is starting very early this year," said Roller. "March and April are normally our snowiest months, but instead we have conditions that haven't been this dry in over 90 years." The Picnic Rock Fire got !
its start March 30 when a residential yard fire went out of control, and winds gusting to 35 MPH have helped spread the flames through the timber-pocked brush and grassland area. More than 200 firefighters, air tankers and helicopters were battling the flames, but no homes or structures had been lost.

* Nominate a deserving PR volunteer for the McGan Award today! The deadline is May 21 to submit nominations for the 2004 Philip J. McGan Memorial Silver Antenna Award. This award recognizes significant contributions in the area of volunteer public relations on behalf of Amateur Radio. The League's Public Relations Committee will review the nominations, and the

ARRL Board of Directors will vote on the committee's recommendation during its July meeting. Those planning to nominate someone for the 2004 McGan Award are encouraged to read "Announcing the 13th Annual McGan Award" <http://www.arrl.org/pio/mcgan/2004/hagy.pdf> from February 2004 QST. The article highlights the significant differences between public relations and public service including rules for nomination. A nomination form <http://www.arrl.org/pio/mcgan/2004/McGan-Nom-Form04.pdf> is available on the ARRL Web site. Return completed entry forms and supporting materials to Philip J. McGan Memorial Silver Antenna Awar!
d, c/o Jennifer Hagy, N1TDY, ARRL, 225 Main St, Newington, CT 06111. Nominations must be received at ARRL Headquarters by 5 PM Eastern Daylight Time on May 21, 2004.

* Wyoming gets new Section Manager: Bill Edwards, WU7Y, of Gillette, Wyoming, has been appointed as ARRL Wyoming Section Manager, effective April 1, to complete the term of Jay Ostrem, W7CW, who has moved out of the section. The present term expires March 31, 2005. Field and Educational Services Manager Rosalie White, K1STO, made the appointment in consultation Rocky Mountain Division Director Walt Stinson, W0CP, and Vice Director Rev Morton, WS7W. Edwards is an ARRL Volunteer Examiner and recently has been working to reactivate the local Amateur Radio club. He was first licensed in 1957 but let his license lapse due to school and family priorities. Relicensed in 1988, Edwards soon upgraded to Amateur Extra. He puts a lot of importance on Amateur Radio emergency communication. "It's why we have our ham privileges," he says.

* First call for AMSAT-NA Symposium papers: AMSAT-NA has issued its first call for papers for presentation during the 2004 AMSAT Space Symposium and Annual Meeting this fall. The gathering will be held October 8-10 in Arlington, Virginia, in conjunction with the ARISS International meeting, October 10-13. Proposals for papers, symposium presentations, and poster presentations are invited on any topic of interest to amateur satellite enthusiasts. This year's focus is AMSAT's educational outreach. In particular, AMSAT-NA seeks papers on these topics: Students and education, the Amateur Radio on the International Space Station (ARISS) program, Echo, Eagle and other satellite-related topics. One-page abstracts are due by June 1, and final papers (hard copy or electronic) are due by August 1 for inclusion in the printed symposium Proceedings. Send abstracts and papers to Daniel Schultz, N8FGV, 14612 Dowling Dr, Burtonsville, MD 20866 or via e-mail <n8fgv@...>.

* Radio amateurs fill key NASA space flight positions: Two veteran astronauts and Amateur Radio licensees have been named to key space flight posts at NASA's Johnson Space Center (JSC) in Houston. Bob Cabana, KC5HBV, who has flown on four shuttle flights, has been named JSC Deputy Director. Ken Bowersox, KD5JBP, will replace Cabana as director of flight crew operations. Cabana succeeds Brock "Randy" Stone, who is retiring after 36 years with NASA that included work on the Apollo lunar missions, Skylab, the space shuttle, and the International Space Station. "These two appointments really enhance the strong team we have leading us into the space shuttle's return to flight and continuing space station operations,"

said NASA Associate Administrator for Space Flight William Readdy. JSC Director Jefferson D. Howell Jr said Cabana and Bowersox "bring a wealth of experience in human space flight and an understanding of the importance of space exploration. Their leadership will help!
us as we move forward in our journey of discovery." Cabana has logged more than 1000 hours in space. Bowersox has flown on five space missions and spent more than five months aboard the ISS as commander of Expedition 6, where he participated from NA1SS during Amateur Radio on the International Space Station (ARISS) school group and casual contacts.

* Gary Gordon, K6KV, wins QST Cover Plaque Award: The winner of the QST Cover Plaque Award for March is Gary Gordon, K6KV, for his article "Build a Puff-and-Sip Keyer." Congratulations, Gary! The winner of the QST Cover Plaque award--given to the author--or authors--of the best article in each issue--is determined by a vote of ARRL members. Voting takes place each month on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/qstvote.html>. Cast a ballot for your favorite article in the April issue of QST. Voting ends April 30.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League--The National Association For Amateur Radio--225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Jim Haynie, W5JBP, President.

The ARRL Letter offers a weekly e-mail digest of essential news of interest to active amateurs. The ARRL Letter strives to be timely, accurate, concise, and readable. Visit ARRLWeb <http://www.arrl.org> for the latest news, updated as it happens. The ARRL Web site <http://www.arrl.org/> offers access to news, informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled from The ARRL Letter.

Spoke w/ Bill Frankenburger organizer of the Tour d' Temple 100 km bike ride. Date is Sat, May 29. Starting time is 8 a.m. If they start on time the race should finish about noon or before. We will need about 8-10 hams to man the checkpoints along the way. Route will be the same as last two years. More than 150 bikers are expected in the event.

Bill says they will get the orange cones (10) from the City of Temple. He also will see if they have yellow flags. So, as it stands I do not expect to spend any money for those items. Only money spent will be for about two boxes of donuts for us before we get in place at our checkpoints. Bottled water might also be considered for each ham (think I can purchase wholesale). However, as we get closer to the date I intend to ask Bill if he will furnish the water.

We will use Tony's WB5TTY repeater...145.49... located at the VA.

73, Roy

592. Adding a CW ID feature to Digtrx

Yahoo group: Temple_ARC
Date: 2004-04-09 22:46:22 UTC
From: Charlie Schlieper
Topic: 592 Message: 592

Adding a CW ID feature to DIGTRX:

You can modify DIGTRX to function with a CW ID.
Credit for this idea belongs to Dan, AC5ZP, of Copperas Cove.

If the timing of the 1750-tone FUNCTION lasts a bit longer than your particular CW ID, you can choose to manually cut it OFF.

Here's what you do:
Make a CW ID WAVE file and put it inside the DIGTRX folder. (An easy way to do this is using a program called "WINMORSE2" which is easily available on the internet.) Rename the original file t1750d6.wav (inside DIGTRX) to "t1750d6-old.wav". Then rename the CW ID wave file that you created, to "t1750d6.wav".

DIGTRX will now send your CW ID when you click on the 1750-TONE button with your mouse. (The 1750-Hertz tone is NOT used in Central Texas for repeater access)

Another OPTION for a CWID is to use the AUXILIARY PROGRAMS selection feature of DIGTRX. MMTTY seems to work very well. Just program a MACRO called (CWID), using the technique: <[__~~~_~~~_~_~_~~~___\>.
(TEST is given as an example.)

Version 1.63 programs different than 1.65. In 1.65, you must allow for an brief initial tone keyup at the beginning. A trick of using less UNDERSCORES at the start seems to work. A little experience in programming and testing ID's inside MMTTY will quickly teach you what you need to know.

You can easily modify the MMTTY.INI file to allow tones lower than the default 910 Hertz. One of my preferred CW tones for IDs is 411 HERTZ. It provides a smooth sounding ID inside DIGTRX or MMTTY.
How to modify the MMTTY.INI file: Edit the file, go almost all the way to the bottom of the file, find [ComboList], change or add numbers to the MARK frequency list.
My line reads:
MARK=2125,2000,1700,1445,1275,1170.910,800,700,411
Save and exit.

By choosing a BAUD RATE of 56 inside the DECODE TAB of MMTTY SETUP, a slightly faster CWID speed is obtained.

The best method of utilizing a CW ID when using Digtrx, is simply the DIRECT one. Then by clicking on the modified 1750-tone button inside DIGTRX, you get an instant ID. You don't have to momentarily exit the program at any time.

73,
Charlie Schlieper, N5TD

594. Ham Radio for Dummies

Yahoo group: Temple_ARC
Date: 2004-04-09 05:46:41 UTC
From: john, ke5c
Topic: 594 Message: 594

NEWS & PRESS RELEASES

"Ham Radio for Dummies" by N0AX will be available from general and ham radio booksellers by 12 April. It's a real, yellow-and-black "for Dummies" book - this is not a late April Fool's article! Aimed at the beginning and prospective ham, it contains 384 pages of material, a tear-out cheat sheet, tons of Web links and references, tables, photos (there's even one of Riley Hollingsworth's station), and graphics. My goal was to write a book that "I wish I'd had when I was just getting started." Your assignment? Get one to a friend or neighbor that is thinking about joining us in our splendid hobby. The well-known Dummies cover and presentation should make them feel right at home. Check it out at your favorite bookseller or at
http://www.amazon.com/exec/obidos/tg/detail/-/0764559877/102-8264306-2739364?v=glance

Ward Silver, N0AX, is a QST Contributing Editor, editor of the e-mail newletter The ARRL Contest Rate Sheet, and author or many QST articles and puzzles.

You are cordially invited to the TSGARC dinner and program, Monday April 12 at the clubhouse, 3292 Speegleville Rd., halfway between Hwy 84 and Hwy 6, Waco.

6:00 - 7:00 p.m. "Spring Picnic" consisting of brisket, potato salad, baked beans, deviled eggs, desserts and ice tea.

7:00 p.m. Ken Winkler, State Director for Texas Army MARS will be our honored guest for the April program. He will be discussing the role and contributions of Ham radio through the MARS service.

SB QST @ ARL $ARLB010
ARLB010 FCC to Stop Accepting Pre-December 2003 Form 605

ZCZC AG10
QST de W1AW
ARRL Bulletin 10 ARLB010
>From ARRL Headquarters
Newington CT April 12, 2004
To all radio amateurs

SB QST ARL ARLB010
ARLB010 FCC to Stop Accepting Pre-December 2003 Form 605

Effective with Monday, May 3, receipts, the FCC's Wireless Telecommunications Bureau will dismiss any applications filed on an FCC Form 605 issued earlier than December 2003. Form 605, Quick-Form Application for Authorization in the Ship, Aircraft, Amateur, Restricted and Commercial Operator, and General Mobile Radio Service, is the hard-copy version of the Amateur Service application. The change does not affect applicants filing on-line with the Universal Licensing System (ULS) at, http://wireless.fcc.gov/uls/, said the FCC, which is encouraging on-line filing

ARRL VEC Manager Bart Jahnke, W9JJ, says the Form 605 announcement will affect the way ARRL has been making FCC Form 605 available. He says the League's widely distributed March 2001 Form 605 in a three-sheet ivory/buff-colored package with perforated pages will become obsolete for applications the FCC receives on or after May 3.

In the wake of the FCC's unexpected announcement, the ARRL is developing a replacement package that could require several more pages. It hopes to have it ready in time for Hamvention May 14-16.

The FCC has been accepting both older and current Form 605 applications that included a line (Item 9a) for a Taxpayer Identification Number, a Social Security number for an individual. The FCC would then issue the applicant an FCC Registration Number
(FRN) without additional paperwork. All amateur applicants must have and use an FRN when filing an application such as Form 605 with the FCC. Applicants attending VEC test sessions can still supply a Social Security number, which will result in automatic Commission Registration System (CORES) registration.

All amateur applicants must have and use an FRN when filing an application such as Form 605 with the FCC. Under the system going into effect in May, applicants not yet registered in CORES and filing on paper will need to file FCC Form 160, CORES Registration to obtain a FCC

Registration Number (FRN). After the FCC has issued an FRN, applicants also might want to file FCC Form 606 to associate the FRN with an individual's license record(s) and call sign(s). CORES registration data and FCC license data are maintained in separate FCC databases.

The completed Form 160 goes to a unique Washington, DC, FCC address to obtain the applicant's FRN. Once the FCC issues an FRN to the applicant, this number must be used when filing FCC Form 605, which goes to the FCC's Gettysburg, Pennsylvania, office. The two forms may not be mailed to Gettysburg together. Applicants need to have obtained an FRN via Form 160 before they can file a Form 605.

ARRL recommends that all amateurs file an on-line or paper Form 606 to associate their FRN with their license record(s) and call sign(s) in the FCC license database. Jahnke says the easiest way is to do this electronically via the ULS, and the process now is fairly straightforward.

The current edition of Form 605, dated December 2003, is available on the FCC forms page, http://wireless.fcc.gov/feesforms/index.html.

For more information or assistance, contact the FCC Consumer Center, toll-free, 888-CALLFCC (888-225-5322) and select option 2, or via e-mail at, fccmd@.... NNNN /EX

Austin SwapNet 04/11/04 de N5MNW, ARO & AARC. Website:
www.AustinHams.org

Easter Early-Risers and Rolling Stones,
Record Low temps and lots of rain here in Central Texas over the past
few days
dampened some outdoor activities but there were a few Easter-egg hunts
going on. Lori and I hope you all made it thru Lent had a great Easter.

Club meeting this Tuesday at ARL 10,000 Burnet. Topic- Rick KD5ABM
will bring a
Time-Domain Reflectometer. He will discuss the units operation and
"sweep" some
RF gadgets for loss and frequency response. Bring your RF switches,
dummy loads,
etc for a little RF evaluation!

Some sad news to report. Dan K5IQZ has become a Silent Key. He was a
big
part of the Texas Traffic Net and will be missed.

MS150 is rapidly approaching! Austin Hams are being called upon to
staff a
few breakpoints and traffic intersections along the Bastrop-Austin
route.
Our main involvement will be April 18th- Sunday morning thru
mid-afternoon. You'll need a decent ~25 watt mobile radio with a gain
antenna or erect a
portable station with a high antenna. Duties include contacting
Breakpoint staff,
relaying info on supplies and other race details.
If you can help, please contact one or all of the following:
Austin- Mike Lay n5ptn@..., Jeff N5MNW@... 255-6753
Houston- Mike Hardwick N5VCX@arrl.net 713-771-4625
See- www.houstonhams.org

On Sunday April 25th from 1-4PM, the Kincheonville Amateur Radio
Association
will hold a hands-on GPS class and Pot Luck Barbeque in Garrison Park,
6001
Manchaca Road. Lat 30 12.682 N; Lon 97 48.080 W
http://www.sss.org/~kr4ah/hunt/GPS_Hunt.pdf

>From Ray Hulley KD5TFH,
MSET-TX is looking for volunteers to help with communication at the
Republic of

Texas Biker Rally going on at the Travis County Expo Center from June 3rd thru
June 6th 2004. We are seeking Tech class or higher amateur radio operators. We
need people to staff our communications center and handle traffic with the EMS,
Security, and event staff. This center will need to be staffed 24 hours a day for the
entire event. We are looking at having two to three operators on duty at all times.
All persons interested in this opportunity may contact me, ray@... with
their name, call sign, and contact information. It would also be to their advantage
to advise me of their preferred volunteer time and date (s). I will do all I am able
to accommodate as many people as I am able to. Shifts will be six hours long. All
operators will be given free admission and will be fed while on duty. There will be
other perks that I am unable to elaborate upon at this time as they are still in the
negotiating phase. We are also looking for volunteers to help with our first-aid
station. This requires a current certification with TDH or NREMT at ECA or higher.
MSET-TX operates under the A/TCEMS SOCs at BLS level.

If you're not an ARRL member and are considering it, AARC/ARO will apply
$15 towards your AARC/ARO club dues if you sign up for first-time
ARRL membership through the club! Take advantage of dual signup, save money,
join ARRL and AARC/ARO simultaneously!
Contact John KG5O@... or Roger W5WIA@... for more details.

THE BOARD OF SUPERVISORS IN PIMA COUNTY THIS MORNING VOTED 4-1...TO LEAVE THE ORDINANCE AS WRIITTEN AND NOT ACT ON THE PROPOSAL. THERE WAS 30 PLUS HAMS AND 3 HOMEOWNERS AT THE MEETING! THE EFFORT WAS NOT EASY HOWEVER, THE LAWYER REPRESENTING THE AMATEURS COST ABOUT $7,000.00..THE RADIO COMMUNITY RAISED OVER $6,000.00 IN DONATIONS IN 12 WEEKS !!! LOTS OF FOOTWORK & NETWORKING HELPED IN THIS EFFORT.

ONE FOR THE GOOD GUYS !!!

FCC Letter to Texas Amp Builder.

In another action, Donal Hewitt, K5JLI was warned that his HF amplifier business, http://www.worth-more.com/ <http://www.eham.net/articles/www.worth-more.com> was in violation of Commission's rules and that "continued sale of non-certified equipment will subject you to fine or imprisonment, as well as an in rem seizure of non-certified equipment, in cooperation with the United States Attorney for your jurisdiction." In addition the FCC stated: "Such continued sale will also result in the designation of your Amateur Radio station license for a revocation proceeding, and your Operator license for a suspension proceeding. This is the last written warning you will receive about this matter."

609. HF Antenna Ladderline Coax

Yahoo group: Temple_ARC
Date: 2004-04-17 03:25:57 UTC
From: km5ew_2
Topic: 609 Message: 609

This may be a little off topic, but just wondering if anyone out there had a decent roll of ladderline coax that was willing to part with it. I would like to upgrade my current wire HF antenna and add a second one to boot. 300 ohm twin-lead is OK, but I would rather use the better-made 400 ohm ladder line.

Thnaks!

Warren Rowe / KM5EW

611. ARD9800 Digital Unit FORSALE***

Yahoo group: Temple_ARC
Date: 2004-04-19 04:34:16 UTC
From: Charlie Schlieper
Topic: 611 Message: 611

Hello All,

I have a "like new" ARD9800 Digital Voice Unit that I don't use
enough to justify keeping. It has been returned to California once for
a software UPGRADE. It also has the VIDEO MEMORY CHIP in it.
$650.00 value if purchased NEW. In mint condition - $500.00

73,
Charlie Schlieper, N5TD

Austin SwapNet 04/18/04 de N5MNW, ARO & AARC. Website:
www.AustinHams.org

Please be aware, this Motorola email address will change to Freescale
in the -very-
near future! If you are using it as a SPAM filter, please watch for the
change.
Jeff N5MNW

Solar Cyclists,
13,000 cyclists trekked from Houston to Austin, challenged by windy
but dry weather
conditions, road hazards, including aggressive motorists and -tacks- in
the roadway.
The finish line was just south of MLK and Congress- north of the Capital
Building! Hams all along the way from Houston, La Grange, Bastrop helped
keep track of the
course, routing ambulance, SAG and supply vehicles to where they were
needed. A
handful of us converged on the "Austin Net Control" area and erected an
HF-VHF-UHF- digital Field-Day setup anyone would be proud of. VHF and
UHF repeaters provided the
bulk of the comms, but nearly all forms of Amateur Radio were called
into service. APRS
kept Houston Command and Austin NCS aware of exact locations of the many
vehicles,
Echolink, IRLP and HF enabled Houston and Austin to quickly exchange
information.
It was a lot of work, but a very rewarding experience. Thanks to the
many Austin Hams
that volunteered your time. I have MS150 pins for all of you.
Mike N5VCX may have more to say at- www.houstonhams.org

Club officer and Board meeting this Tuesday at Marimont 38th/Guadalupe

On Memorial Day, May 31st, AARC/ARO has been asked to provide comms
for a multi
event at Auditorium Shores. Sounds like a great place for a MARS
special event station! I will contact Brad and see exactly what is
needed, but here is the info :
We are going to host an event for the fallen soldiers on May 31st at
Auditorium Shores.
We are having triathlon, Remembrance Service for the soldiers and
concert benefiting
the fallen heroes. We need your help with communications.
I hope you can help us. Take a look at our website and let me know if

you can provide
assistance in communications.
We would be looking for a command post run by you all and then shadows
for the race
committee for proper protocol.

Austin SwapNet 04/25/04 de N5MNW, ARO & AARC. Website: www.AustinHams.org

You may have noticed a change in the "from" line on this week's edition.
It likely has changed from "motorola.com" to "freescale.com". Motorola
recently launched its Semiconductor Products Sector (SPS) into a separate
business called "Freescale Semiconductor".
Please make changes to your address book, updating
jeff.schmidt@... as my work email address.
Jeff N5MNW

Global Positioners,
Four of us, plus two dogs, braved the drizzle Sunday afternoon for the
GPS picnic at Garrison Park. Hailey and Cotton chased each other while
Lori KM5MQ, Susan KD5LHI, John KR4AH and I visited, snacked and played with
GPS technology.
John really did a lot of planning for this event, ranging from simple "find
the coords"
exercises to complex ones where you have to do a bit of math to eventually
reach the goal. When the weather is better, the GPS Picnic will be
rescheduled.

1st Tue May 4- (ARO at Marimont) Roger Wines, W5WIA will share his field
day experience in Hawaii

2nd Tue May 11- (AARC at ARL) Multiple reviews of QSO logging software (for
Field Day plus).
Please contact Rick Kirchhof, KD5ABM if you have a package you can cover.
Call him at home 454-4306 or kd5abm@arrl.net

If you're not an ARRL member and are considering it, AARC/ARO will apply
$15 towards your AARC/ARO club dues if you sign up for first-time ARRL
membership through the club! Take advantage of dual signup, save money,
join ARRL and AARC/ARO simultaneously!

From Richard Prewitt, 742-1368, TARC Airshow TEAM LEADER..

Volunteers are to pick up tickets for 'T' Shirts and Armbands at the SECOND Entrance, not the main entrance and meet at the building in to the FAR RIGHT where the preliminary meeting was held.

Call 742-1368 for more info.

Relayed for Richard.

622. Killeen Voter Problem Fixed

Yahoo group: Temple_ARC
Date: 2004-04-29 02:01:12 UTC
From: Charlie Schlieper
Topic: 622 Message: 622

Hello to All,

Steve, NU5D, accompanied by Eddie, KD5UBP, made a trip over to the Killeen VOTER site for the 146.82 Temple REPEATER this morning, to check on a suspected problem. A faulty coax jumper at the radio end was the culprit. It was replaced, and test results that followed verified the Killeen VOTER RECEIVER for 146.82 is once again working at it's best.

Communications to WD9HNB, Tommy Taylor, who was MOBILE all the way into Lampasas was conducted with excellent results!

Some have wondered lately if you have to let the Temple 146.82 repeater completely drop out in order to allow those using either the Waco LINK, or any extension VOTER RECEIVERS, to have a chance. The answer is simple--- YOU DO NOT.

Thanks to Steve and Eddie for taking care of the problem.

73,
Charlie Schlieper, N5TD

I was wondering if there is a way for the Mr. Prewitt or someone to monitor the 147.82 or a simplex frequncy for talk in. If no one else dose, I probley will.

Alf

624. HT - Internal Antenna Connections

Yahoo group: Temple_ARC
Date: 2004-04-29 13:54:20 UTC
From: Charlie Schlieper
Topic: 624 Message: 624
Attachments: 2 described; binary payloads are missing from this source WARC

A quick note about your favorite HT...

It is quite common for Handy Talkie antenna connections (often BNC types), to work loose after a period of use. This helps contribute to a bad or broken RF connection of the center pin. It is easy to check an HT to insure the integrity of connection is good. Use a WATT METER designed for low-power, if available.

I have repaired many units, and they are not all alike. Some HTs are more difficult to access than others, and care must always be taken! I recently repaired an Alinco DR-580 HT, and the enclosed pictures are typical. You have to remove tiny screws to circuit boards which often cover the antenna connection. This can require that you remove a flat-cable or two. I use special tools to facilitate this, rather than pulling on the wires. One of the simplest tips I can give is: use a logical order of physical placement of tiny parts you remove, taking the time to observe where they came from. Some tiny screws are longer than others. Note the difference. Otherwise, you may easily loose your way home, upon reassembly. Also, dropping one of these small parts onto room carpet can be a blooming nightmare.

629. New Email Newsletter To Begin: "Texas Weather Roundup and Review"

Yahoo group: Temple_ARC
Date: 2004-05-02 02:48:42 UTC
From: km5ew_2
Topic: 629 Message: 629

Everyone, I will start publishing a new bi-weekly email newsletter that will cover Texas weather, as well as items related to weather. "Texas Weather Roundup and Review" will be sent out by email every other Wednesday to everyone that requests to be on the mailing list...for free! I am also considering a bi-monthly print newsletter that will require paid subscriptions, but I have not determined if I will follow through on that as of this time.

Anyone can contribute to this email newsletter. The topics can be anything weather-related: recent weather events, historical facts, personal storm pictures, Q & A, storm spotting, Amateur Radio, weather-related maps...just to name a few.

The first email newsletter will go out on May 12, with new issues following every two weeks thereafter. If you're interested in contributing material, please contact me ASAP!

I invite everyone that has a sincere interest in weather to subscribe to this newsletter; I really think you'll enjoy it.

Warren Rowe / KM5EW
Temple, Texas

631. May 29th Tour de Temple - From TARC Bulletin

Yahoo group: Temple_ARC
Date: 2004-05-03 10:28:38 UTC
From: Steve S. Bosshard (NU5D)
Topic: 631 Message: 631

Bill Frankenburger, organizer of the Tour d' Temple 100 km bike ride, says the event is set for Saturday, May 29. The starting time is 8 a.m. Roy Wells, N5HQR, coordinator for TARC's participation, says, "If they start on time, the race should finish about noon or before."

"We will need about 8 to 10 hams to man the checkpoints along the way," says N5HQR. "The route will be the same as the last two years. More than 150 bikers are expected in the event."

Frankenburger says their group will get the orange cones from the City of Temple. He will also see if they have yellow flags.

TARC will furnish donuts for club members at the assembly area prior to dispatch to assigned checkpoints. Bottled water will also be provided.

Communication will be on the WB5TTY repeater on 145.49 pl 123.0) located at the VA.

Yahoo group: Temple_ARC
Date: 2004-05-06 05:00:04 UTC
From: Carolyn Black
Topic: 635 Message: 635

The TSGARC is presently raising funds to move the W5TSG 147.320 repeater to a more efficient and higher location in order to increase its coverage. This is an open repeater for the use of all Amateur Radio Operators and back up for other clubs as well.

Donations for this endeavor can be made out to TSGARC and mailed to: TSGARC, P. O. Box 7754, Waco TX 76714-7754. Please specify "repeater fund" on the check.

Thanks to each of you for your support for the TXSG and TSGARC.

73,
Leon Cheney, k5zzm k5zzm@...
TSGARC President

Subject: W32A HiCap Battery (was [DILLO] Handheld)

Steve et all,

W&W Manufacturing, aka Battery-Tech, sells a 9.6v@1400mAh Nickel Metal Hydride
battery for the W32A (also fits the T7A and T7H). Their part number is
HC-024TCM-BP173M and it is the same physical size as the stock Icom BP-173. I
purchased a couple from them at Ham-Com in Arlington last year and am duly
impressed.

This is the current list of VE's for May 22nd. Several regular participants have other engagements that are certainly understandable. Thanks to all who have participated in the past and got things going.

Testing is set to start at 1:00PM. I do have the materials, sealed, from the ARRL and will get with Charlie and Kay to inventory them Monday.

Joe Robertson has graciously offered to be the test organizer and man in charge.

Floyd has asked that he and David Krauss, and John Dvoracek administer the code tests.

Spring 2004 VE TEAM - additional VE's WELCOME.

Subject: SCAM INFO

Subject: Credit card scam
My husband was called on Wednesday from "VISA", and I was called on Thursday from "MasterCard".

It worked like this: Person calling says, this is <name>, and I'm calling from the Security and Fraud Department at VISA. My Badge number is 12460. Your card has been flagged for an unusual purchase pattern, and I'm calling to verify. This would be on your VISA card which was issued by <name> bank. Did you purchase an Anti-Telemarketing Device for $497.99 from a marketing company based in Arizona?

When you say "No". The caller continues with, "Then we will be issuing a credit to your account. This is a company we have been watching and the charges range from $297 to $497, just under the $500 purchase pattern that flags most cards. Before your next statement, the credit will be sent to (gives you your address), is that correct?"

You say "yes". Caller continues... "I will be starting a Fraud investigation. If you have any questions, you should call the 800 number listed on your card 1-800-VISA and ask for Security. You will need to refer to this Control #" (Then gives you a 6 digit number). "Do you need me to read it again?"

(Caller then "needs to verify you are in possession of your card). Turn card over. There are 7 numbers; first 4 are your card number, the next 3 are the security numbers that verify you are in possession of the card. These are the numbers you use to make Internet purchases to prove you have the card. Read me the 3 numbers". Then says "That is correct." I just needed to verify that the card has not been lost or stolen, and

that you still have your card. Do you have any other questions? Don't hesitate to call back if you do.

You actually say very little, and they never ask for or tell you the card number.

But after we were called on Wednesday, we called back within 20 minutes to ask a question. Are we glad we did! The REAL VISA security department told us it was a scam and in the last 15 minutes a new purchase of $497.99 was put on our card. Long story made short, we made a real fraud report and closed the VISA card, and they are reissuing us a new number.

What the scam wants is the 3-digit PIN number. By the time you get your statement, you think the credit is coming, and then it's harder to actually file a fraud report. The real VISA reinforced that they will never ask for anything on the card as they already know the information!

What makes this more remarkable is that on Thursday, I got a call from a "Jason Richardson of MasterCard" with a word-for-word repeat of the VISA scam. This time I didn't let him finish. I hung up! We filed a police report, as instructed by VISA. The police said they are taking several of these reports daily! They also urged us to tell everybody we know that this scam is happening.

Please pass this on to all your friends, by informing each other, we protect each other.

661. Warning about false e-mails...

Yahoo group: Temple_ARC
Date: 2004-05-20 19:11:33 UTC
From: Charlie Schlieper
Topic: 661 Message: 661

I just got a message that appeared to come from management@... concerning the utility of my e-mail account, and informing me that many viruses were coming from my account. It further asked me to open an attachment for further instructions on "how to clean up my system."

Since I am very well protected against most viruses with Norton Internet Security, and religiously UPDATE the VIRUS DEFINITIONS, I became suspicious of this notification.

I checked with the TECHNICAL people at VVM and found out this message was NOT from them!

Be aware of such attemps, as it can look real. These guys who spoof this stuff are sharp.

Swappin' Festers,
Belton seemed well attended, I have not heard the exact number, but I talked with a
few folks that went to Dayton the week before and trekked to Belton without unloading.
The outdoor tailgate area had three full rows of goodies and the inside was wall-to-wall
as well. Lori and I emptied more from the garage and only brought home a few items.
I traded for a nice FT8100 mobile and now need some accessories for it to be better
installed in the Escort.
AARC's newsletter Editor Mitch London, KD5HCV won the grand prize and was there
to receive it- a Kenwood TS480 HF-6m rig! Congrats!

National Hurricane Center's WX4NHC sets annual test
The WX4NHC Amateur Radio station at the National Hurricane Center (NHC) in Miami will conduct its 2004 on-the-air station test Sunday, May 30, 1300-2200 UTC. "The purpose is to test all of our radio equipment, computers and antennas using as many modes and frequencies as possible,"

said WX4NHC Amateur Radio Coordinator John McHugh, KU4GY. "We will also be testing some new antennas and equipment that are being installed for this coming season." The test also will provide the opportunity to check

for any RFI problems at the center and for a few new operators to get some hands-on training as the 2004 hurricane season gets under way. McHugh emphasized that the WX4NHC event will be just an equipment and operator test. No nets will be activated. WX4NHC will be on the air on HF, VHF and UHF as well as on APRS. HF operation will center on 7.268, 14.325, 21.325 and 28.525 MHz on SSB; 14.035, 21.035 and 28.035 MHz on CW; and 14.070 MHz on PSK31. WX4NHC will also be on IRLP and /EchoLink/ South Florida-area VHF and UHF repeaters as well as 146.52 MHz FM simplex and 144.200 MHz SSB. Participating stations report call sign, signal report, location and a brief weather report ("sunny," "rain," etc). Include an SASE with QSL requests to W4VBQ. Due to security measures, no visitors will be allowed at NHC during this test. For more information, visit the National Hurricane Center WX4NHC www.wx4nhc.org/ Web page.

To: All

The Tour d' Temple 100K Bike Tour is this weekend, Sat, May 29. Needed are 8-10 radio operators to man checkpoints along the route and assist in traffic control. Event starts at the Mayborn Convention Center in Temple at 8 a.m. and lasts until about noon.

This is the 3rd year TARC has supported the event which is sponsored by the Temple Kiwanis Club. About 150 participants are expected.

We should assemble at the Mayborn Center NLT 7:30 a.m. I will brief and provide maps of the route. We will use Tony's WB5TTY's repeater 145.49 (tone 123) which is located at the VA. I plan to be on location NLT 7 a.m.

Cold drinks and doughnuts will be provided by TARC. This week I plan to obtain traffic cones and flags from the organizers. The organizers will also provide each TARC participant w/ a T shirt with the TARC patch shown.

Hope you can assist. Thanks.

73, Roy N5HQR

Request the above be placed on the Reflector.

670. VE Test Session Results

Yahoo group: Temple_ARC
Date: 2004-05-26 13:58:48 UTC
From: Steve Bosshard
Topic: 670 Message: 670

VE's Attending

Jim Coleman, Barbara K Schlieper, Michael Davis, Joseph Robertson, Floyd Bumpas, Ed Underwood, Martha Underwood, Ron Thompson, John Dvoracek, Charlie Schlieper, David Krauss, Al Lawrence, John Biles, Steve Bosshard

Sure hope I didn't miss anyone.

25 Candidates were served by this session. 18 Candidates received upgrades, 11 Technician, 5 General, and 2 Extra Class Licenses.

Results were overnighted to ARRL/VEC yesterday afternoon and should be in Newington by 10AM today.

Thanks to everyone who participated. Special Thanks to the folks in years past who got things going, and also to the folks who were ready to fill in if there were not enough active participants.

Til October 2,

73,

Steve

For the time being attachments are deleted on the TARC Reflector.
They will not be forwarded through the reflector. At least until
this last bunch of viruses goes away.

Be sure your virus protection is up to date.

There is a free virus program, AVG available at grisoft.com if you
are without and on the cheap.

678. RE: [Temple_ARC] DANGER - Typical VIRUS MESSAGE

Yahoo group: Temple_ARC
Date: 2004-05-28 21:59:53 UTC
From: Glenn Blum
Topic: 677 Message: 678

Steve,
I utilise a program called mailwasher which allows me to preview emails before the are sent to my computer.I can delete,bounce or blacklist any emails from my computer.The best thing its free program.
right now I have been using two other programs called spybot and adware.I found both to be exceptional programs for cleaning spy-wares,plus they are also free too.
So far I have yet to have any virus problems with AVG and my Wife and I have been running AVG for about 3 years now.
Back to adware/spyware if you ever run into a problem with a computer dialing up and not able to run the internet or emails and it just looks like the computer is not talking to the server then there is a good chance a very powerfull spyware is on the computer especially "gator" then burn the newest version of adware from the internet install it onto the effected computer, run it clean it out and you may have solved the problem.This happened to my wifes computer about 5 weeks ago and solved the problem within 15 minuites.
A little preventative maintennance goes a long way.

Glenn

Fellow Temple Amateur Radio Club members, I'm contemplating taking on the task of coordinating Field Day logging. The goals would be to have each active radio computer connected/controlled via a networked logging program feeding a common log file. If you have a computer controllable rig (most are) and an interface cable (usually to an RS232 COM port) that you would be willing to bring to Field Day, please e-mail me soon. If you would also be willing to bring your PC, that would be even better. This wouldn't be a committment, just a statement of willingness to commit if all goes well.

We probably use a variety of logging programs, and I would also like to hear if you think you know of a particularly easy to learn, networkable favorite. I've not used this one, but a few folks have suggested it, and it looks promising and would cost the club $10 as far as I can tell:

http://www.n3fjp.com/FD.htm

I think we would most likely have two transmitters (class 2A) which would only require two hf radios and two or three computers, perhaps laptops? Then we would need one or two VHF setups as well. So please e-mail me (just respond to this message) if you are interested and tell me what you might be able and willing to provide.

73, John

Should W5LM run two hf stations (1 phone, 1 cw) or three hf stations (2 phone, 1 cw) during Field Day? We could show a lot more thorough effort in 2A and manning just two stations for the 24 hours of the event will be difficult enough, especially covering the night hours. Running 2A and having a GOTA station would offer the flexibility of trying to get everyone who shows up to operate some and make at least one contact. The GOTA station can make up to 400 contacts, and there is a 100 point bonus if we get to the 100 QSO level. This station can be operated by novices, technicians - and here's the best part - *generally inactive hams *. You still have to operate within your privileges or have a control operator, so we would need general class control operators to cover the GOTA station, but that should be doable.

We are going to be using the N3FJP software, so sometime before Field Day download the free copy and take a quick look at it - http://www.n3fjp.com/ . The primary phone station will be an Icom Pro2 and the cw station will be a TenTec Orion. We still need a GOTA rig and a VHF rig, both with computer control capabilities, and a second phone rig if we run 3A instead of 2A. Here are the GOTA goals and rules:

4.1.1. Any Class A group whose entry classification is two or more transmitters may also operate one additional HF station without changing its base entry category, known as the GET ON THE AIR (GOTA) station.
4.1.1.1. This station must operate using a different callsign from the primary Field Day station.
4.1.1.2. The GOTA station may be operated by Novice, Technicians or generally inactive hams under their existing operating privileges, or under the direction of a Control Operator with appropriate privileges, as necessary. Non-licensed persons may participate under the direct supervision of an appropriate control operator. A list of operators and participants must be included on the required summary sheet to ARRL HQ.
4.1.1.3. This station may operate on any valid Field Day band and mode. As per FCC rules, this station must have a valid control operator present if operating beyond the license privileges of the participant using the station.
4.1.1.4. The maximum transmitter output power for the GOTA station shall be 150 watts. If the primary Field Day group is claiming the QRP multiplier level of 5, the maximum transmitter output power of the GOTA station may not exceed 5 watts.
4.1.1.5. A maximum of 400 QSOs made by this station may be claimed for credit by its primary Field Day operation. A 100-point bonus may be claimed by the primary Field Day operation if the GOTA station reaches the 100 QSO level.
4.1.1.6. The GOTA station may only operate on the Field Day HF Bands. Only one transmitted signal is allowed from the GOTA station at any time (see

Field Day rule 4).
4.1.1.7. The GOTA station does not affect the additional VHF/UHF station provided for under Field Day rule 4.1.2.

excellent point!! no casual operator would be denied the chance to make
some contacts simply because we had hit the 400 mark.

Agree! Are any of you trustees for another club callsign (not W5LM) that we could use for the Field Day GOTA station? I've requested the special event call W5T (Whiskey-5-Temple or Whiskey-5-Texas), but I don't know if they will allow that for Field Day, so I am looking for a backup callsign to use.

Not sure if W5T or similar can be used for a GOTA station, but I guess it's worth a try!

I just thought of something. I am willing to offer the Central Texas Storm Spotters call KD5ZDO to use as a GOTA call. I'm the trustee for that call, and it's available if you want to use it.

Thanks! 2A plus the "free" GOTA station, and it will really help to have some folks who know the software already. Hopefully the rest of us will download, install, and play with the free trial a bit: http://www.n3fjp.com/FD.htm beforehand.

694. FCC Response to my complaint

Yahoo group: Temple_ARC
Date: 2004-06-03 02:06:14 UTC
From: Anthony Mikulastik
Topic: 694 Message: 694

May 18, 2004

Mr. Anthony Mikulastik
3109 Glenwood Drive
Temple, TX 76502

RE: Complaint Concerning Bell County Communications Center

Dear Mr. Mikulastik:

This is in response to your complaint filed on January 5, 2004, regarding the Bell County Communications Center and club license W5BEC.

There has been no showing that this amateur station is operated by anyone other than amateurs, nor is there a showing that it is used or intended to be used for routine county business. Ownership of the equipment is not relevant under our rules. Therefore, the complaint is dismissed

CC: FCC South Central Regional Director

The above was taken from the ARRL web page today. It appears you don't need to have a real ham radio club with bylaws and members to have a Club License especially if Homeland Security money is involved. The complaint is now a published president and gives the green light for any government agency to form a club in name only and apply for a FCC Club License in the Amateur Radio Service. Some will view this as a good ruling which will provide "free" equipment to hams from government dollars. When the U.S. government hands out dollars there are always strings attached. I continue to feel Amateur Radio will be adversely affected by this FCC action. I might add the FCC totally ignored the fact there was no organized club in place. Also ignored by the FCC, was the specific use for the VHF Amateur Repeater in the government grant as an emergency communications system for hospitals and local government agencies as a backup to their regular communications system which invites unlicensed use should an emergency situation occur. Under the grant, amateur use was secondary.

Amateur radio has been a self policing group for many years. Under the private ownership of an individual or a club, the use of an amateur repeater could be closely regulated. Since one of the local area repeaters was paid for with government grant money the machine is basically wide open for anyone with a valid no-code tech (easy to obtain) amateur license to do as they please under the "Freedom of Speech Clause" of the U.S. Constitution. The control operator can try to cut the machine off but will be wide open to a Federal law suit for rights violations. Every person in the United States owns a part of the 147.140 machine in Bell County and can do with it as they please as long as they do not violate a federal law or regulatory rule. How will the time share of the repeater be decided among the millions of owners?

No doubt some federal court or agency will make those decisions. A ruling on one government funded amateur station will be binding on all the other government funded amateur stations. The federal dollar brings federal legal protection and massive head aches with it. I can see it now, someone who prefers to use foul 4-letter words when talking about his sex life feels his free speech rights have been violated and brings suit against the control operator for cutting him off and gets the ACLU to do it free of charge. Maybe some group will feel requiring an amateur radio operator license to use the government funded repeater violates their rights and file suit to make 2-Meters unlicensed so more tax payers can use the government repeaters. The radio makers would love to have a greatly expanded market and will support any action that increases sales. IF you say it can't happen all I have to say is Citizens Band.

Remember when Texas was not going to lower the speed limit to 55MPH? The feds said ok Texas, no 55 MPH speed limit then no more federal highway dollars. The federal dollar hook had already been set and the State of Texas started changing the speed limit signs.

Regardless of how well meaning the project was, government ownership of conventional ham radio stations has opened amateur radio up to some nasty possibilities we may all live to regret deeply. There are no free lunches! The monster has been created at a national level and cannot be undone! I hope I am wrong and none of the almost unlimited possible consequences come to pass which changes amateur radio to something we hardly recognize.

73,

Anthony Mikulastik

696. W5T approved!

Yahoo group: Temple_ARC
Date: 2004-06-03 15:53:05 UTC
From: john, ke5c
Topic: 696 Message: 696

The special event callsign, W5T (whiskey-5-Temple or Whiskey-5-Texas) as been approved and assigned to TARC for use by the GOTA (Get On The Air) station during Field Day. This station has to have its own callsign separate from W5LM. Now we need a bunch of novice, technician and generally inactive hams (and visitors) to come out and operate this station (with the help of a control operator when necessary). We can count up to 400 QSO's, so let's make that our goal. This is a separate station from the primarily cw and primarily phone stations that count towards being 2A:

4.1.1.2. The GOTA station may be operated by Novice, Technicians or generally inactive hams under their existing operating privileges, or under the direction of a Control Operator with appropriate privileges, as necessary. Non-licensed persons may participate under the direct supervision of an appropriate control operator. A list of operators and participants must be included on the required summary sheet to ARRL HQ.

2004 W1AW Field Day Bulletin Schedule
Day Mode Pacific Mountain Central Eastern

Friday CW 5:00 PM 6:00 PM 7:00 PM 8:00 PM

Teleprinter 6:00 PM 7:00 PM 8:00 PM
9:00 PM
Phone 6:45 PM 7:45 PM 8:45 PM 9:45 PM

CW 8:00 PM 9:00 PM 10:00 PM 11:00 PM

Saturday CW 7:00 AM 8:00 AM 9:00 AM
10:00 AM
Phone 8:00 AM 9:00 AM 10:00 AM 11:00 AM

CW 5:00 PM 6:00 PM 7:00 PM 8:00 PM

Teleprinter 6:00 PM 7:00 PM 8:00 PM
9:00 PM
Phone 6:45 PM 7:45 PM 8:45 PM 9:45 PM

Sunday CW 7:00 AM 8:00 AM 9:00 AM 10:00 AM

Phone 8:00 AM 9:00 AM 10:00 AM 11:00 AM

PSK31 9:00 AM 10:00 AM 11:00 AM 12:00 PM

W1AW will operate on the regularly published frequencies. The special PSK31
bulletin will be transmitted on the regular W1AW frequencies.
CW frequencies are 1.818, 3.5815, 7.0475, 14.0475, 18.0975, 21.0675,
28.0675 and 147.555 MHz.
Teleprinter frequencies are 3.625, 7.095, 14.095, 18.1025, 21.095, 28.095
and 147.555 MHz. (includes PSK31).
Phone frequencies are 1.855, 3.99, 7.29, 14.29, 18.16, 21.39, 28.59 and
147.555 MHz.
The times, frequencies and call for the West Coast run of the special W1AW
Field Day bulletin will be posted at http://www.arrl.org/contests/

702. 2004 ARRL FD Rules

Yahoo group: Temple_ARC
Date: 2004-06-05 07:25:16 UTC
From: Steve S. Bosshard (NU5D)
Topic: 702 Message: 702
Attachments: 1 described; binary payloads are missing from this source WARC

Field Day 2004 Rules
1. Eligibility: Field Day is open to all amateurs in the areas covered by the ARRL/RAC Field Organizations and countries within IARU Region 2. DX stations residing in other regions may be contacted for credit, but are not eligible to submit entries.
2. Object: To work as many stations as possible on any and all amateur bands (excluding the 60, 30, 17, and 12-meter bands) and in doing so to learn to operate in abnormal situations in less than optimal conditions. A premium is placed on developing skills to meet the challenges of emergency preparedness as well as to acquaint the general public with the capabilities of Amateur Radio.
3. Date and Time Period: Field Day is always the fourth full weekend of June, beginning at 1800 UTC Saturday and ending at 2100 UTC Sunday. Field Day 2004 will be held June 26-27, 2004.
3.1. Class A and B (see below) stations that do not begin setting up until 1800 UTC on Saturday may operate the entire Field Day period.
3.2. Stations who begin setting up before 1800 UTC Saturday may work only 24 consecutive hours, commencing when on-the-air operations begin.
3.3. No Class A or B station may begin their set-up earlier than 1800 UTC on the Friday preceding the contest period.
4. Entry Categories: Field Day entries are classified according to the maximum number of simultaneously transmitted signals, followed by a designator of the nature of their individual or group participation. Below 30 MHz, once a transmitter is used for a contact on a band, it must remain on that band for at least 15 minutes. During the period, the transmitter is considered to be transmitting, whether it is or not, for the purpose of determining transmitter classification. Switching devices are prohibited.
4.1. (Class A) Club / non-club portable: Club or a non-club group with three or more persons set up specifically for Field Day. Such stations must be located in places that are not regular station locations and must not use facilities installed for permanent station use, or use any structure installed permanently for Field Day use. Stations must operate under one callsign (except if a dedicated GOTA station is allowed which must be operated under a callsign as provided later in these rules), and under the control of a single licensee or trustee for the entry. All equipment (including antennas) must lie within a circle whose diameter does not exceed 300 meters (1000 feet). All contacts must be made with transmitter(s) and receiver(s) operating independent of commercial power mains. Entrants whom for any reason operate a transmitter or receiver from a commercial main for one or more contacts will be listed separately.
4.1.1. Any Class A group whose entry
classification is two or more transmitters may also operate one additional HF station without changing its base entry category, known as the GET ON THE AIR (GOTA) station.

4.1.1.1. This station must operate using a
different callsign from the primary Field Day station.
4.1.1.2. The GOTA station may be operated
by Novice, Technicians or generally inactive hams under their existing
operating privileges, or under the direction of a Control Operator with
appropriate privileges, as necessary. Non-licensed persons may participate
under the direct supervision of an appropriate control operator. A list of
operators and participants must be included on the required summary sheet
to ARRL HQ.
4.1.1.3. This station may operate on any
valid Field Day band and mode. As per FCC rules, this station must have a
valid control operator present if operating beyond the license privileges
of the participant using the station.
4.1.1.4. The maximum transmitter output
power for the GOTA station shall be 150 watts. If the primary Field Day
group is claiming the QRP multiplier level of 5, the maximum transmitter
output power of the GOTA station may not exceed 5 watts.
4.1.1.5. A maximum of 400 QSOs made by this
station may be claimed for credit by its primary Field Day operation. A
100-point bonus may be claimed

by the primary Field Day operation if the
GOTA station reaches the 100 QSO level.
4.1.1.6. The GOTA station may only operate
on the Field Day HF Bands. Only one transmitted signal is allowed from the
GOTA station at any time (see Field Day rule 4).
4.1.1.7. The GOTA station does not affect
the additional VHF/UHF station provided for under Field Day rule 4.1.2.
4.1.1.8. Participants are reminded that
non-licensed participants working under the direction of a valid control
operator may only communicate with other W/VE stations or with stations in
countries with which the US has entered a third-party agreement.
4.1.1.9. GOTA stations operate under a
single callsign separate from the callsign of the main group.
4.1.1.10. The GOTA stations does not
qualify as an additional transmitter when determining the number of
transmitters eligible for the 100-point emergency power bonus under rule
7.3.1.
4.1.2. Any Class A group whose entry
category is two or more transmitters may also operate one additional
transmitter if it operates exclusively on any bands or combination of bands
above 50 MHz (VHF/UHF) without changing its basic entry classification.
This station does not qualify for a 100-point bonus as an additional
transmitter. This station may be operated for the entire Field Day period
for the club and all contacts count for QSO credit. It is operated using
the primary callsign of the Field Day group.
4.2. (Class A - Battery) Club / non-club portable: Club or non-club group
with three or more persons set up specifically for Field Day. All contacts
must be made using an output power of 5 Watts or less and the power source
must be something other than commercial power mains or motor-driven

generator (e.g.: batteries, solar cells, water-driven generator). Other provisions are the same for regular Class A.
4.3. (Class B) One or two person portable: Club or non-club stations set up and operated for Field Day purposes by no more than two persons. Other provisions are the same for Class A. One and two person Class B entries will be listed separately.
4.4. (Class B - Battery) One or two person portable: Club or non-club stations set up and operated by no more than two persons. All contacts must be made using an output power of 5 Watts or less and the power source must be something other than commercial mains or motor-driven generator. Other provisions are the same as Class A. One and two person Class B - Battery entries will be listed separately.
4.5 (Class C) Mobile: Stations in vehicles capable of operating while in motion and normally operated in this manner. This includes maritime and aeronautical mobile.
4.6. (Class D) Home stations: Stations operating from permanent or licensed station locations using commercial power. Class D stations may only count contacts made with Class A, B, C, E and F Field Day stations.
4.7. (Class E) Home stations - Emergency power: Same as Class D, but using emergency power for transmitters and receivers. May work stations in Class A, B, C, D, E and F.
4.8. (Class F) Emergency Operations Centers (EOC): An amateur radio station at an established EOC activated by a club or non-club group. Class F operation must take place at an established EOC site. Stations may utilize equipment and antennas temporarily or permanently installed at the EOC for the event. Entries will be reported according to number of transmitters in simultaneous operation.
4.8.1. For Field Day purposes, an Emergency
Operations Center (EOC) is defined as a facility established by:
a) a Federal, State, County, City or other
Civil Government, agency or administrative entity; or
b) a Chapter of a national or international
served agency (such as Red Cross or Salvation Army) with which your local group has an established operating arrangement.
4.8.2. Planning of a Class F operation must
take place in cooperation with the staff of the EOC being activated.
4.8.3. Class F stations are eligible for all bonus points
under Field Day rule 7.3.
4.8.4. Other provisions not covered are the same as Class
A.

4.8.5. A Class F station may claim the
emergency power bonus if emergency power is available at the EOC site.
5. Exchange: Stations in ARRL / RAC sections will exchange their Field Day operating Class and ARRL / RAC section. Example: a three transmitter class A station in Connecticut which also has a GOTA station and one VHF station would send "3A CT" on CW or "3 Alpha Connecticut" on phone. DX stations send operating class and the term DX (i.e. 2A DX).
6. Miscellaneous Rules
6.1. A person who participates by making a QSO from one Field Day operation

may not subsequently work that same operation from which he participated to provide them point credit.
6.2. A station used to contact one or more Field Day stations may not subsequently be used under any other callsign to participate in Field Day. Family stations are exempt provided the subsequent callsign used is issued to and used by a different family member.
6.3. Each Phone, CW and Digital (non-CW) segment is considered a separate band. A station may only be worked once per band.
6.4. All voice contacts are equivalent.
6.5. All non-CW digital contacts are equivalent.
6.6. Cross-band contacts are not permitted.
6.7. The use of more than one transmitter at the same time on a single band-mode is prohibited. Exception: a dedicated GOTA station may operate as prescribed in rule 4.1.
6.8. No repeater contacts are allowed.
6.9. Batteries may be charged while in use. Except for class D stations, the batteries must be charged from a power source other than commercial power mains. To claim the power multiplier of five, the batteries must be charged from something other than a motor driven generator or commercial mains.
7. Scoring: Scores are based on the total number of QSO points times the power multiplier corresponding to the highest power level under which any contact was made during the Field Day period plus the bonus points.
7.1. QSO Points
7.1.1. Phone contacts count one point each.
7.1.2. CW contacts count two points each.
7.1.3. Digital contacts count two points each.
7.2. Power multipliers: The power multiplier that applies is determined by the highest power output of any of the transmitters used during the Field Day operation.
7.2.1. If all contacts are made using a
power of 5 Watts or less and if a power source other than commercial mains or motor-driven generator is used (batteries, solar cells, water-driven generator), the power multiplier is 5.
7.2.2. If all contacts are made using a
power of 5 Watts or less, but the power source is from a commercial main or from a motor-driven generator, the power multiplier is 2.
7.2.3. If any or all contacts are made
using an output power up to 150 Watts or less, the power multiplier is 2.
7.2.4. If any or all contacts are made
using an output power greater than 150 Watts, the power multiplier is one.
7.2.5. The power multiplier for an entry is
determined by the maximum output power used by any transmitter used to complete any contact during the event. (Example: a group has one QRP station running 3 Watts and a second station running 100 Watts, the power multiplier of 2 applies to all contacts made by the entire operation).
7.3. Bonus Points: The following bonus points will be added to the score, after the multiplier is applied, to determine the final Field Day score. Only Class A, B and F stations are eligible for bonus points. Bonus points will only be applied if the claim is made on the summary sheet and any

proof required is enclosed with the entry.
7.3.1. 100% Emergency Power: 100 points per
transmitter classification if all contacts are made only using an emergency power source. Free transmitters that do not count towards the group's total (GOTA station and free VHF Station for Class A entries) and do not qualify for bonus point credit. All transmitting equipment at the site must operate

from a power source completely independent
of the commercial power mains to qualify. (Example: a club operating 3 transmitters plus a GOTA station and using 100% emergency power receives 300 bonus points.)
7.3.2. Media Publicity: 100 bonus points
may be earned for attempting to obtain publicity from the local media. A copy of the press release, or a copy of the actual media publicity received (newspaper article, etc) must be submitted to claim the points.
7.3.3. Public Location: 100 bonus points
for physically locating the Field Day operation in a public place (shopping center, community park, school campus, etc). The intent is for amateur radio to be on display to the public.
7.3.4. Public Information Table: 100 bonus
points for a Public Information Table at the Field Day site. The purpose is to make appropriate handouts and information available to the visiting public at the site. A copy of a visitor's log, copies of club handouts or photos is sufficient evidence for claiming this bonus.
7.3.5. Message Origination to Section
Manager: 100 bonus points for origination of a National Traffic System (NTS) style formal message to the ARRL Section Manager or Section Emergency Coordinator by your group from its site. You should include the club name, number of participants, Field Day location, and number of ARES operators involved with your station. The message must be transmitted during the Field Day period and a fully serviced copy of it must be included in your submission, in standard ARRL NTS format, or no credit will be given. The Section Manager message is separate from the messages handled in section 7.3.6 and may not also be claimed for bonus points under that rule.
7.3.6. Message Handling: 10 points for each
formal NTS style originated, relayed or received and delivered during the Field Day period, up to a maximum of 100 points (ten messages). Properly serviced copies of each message must be included with the Field Day report.

7.3.7. Satellite QSO: 100 bonus points for
successfully completing at least one QSO via an amateur radio satellite during the Field Day period. Under the "General Rules for All ARRL Contests" (rule 3.7.2.), the no-repeater QSO stipulation is waived for satellite QSOs. Groups are allowed one dedicated satellite transmitter station without increasing their entry category. Satellite QSOs also count for regular QSO credit. Show them listed separately on the summary sheet as a separate "band." You do not receive an additional bonus for contacting different satellites, though the additional QSOs may be counted for QSO credit.
7.3.8. Alternate Power: 100 bonus points
for Field Day groups making a minimum of five QSOs without using power from

commercial mains or a petroleum driven generator. This means an "alternate" energy source of power, such as solar, wind, methane or water. This includes batteries charged by natural means (not dry cells). The natural power transmitter counts as an additional transmitter. If you do not wish to it to increase your operating category, you should take one of your other transmitters off the air while the natural power transmitter is in operation. A separate list of natural power QSOs should be submitted with your entry.
7.3.9. W1AW Bulletin: 100 bonus points for copying the special Field Day bulletin transmitted by W1AW during its operating schedule during the Field Day weekend (listed in this rules announcement). An accurate copy of the message is required to be included in your Field Day submission. (Note: The Field Day bulletin must be copied via amateur radio. It will not be included in Internet bulletins sent out from Headquarters and will not be posted to Internet BBS sites.)
7.3.10. Non-Traditional Mode Demonstrations: A maximum of 300 bonus points (100 points for each demonstration up to three) for setting up a demonstration of a non-traditional mode of amateur radio communications. This includes modes such as APRS, ATV, and SSTV. This bonus is not available for demonstration of a mode for which regular QSO credit is available, such as PSK31.
7.3.10.1. A portable packet system may be included as one of the demonstration modes. This system must include a temporary, portable node and must be completely separate from the existing packet infrastructure of your area.

7.3.10.2. Demonstration modes may not include communications carried outside of the amateur radio spectrum (such as Internet relay).
7.3.10.3. Frequency bands, such as 10 GHz are bands, not modes of communications and do not qualify for the demonstration mode bonus.
7.3.11. Site Visitation by an elected governmental official: A 100-point bonus may be claimed if your Field Day site is visited by an elected government official as the result of an invitation issued by your group.
7.3.12. Site Visitation by a representative of an agency: A 100-point bonus may be claimed if your Field Day site is visited by a representative of an agency served by ARES in your local community (Red Cross, Salvation Army, local Emergency Management, law enforcement, etc) as the result of an invitation issued by your group.
7.3.13. GOTA maximum achieved. A 100-point bonus may be claimed by a group whose GOTA station completes a minimum of 100 QSOs.
8. Reporting:
8.1. Entries may be submitted to the ARRL in one of three ways:
8.1.1. Via Field Day Web Submission site at www.b4h.net/cabforms/
8.1.2. Via email to fieldday@...
8.1.3. Via land postal or deliver service to Field Day Entries, 225 Main St, Newington, CT 06111.

8.2. Entries must be postmarked, emailed or submitted by July 27, 2004.
Late entries can not be accepted.
8.3. A complete Field Day Web Submission site entry consists of:
8.3.1. An official ARRL summary sheet which
is completed on the site;
8.3.2 Supporting information must be
emailed to fieldday@... or mailed by postal service. Supporting
information must include:
8.3.2.1. An attached list of stations
worked by band/mode during the Field Day period (dupe sheet or an
alpha/numeric list sorted by band and mode);
8.3.2.2. Proofs of bonus points claimed
(copies of visitor logs, press releases, NTS messages handled, photographs,
etc);
8.4. A complete email submission consists of:
8.4.1. An electronic copy of as ARRL
summary sheet completely and accurately filled out;
8.4.2. An attached list of stations worked
by band/mode during the Field Day period (dupe sheet or an alpha/numeric
list sorted by band and mode);
8.4.3. Proofs of bonus points claimed
(copies of visitor logs, press releases, NTS messages handled, photographs,
etc);
8.5. A complete land postal or delivery submission consists of:
8.5.1. A complete and accurate ARRL summary sheet;
8.5.2. An accompanying list of stations
worked by band/mode during the Field Day period (dupe sheet or an
alpha/numeric list sorted by band and mode);
8.5.3. Proofs of bonus points claimed
(copies of visitor logs, press releases, NTS messages handled, photographs,
etc);
8.6. Complete station logs are not required for submission. The club should
maintain log files for one year in case they are requested by ARRL HQ.
8.7. Cabrillo format log files are not required for Field Day entries.
8.8. Digital images of proof of bonus points are acceptable.
9. Miscellaneous
9.1. The schedule of bulletin times for W1AW is included in this
announcement. While W1AW does not have regular bulletins on weekends, the
Field Day message will be sent according to the schedule included with this
announcement. The W1AW bulletins will be transmitted on the regular W1AW
frequencies listed in QST. The PSK31 bulletin will be transmitted on the
W1AW teleprinter frequencies
9.1.2. The special Field Day bulletin will be transmitted from station
XXXXX on the West Coast as included in the bulletin schedule.
9.2. See "General Rules for All ARRL Contests," "General Rules for All ARRL
Contests on Bands Below 30 MHz," and "General Rules for All ARRL Contests
on Bands Above 50 MHz" (November 2001 issue of QST) for additional rules.

9.3. Remember that the national simplex FM calling frequency of 146.52 MHz
should not be used for making Field Day contacts.

9.4. The complete Field Day information package may be obtained by:
9.4.1. Sending a SASE with 4 units of
postage to: Field Day Information Package, ARRL, 225 Main St., Newington,
CT 06111;
9.4.2. By downloading from the Contest
Branch home page at: http://www.arrl.org/contests/forms
9.5. For additional Field Day information or questions contact:
contests@... or phone (860) 594-0232.

To: Ham-ATV@yahoogroups.com
Subject: [Ham-ATV] ATV at Field Day

This year the Baton Rouge ARC will be back at the Baton Rouge Observatory for another great Field Day. In addition to this being the biggest socal event of the year and a great contest type event we like to display several modes of operation. In the past couple of years SouthEast Louisiana REACT has set up a network of APRS digipeaters as well as IRLP and linked repeater systems. We, SELA REACT, are planning on setting up a APRS demo to show off the benefits of this mode. The SELA REACT tower trailer will also be ther and I have talked with my Team president about using the 10 watt UHF ATV station that SELA REACT has in an operators position on the trailer. Visitors would be able to see the grounds of the observatory via a camera mounted atop the tower and broadcasting through the SELA REACT ATV transmitter. Additionally, I will have my small, 100mwatt UHF transmitter and a couple of spare 9 volt batteries to demonstrate it's uses during Field Day. Of course, since this is a BRARC event and many members of SELA REACT are also members of BRARC, we will not be wearing REACT uniforms or other items so as to not upset some of those in the local club which would worry that we are there to recruit for SELA REACT.
Do any other clubs or groups have plans for using ATV at Field Day this year?
Steve,
SELA REACT, BRARC, BR RASC, AARC, ARRL and probably a few others I've forgotten.

Want to get into Echolink?

I have for sale an extra WB2REM & G4CDY'S

ULTIMATE LINKING INTERFACE
For ECHOLINK, E-QSO, ILINK, All Digital Sound Card Modes
http://www.ilinkboards.com/indexuli1.html

Has Never been used, I only opened the shipping box to inspect.
Completely Assembled Board In Box!!

Asking $75.00 & I'll pick up the shipping..

Contact me either via Email n5zxj@... on the 147.140 repeater
for more information.

Thanks,

Gerald -- N5ZXJ

I'm looking to get more involved in contesting during the rest of 2004 into 2005 if my work schedule allows. I plan on entering the 2004 Texas QSO Party - Single Operator (Sept 25-26), ARRL Sweepstakes (SSB), and others if I can. Anyone interested?

I have enjoyed some of the VHF/UHF contests, especially the ones on 6m. I don't get on to compete for the awards, but enjoy giving folks a contact they may need. They say 6m is the Magic Band, it is... Usually it is quiet, not even static (almost), but get on and call CQ Contest, and they'll come out of the wood work whether it is a contest or not!

things were probably pretty good this afternoon for the arrl vhf qso party which actually runs until 9 pm local tomorrow if you missed it today.

http://www.arrl.org/contests/rules/2004/june-vhf.html

we made a trip to austin, and i worked a few folks on the way down:

2004 VHF QSO Party KE5C/R

Worked from EM11

Band	Date	Time	QSO#	Call worked	Sent	Rcvd	Qth

6SSB	13-Jun-04	01:10	13	W5ZL	59	59	em10

i used my ft857 running 100 watts to my hiq which i think is working as a 3/4 wave vertical at this frequency. it was tuned on the lower end of 14

mhz (3 X 14 = 42 mhz), and i only shortened it (raised resonant frequency) a bit, so i'm thinking i took it up to around 17 mhz which would be 3/4 on 50 mhz, but dunno for sure. i heard a lot more weak stations that i couldn't work, although i didn't try too hard.

73, john

Relocation of Lampasas Skywarn Weather System Repeater

Tower Building and Barbeque (Pot Luck) , Swimming Pool Fun (26 Jun 2004)

We will have fun while working!

Location 13 Dana Dr Lampasas TX

Contact: 254-458-8112/512-556-4730

Site/Project Manager: Tommie Taylor / Harold Bates

Advantages:

1.. High Speed Internet access for Weather Station and Video
2.. 8 Miles Closer to Lampasas (City) Better coverage
3.. Closer to the Link into temple (SwLink)
4.. Echolink Direct Connection to repeater controller
5.. Quicker Maintenance of repeater system
6.. Generator Backup on Site
7.. Remote control of computer VIA Local Network as opposed to Phone Link
8.. Auto patch capabilities with unlimited voiceoverIP long distance
9.. Autopatch into repeater via Vox for hams without radios

Project Date:

1.. Pre assembly to begin19 Jun 2004
2.. Assemble to begin on 26 Jun 2004
3.. Removal of repeater from old site on 3 Jul 2004
4.. Setup repeater 4 Jul 2004

Personnel Needed: 10 Each or more

1.. 3 each to begin prep of anchor holes for guy wires and Guy Wire Assembly
2.. 3 each on ground for the operation of jinn pole
3.. 1 each tower climber for the assembly of tower structure
4.. 1 each Radio technician for proper setup of audio for repeater
5.. 1 each cook to manage grill for Barbeque
6.. 1 each as spare for parts runs

Equipment needed:

1.. Auger Gas powered
2.. Post hole digger
3.. Safety belts
4.. Tools
5.. Rope
6.. Guy cables

7.. Turn buckles
8.. Pot luck item (Not Required but can do)

NEED VOLUNTEERS IF YOU CAN HELP PLEASE CALL ME:

729. CTSS Major Facelift and Update

Yahoo group: Temple_ARC
Date: 2004-06-19 01:55:19 UTC
From: Warren's Mail
Topic: 729 Message: 729
Attachments: 1 described; binary payloads are missing from this source WARC

There are about to be some major changes in CTSS effective on Monday, June 21:

1) The CTSS group title will be changed. CTSS has grown from a small group started on Yahoo! Groups for fun to a large and dedicated volunteer organization that helps cover much of the eastern half of Texas. As a result, the name Central Texas Storm Spotters has become a misnomer; it's not just Central Texas anymore!

I have determined a new name for the group, and if there are no significant objections, the new name will become the Lone Star Storm Spotters Network, or LSSN. (Only two S's in the acronym.) This new name will better reflect the geographic diversity of our members. A new logo will be required, and changes to the CTSS site at http://www.centexstormspotters.net/ will have to be made. The main CTSS site URL will remain the same for now, but expect changes later on.

2) Most of the CTSS (or LSSN) coordinator titles will be changed. The Northern Coordinator title will become the North Texas Coordinator, the Southern Coordinator will become the South Texas Coordinator, and the Coastal Coordinator will become the Gulf Coast Coordinator. The changes in the title names will better reflect geography more exact than previously done, and will allow room to diversify geographically as the group grows (i.e., add an East Texas Coordinator, West Texas Coordinator, for examples). The other Coordinator titles (EchoLink and Forecast) will remain the same.

3) I will set up a member profile form that ALL prospective and current members of the CTSS/LSSN list must fill out. Yes, I realize that some of you have already filled out a questionaire for CTSS, and we appreciate it. However, using this new member profile form will allow our newly updated organization to keep a current database that will contain basic member information (such as name, address, phone number, email address, county location, communications capabilities, emergency and/or relief organization liaisons, etc). This current member listing will allow us to be able to provide better logistics and to be able to provide help where it would be needed the most. Each of the coordinators will keep a current copy of this important database, and it will also be made available to LSSN members only.

NOTE: If you do not wish to fill out the member profile form, you will be removed from the CTSS/LSSN member list. You must also realize that filling out the member profile form makes you an active member; therefore you must abide by the policies that LSSN will abide by. These will be proposed, discussed, and decided soon after the changeover is made.

4) A new Yahoo! Group will be established, and the name Lone Star Storm Spotters Network (LSSN) will be the name of the Yahoo! site. As previously explained, the current CTSS site will remain, but basic changes will occur in the future for that site as well. On July 1, the CTSS Yahoo! Group site will be deleted.

5) I will file the organization name change with the FCC soon after the change; I will file for a vanity call sign shortly after the FCC confirms the organization name change.

I would like to hear your comments. You can either post your comments on the CTSS Yahoo! Group site or email me directly if you are not a CTSS list member. The deadline for comments is 10:00 pm on Sunday, June 20, and I will make the final decisions as how to proceed after proper consultation.

Thank you as always...

And just when I was getting comfortable... I no longer confuse CTSS with CTCSS! Hey Warren, here's a curve, how about Combined Texas Storm Spotters. That way this old gray bearded fella doesn't have to re-learn anything... Actually, whatever is best for the group. I don't know that I would qualify as a "Charter Member", but I have seen the group grow, and do better lately. I enjoy reading the posts, and the Nets. I plan to get more active during the lull in wx activity, and try to be better prepared for anything coming at us. I've "re-learned" a lot lately. Things I had once learned are comong back, and there is much more to learn and utilize. Just let me know how Karen and I can help.
73,
Paul N5XMV

To: bosshard@...
Subject: Field Day 2004 PSA Available From HOTARC

Greetings ARRL Members of North Texas,

The Heart O' Texas ARC has created a 30 second public service announcement that you can send to your local broadcast radio stations to help promote Field Day 2004. The audio file, in MP3 format, is available on the web at http://hotarc.org/events/Field_Day_2004.mp3. This was prepared and released for anyone's use by Scott Shafer KD5MLY in Waco, TX.

Many of your local radio stations will be happy to play a spot like this. Just email it to the station manager. You might want to attach a brief notice of your local Field Day site location to make it more personal. Many thanks to HOTARC for this very valuable service.

This weekend, HOTARC will be defending their #1 status for 2A in North Texas. I visited their first-rate FD site last year and I'm betting they do well again. So take advantage of the PSA they created and give them a run for their money.

Best of luck to all on Field Day 2004!

73,
Roy Rabey - AD5KZ
ARRL NTX SM

ARRL North Texas Section
Section Manager: Roy C. Rabey, AD5KZ

Father's Day Sons & Daughters,
Still lots of Ham Activity in the next few months!
Field Day this weekend- June 25, 26, 27. July 4th is the next weekend,
Summerfest Aug
6-7th, so get active and have fun!

Lori and I took a few days off this past Father's Day weekend for
HamCom and a Six
Flags vacation. We hope you all had a good time while we were away.
HamCom's Friday morning setup and noon start times were perfect for
us. We came
up late Thursday and stayed at a nearby hotel. We met Hotel clerk
Travis (forgot the call),
he and his Dad are hams and knew all about the event. Saturday started
out slow but the
crowd appeared around 9:30 for brisk sales and activity till 1-2PM.
Rain dampened outdoor
sellers and chased some inside in the afternoon. I picked up another
MFJ-1278 and a
92-AH 12V battery for FD use and Lori acquired her first boat anchor
from Mike Currie.
Not an R-390 but a -real- anchor!
The Swap Meet was pretty successful for us, so we decided to spend
some of our
earnings at Six Flags. We got there right at 10AM and stayed till 10PM.
A twelve-hour
day full of rides, shows and adventure. Lori has been feeling pretty
good lately, so she
tried a few easy coaster rides (the new bed must be helping!). Later in
the day, she
actually rode the Shock Wave, a smooth rail coaster with -two- loops!
She left the more
physically demanding rides like Batman, Mr. Freeze, wooden coasters and
the Titan to me.
The Titan has two very tight radius turnabouts that really force the
G's!

Below is a small tutorial from Bruce W3NJ. It details info for any
Field Day group wanting
to participate in NTS-formatted packet message handling on 145.73. We
will try on odd
hours after the contest has begun- 3PM, 5PM, 7PM on Saturday, 9AM, 11AM
on

Sunday. Voice traffic will be passed on 146.55.
In preparation, please load up Winpack (V6.80 available from
peaksys.co.uk) and NTS
(from www.levektronix.com) with your TNC and make sure it's useable on
145.73.
For NTS, the main thing that needs to be set is:
"F2" (same as "Files","Options")
Make sure "Internal Terminal" is unchecked
Make sure "Winpack External" is checked
Make sure "Format for BBS" is checked (more on this below) Other NTS
Settings are also on this "Options" screen, including callsign, name,
location that should be set. The other items to set, depending upon your
TNC model, is your "mycall" and other
operating parameters. Shouldn't be anything "unique" in this area.
Re: "BBS format" checked, it sends the standard packet traffic header:
(ST<zipcode>@NTS<state>, e.g. "ST 78787@NTSTX". It will also add the
"/EX" at the end of the message to complete the BBS-style message
format.

If you're not an ARRL member and are considering it, AARC/ARO will
apply
$15 towards your AARC/ARO club dues if you sign up for first-time
ARRL membership through the club! Take advantage of dual signup, save
money,
join ARRL and AARC/ARO simultaneously!
Contact John KG5O@... or Roger W5WIA@... for more details.

Phone: 254-773-1102

FOR IMMEDIATE RELEASE

NEWS SUMMARY: Central Texas Hams Gear Up to Set Long Distance Contact Records and

Practice Emergency Communication Skills

(TEMPLE, June 21, 2004) – Dozens of Central Texas Amateur Radio operators will work 'round the clock this weekend to set up field radio communication stations, get on the air, and contact thousands of other operators in the US and Canada while participating in the American Radio Relay League's Field Day.

According to Oscar Houser, President of the Temple Amateur Radio Club, Field Day is the annual "shakedown run" for the ARRL's National Field Organization. "Field Day is a way for hams to get outdoors and have fun under some difficult conditions," Houser says. "But it's also a chance to

fine-tune emergency communication skills. We use generators and battery power, and we set up antennas in the field. The idea is to put together a self-sufficient, working station quickly and begin making contacts."

The ARRL Field Organization has been effective in establishing emergency communications nets during floods, tornadoes, hurricanes, fires, earthquakes and other major disasters. Members of formal emergency organizations such as the Amateur Radio Emergency Service (ARES) and the Radio Amateur Communication Emergency Services (RACES) regularly participate. The League estimates that more

than 35,000 hams participate in Field Day every year.

Temple's Field Day operations will be at the Texas Early Day Tractor and Engine Association's 40 acre site on Eberhardt Road. Set up begins at 9 a.m. on Saturday, June 26. The public is invited.

For more information, contact Steve Bosshard, TARC's Field Day Chairman, at 773-1102. Information is also available on the club's website at www.tarc.org.

SUMMARY: Central Texas Amateur Radio operators to contact thousands of other hams throughout North America in the nation’s largest ham radio on-air event.

WHO: Licensed Amateur Radio Operators from Temple, Belton, Killeen, Moffat, Troy, and other Central Texas cities.

WHAT: Hams will set up and operate field radio stations to contact other hams throughout the US and Canada over 24 hours. Objective is to see who can make the highest number of contacts during the contest period.

WHERE: Texas Early Day Tractor and Engine Association's 40 acre site on Eberhardt Road.

WHEN: 9 a.m., June 26 to 1 p.m., June 27 (contest period is 1 p.m. Saturday to 1 p.m. Sunday).

WHY: Participation in the American Radio Relay League’s Field Day. Field Day is a competition as well as a “trial run” for emergency communication skills used during disaster situations. Amateur Radio operators practice communication skills under primitive conditions, with generator and battery-powered equipment and portable antennas. Special awards are given for “alternative” power sources such as solar, wind and methane. Photo opportunities, interviews, activities of local participants in an important

national Amateur Radio event. See all Amateur Radio communication modes in action, including voice, code, packet radio, teletype, and satellite.

CONTACT: Steve Bosshard, (254) 773-1102.

Outgoing mail is certified Virus Free.

739. Updates - Amateur Radio Software

Yahoo group: Temple_ARC
Date: 2004-06-24 17:18:24 UTC
From: Charlie Schlieper
Topic: 739 Message: 739

1. Digtrx Version 1.49 was released June 21, 2004, by Roland Zurmerly, PY4ZBZ.

2. I believe the best Version of THROB is THROB2.5x3.3 which was modified by DL5SWB. There is a Version 2.6 by G3PPT, which would seem more recent, but it is NOT the same. The Throb2.5x3.3 version modified by DL5SWB, Wilfried Burmeister, came out in late 2003 (September), and appears to be superior to other versions. Download it at: http://www.qsl.net/dl5swb/

3. UISS Version 4.0.0, by Guy, ON6MU (this is a new callsign--he was ON1DHT), was released June 16, 2004. Download at: http://users.skynet.be/on1dht/uissdownload.htm I believe they are still using his old callsign on the URL.

4. WSJT (Meteor Scatter) Version 4.7.0 recently came out, but some older computers with Windows 98 first edition should probably use Version 4.3.4 instead. Both versions have the new improved JT65 (reference the older version JT44), as well as the newly optimized JT6M mode for 50-MHz 6-meter work.
Download at: http://pulsar.princeton.edu/~joe/K1JT

5. WinMorse Version 2.0.0 is an excellent way to generate a CW ID wave file, for use with WSJT. It does all the work for you and makes it easy. Install the program, go to Convert, Audio Files, and choose "Make Morse-Wave (.wav) File." Insert your CALLSIGN and name the file. Download at: http://www.winmorse.com/

Note: You may have to add the suffix ".exe" on the end of the download file, depending on the source of download, such as www.dxzone.com/ (go to software, click on "morse code training" and look for WinMorse2)

6. The latest version of HamScope is still 1.54, by Glen Hansen, KD5HID. HamScope is my favorite program for CW, as it conveniently allows you to use a shared COM PORT for both conventional PTT and HARD-KEY CW keying. The program automatically handles the change for you when CW mode is selected, and HamScope does an outstanding job in decoding MORSE CODE. http://www.qsl.net/hamscope

---Enjoy Ham Radio!

741. Programming in 437.55 MHz for FD

Yahoo group: Temple_ARC
Date: 2004-06-24 19:20:45 UTC
From: Charlie Schlieper
Topic: 741 Message: 741

There is a possibility that the ISS (International Space Station) could use both VHF and UHF this Field Day. The traditional packet-- uplink 145.990, downlink 145.80 (Offset = 190 kHz); Voice-- uplink 144.490, downlink 145.80; and the newly added-- 437.550 MHz Simplex on UHF.

Remember that using three pre-programmed channels for each of the 2-meter modes is sufficient for the Doppler shift, but you will probably need to use at least double that for compensation on UHF, if not more. In a crude make-shift effort, one could use five channels, with 5-kHz offsets, but I recommend using NINE to ELEVEN CHANNELS for the serious contender. (You could leave out the very ENDS-- Channels 1 and 11 and get by.)

TX freq RX freq Doppler OffSet
1 437.540 437.560 +10 kHz -20 kHz
2 437.542 437.558 +8 kHz -16 kHz
3 437.544 437.556 +6 kHz -12 kHz
4 437.546 437.554 +4 kHz -8 kHz
5 437.548 437.552 +2 kHz -4 kHz
6 437.550 437.550 0 kHz 0 kHz <--- Cntr Freq
7 437.552 437.548 -2 kHz +4 kHz
8 437.554 437.546 -4 kHz +8 kHz
9 437.556 437.544 -6 kHz +12 kHz
10 437.558 437.542 -8 kHz +16 kHz
11 437.560 437.540 -10 kHz +20 kHz

Ref: Credit to AMSAT for basic INFORMATION used.

73,
Charlie, N5TD

Relocation of Lampasas Skywarn Weather System Repeater

Tower Building and Barbeque (Pot Luck) , Swimming Pool Fun (26 Jun 2004) Saturday

We will have fun while working!

Still could use some more help..

Bring the kids to play in the pool...

Location 13 Dana Dr Lampasas TX

Contact: 254-458-8112/512-556-4730

Site/Project Manager: Tommie Taylor / Harold Bates

Advantages:

1.. High Speed Internet access for Weather Station and Video
2.. 8 Miles Closer to Lampasas (City) Better coverage
3.. Closer to the Link into temple (SwLink)
4.. Echolink Direct Connection to repeater controller
5.. Quicker Maintenance of repeater system
6.. Generator Backup on Site
7.. Remote control of computer VIA Local Network as opposed to Phone Link
8.. Auto patch capabilities with unlimited voiceoverIP long distance
9.. Autopatch into repeater via Vox for hams without radios

Project Date:

1.. Pre assembly to begin19 Jun 2004
2.. Assemble to begin on 26 Jun 2004
3.. Removal of repeater from old site on 3 Jul 2004
4.. Setup repeater 4 Jul 2004

Personnel Needed: 10 Each or more

1.. 3 each to begin prep of anchor holes for guy wires and Guy Wire Assembly
2.. 3 each on ground for the operation of jinn pole
3.. 1 each tower climber for the assembly of tower structure
4.. 1 each Radio technician for proper setup of audio for repeater
5.. 1 each cook to manage grill for Barbeque
6.. 1 each as spare for parts runs

Equipment needed:

1.. Auger Gas powered
2.. Post hole digger
3.. Safety belts
4.. Tools
5.. Rope
6.. Guy cables
7.. Turn buckles
8.. Pot luck item (Not Required but can do)

748. Austin Swap Net

Yahoo group: Temple_ARC
Date: 2004-06-28 19:54:59 UTC
From: Steve Bosshard
Topic: 327 Message: 748

Austin SwapNet 06/27/04 de N5MNW, ARO & AARC. Website:
www.AustinHams.org

Soggy Field Day Troops,
Many local Ham groups held Field Day activities this past weekend. I
hope you
got a chance to get out and see some real Amateur Radio in action!

FD 2004 will be remembered as a fairly realistic taste of a real
disaster situation.
As always, there were plenty of challenges with weather, propagation and
the
usual logistical issues.

Many heartfelt thanks to all who made Field Day a success. We had more
volunteers
than expected and ran out of FD 2004 pins. If they're still available,
I'll see that
every one of the setup/teardown crew gets one.

At Anderson High, we erected all HF band/mode QRP W5KA and QRO W5TQ
stations
plus VHF/UHF. Friday setup was relatively clear, but Sat and Sun were
drizzly with
sometimes drenching rain. One thing learned is- MNW needs to get better
tents!
On Sunday at 17:45Z, it cleared up and we had bright, hot sun for
teardown.
WCARC's and Austin sites passed our usual NTS message traffic but this
year using
2m packet. This was a first, as we usually tie up a station and op for
quite some
time passing by voice. Tom N5TW and I passed around 14 pieces in well
under an hour.
Another first- we computer logged contacts using N3FJP's software and
ARES jumppkit
laptops. The result was accurate, readable records -AND- we didn't
worry about the
paper blowing away! We respect Murphy's influence, tho' and were also
paper-logging
using W5SIO's three-fold technique.

We got some great media coverage from KXAN, KVUE and KEYE with taped
interviews
of club officers and other volunteers. KXAN's Sally Hernandez peppered
the Sunday

morning show with live interviews and video of the operations. She tried -soooo- hard
to make me mis-pronounce "Canada" -again- this year but I kept my wits about me!

Stuart K5KVH was our main coordinator, elmering and making sure all stations had
what was needed.
K5EJL's BBQ went several dB into the excellent quality scale, due in great part to Rick
Sheldon's attending the fire and cooking. During a lull in Saturday's storms Brisket,
Sausage, Chicken, fixin's and dessert was devoured by the crew. Gene WA5PAX attended the generator, keeping AC power flowing. Joe N5HPC kept a watchful eye on battery levels and lighting. Lee W5LHC and a few others put together a cool 802.11 logging network that worked
fine at shakedown, but had some problems FD weekend. We'll try again next contest! TCREACT set up the Hospitality and Public info tent with lots of fliers and info. Mike N5LUQ did many functions and engineered the large loop antenna over the football
field. This year, a few stations classified the 100watt loop as "LOUD". Lew W5IFQ positioned his 100watt station on the opposite end of the tennis courts,
making hundreds of voice, CW and RTTY/digital contacts.

There were so many other of the 35+ operators, volunteers and equipment providers to mention that I don't have enough words or time to describe here.
You all performed brilliantly and I'll be proud to serve next to you if/when we get
deployed for real.

If you're not an ARRL member and are considering it, AARC/ARO will apply
$15 towards your AARC/ARO club dues if you sign up for first-time ARRL membership through the club! Take advantage of dual signup, save money,
join ARRL and AARC/ARO simultaneously!
Contact John KG5O@... or Roger W5WIA@arrl.net for more details.

752. Digtrx Version 1.51 June 30, 2004

Yahoo group: Temple_ARC
Date: 2004-06-30 20:12:02 UTC
From: Charlie Schlieper
Topic: 752 Message: 752

For those who enjoy computer sound-card digital modes,
DIGTRX version 1.51 was released today, June 30, 2004.
This new version has extended the number of SPLIT FILES
possible, and now allows a CALLSIGN to be added to
filenames without problems in split mode.

I have successfully used the SPLIT-FILE mode and it
works great; however, the utility in HF with variable
propagation conditions might pose some practical limits
on the number of files used.

Note: The split-file utility of 1.51 is NOT compatible with version 1.50.

Charlie Schlieper, N5TD

Please note that I am the owner of the 146.780 repeater in Hillsboro.
wb5yfx. the tone to this repeater is 123.0 not the 136.5 as you have noted.

761. Belton Parade

Yahoo group: Temple_ARC
Date: 2004-07-03 08:14:21 UTC
From: Steve Bosshard
Topic: 761 Message: 761

4th (3rd) of July Parade in Belton. TARC will help with radio and logistics. Meet at the Fleetwood Mfg Parking lot, 8A Sat Morning.

From the West take Loop 121 North to Sparta Road and turn Right.

From Temple and IH 35 take 6th Street West to Main (FM317) and take Commerce or Sparta Road Right to the Industrial Park - I believe Sparta Rd has just opened from Mail going West.

Proposed 147.300 + offset, 88.5 tone - N5DJJ Repeater. Alternative 145.555, simplex tone 71.9.

CU There,

Steve

762. Reminder - End of CTSS and Yahoo Website; Change to LSSN on July 5

Yahoo group: Temple_ARC
Date: 2004-07-04 23:20:58 UTC
From: Warren's Mail
Topic: 762 Message: 762
Attachments: 1 described; binary payloads are missing from this source WARC

Here's a final reminder: On July 5, Central Texas Storm Spotters (CTSS) and its site on Yahoo Groups will be no more. The organization will become the Lone Star Storm Spotters Network (LSSN), and there will be a Yahoo! Groups site of the same name (http://groups.yahoo.com/group/LSSN/). The main CTSS site (http://www.centexstormspotters.net/) will remain, but changes will be made there to reflect the new name.

If you had been an active member of CTSS and wish to continue with LSSN, or have been on the mailing list as an affiliate and would like to be affiliated with LSSN, please contact me as soon as possible. I will send you a LSSN Member Profile Form, and when you receive it, please note somewhere on the form that you and/or your group would like to be affiliated with LSSN. If you wish to be an individual active member of LSSN and had not been previously with CTSS, just sign it as normal and you will be noted as such.

Any questions, please email me at km5ew@hot.rr.com.

Thank you as always to everyone for your past and present support of Central Texas Storm Spotters, and as we go into the future as the Lone Star Storm Spotters Network.

764. KC5EGC UPGRADES LICENSE CLASS

Yahoo group: Temple_ARC
Date: 2004-07-05 18:13:44 UTC
From: Terry Hashman
Topic: 764 Message: 764

Hello Fellow Operators,
Just a quick note to let you all know that I finally upgraded my license after 10 years as no-code tech. I passed the general written last october. Went to the williams, Az hamfest this past weekend and passed the code and extra class written.
If anyone would like to share your hf schedules, maybe I can hold a QSO with you now on HF...
I am running an Icom 706M2G to a 20meter inverted vee right now. Have a Yaesu FL-2100B amp and the FT-847 but have to get a bigger tuner..

Drop a line when you can.. KC5EGC@...

Check out my webpage www.KC5EGC.net

I also am licensee of a repeater my buddy here put up on 147.10 and ge was 2 440 repeaters up also.. pictures from the top of Mt. Lemmon can be seen at www.KC0LL.net

From: Steve Bosshard
Topic: 327 Message: 767

Austin SwapNet 07/04/04 de N5MNW, ARO & AARC. Website:
www.AustinHams.org

RF Patriots,
Lori and I enjoyed a very active three day weekend. Six meters has
been open
quite regularly lately. Lori and I logged a few SSB contacts from the
Midwest. Lori
got the contest bug and joined the OMISS net where she assists net
members make
contact into Texas.
Saturday, after the usual Waterloo Ham Breakfast, Fry's trip and a few
garage sales,
we packed up the cooler and went to Frontier Days festival at Old
Settler's Park. We
toured the handicraft and food vendor areas, then parked ourselves in a
shady spot
to listen to a few C&W bands play. Not bad for $5 per carload!
Sunday, we trekked to a friends & family picnic -way- past Lago Vista.
We made it
back home in time to head back to Old Settlers for the Symphony concert
and
July 4th fireworks display. The music, fireworks and free watermelon
were great!
Monday, I spent the day playing with antennas and generally clearing
some
old rusty hardware from the back yard. I put the 6m Vertical (from
Field Day) up
for Lori to have more signal on six!

AARC Aug 10- FIELD TRIP to Decker Power Plant!!!
Rick- KD5ABM has confirmed the Decker Power Plant tour. All attendees
must
complete the waiver form, available at the July and August AARC/ARO
meetings
and online. On the waiver everyone needs to enter their driver's
license or TX ID
number. Upon arrival at the power plant, everyone will be required to
show ID.
August 10th (the second Tuesday), members should arrive between
6:00-6:30PM
Reggie Horton, the plant manager, will conduct and coordinate the tour.
Based
upon up to 35 people attending, two tours will be conducted
simultaneously.

Let me know if you have any other questions. Thank you, Candice Scott
972-9532
(de KD5ABM) As you can see, they require advance counts and the
completion of a
waiver form. We need to be very specific about this tour. To attend,
members must
have the form done by the 27th and be at Decker at the right time.
Note that it will NOT be possible for people to jump in or tag along at
the last minute.
73, Rick

Here's a link to KE5BCK- Troy Kimmel's Skywarn book, as seen on
AustinHams.org. www.utexas.edu/depts/grg/kimmel/Skywarnbook2004.pdf

If you're not an ARRL member and are considering it, AARC/ARO will
apply
$15 towards your AARC/ARO club dues if you sign up for first-time
ARRL membership through the club! Take advantage of dual signup, save
money,
join ARRL and AARC/ARO simultaneously!
Contact John KG5O@... or Roger W5WIA@... for more details.

769. TARC Summer HAM CLASSES

Yahoo group: Temple_ARC
Date: 2004-07-07 16:48:07 UTC
From: Charlie Schlieper
Topic: 769 Message: 769

I have coordinated a Summer HAM RADIO CLASS to begin on MONDAY, August 16, 2004, at 7PM, at the fellowship hall (regular meeting place for TARC) at the Western Hills Church of Christ, running SIX WEEKS, meeting from 7PM to 9PM, MONDAY and THURSDAY nights. The class ends on Thursday, September 23, 2004, about a week before VE TESTING on Oct 2, 2004 Belton Ham Expo.

We will strive to conduct UPGRADE CLASSES as well, depending on available resources. This is an advanced NOTICE of the planned CLASS activity.

Last Club Meeting Tony Mikulastik proposed, and there was a second and question that TARC Sponsor Ham Radio Classes at the Temple PD for peace officers and their families, and TARC to fund materials for participants under age 17, and Tony to chair the process and coordinate with Charlie.

Wonder how best TARC can support both projects, or integrate the two.

Regardless count on my support.

771. DIGTRX 1.52 released July 7th

Yahoo group: Temple_ARC
Date: 2004-07-07 17:23:49 UTC
From: Charlie Schlieper
Topic: 771 Message: 771

Amateur Radio sound-card Software UPDATE notice:

Digtrx, Version 1.52 was released July 7, 2004.

Version 1.52 has JP2 improvements, conversions with codification of pictures--whole or split files. The Split function was improved allowing fully automatic reception.

Comparisons of splitted transmissions in one example showed 518-seconds without split, versus 368-seconds with split function, or indicated as a "split gain" of 147-seconds. (Info PY4ZBZ)

Download through www.digtrx.com site.

776. New MMSSTV110.exe Version released

Yahoo group: Temple_ARC
Date: 2004-07-08 23:57:55 UTC
From: Charlie Schlieper
Topic: 776 Message: 776

Hello,

A new version of MMSSTV was released on July 7, 2004, (MMSSTV110.exe). The new MMSSTV version 1.10 is 1.217kB in length and contains some interesting new features--some briefly listed:

* Added CW button to the TX window
* Added some contest options for the FSKID
* Sound option now in template color bar
* Added TxID button
* Log backup function now included
* TxCH feature allows selection of left or right sound outputs
* Improved text and color setup functions in template window
* Added font size buttons, and bold and italic choices
* User-customizable font buttons (F1-F14)
* Better precision of TONE frequency
* Fixed some minor bugs adding some improvements

Download at: http://www.qsl.net/mmhamsoft/mmsstv/

An additional file <MMSSTV-XP.zip> is available also which unzipped into your MMSSTV folder will give it the Windows XP look and feel. Information referenced: JE3HHT, Makoto Mori, MMSSTV Version 1.10

779. Some NOTES on AUDIO Levels...

Yahoo group: Temple_ARC
Date: 2004-07-09 20:45:30 UTC
From: Charlie Schlieper
Topic: 779 Message: 779

Just a few NOTES on proper Audio levels...

Some programs are more forgiving of improper set LEVELS,
but it is best to have your AUDIO LEVELS---both XMIT and RECV, set
properly. This is especially true in programs like DIGTRX, which require
linear audio reproduction throughout. Improper audio levels can distort
waveshapes, causing more decodes to fail. Even MMSSTV tends to
produce grainy poor quality pictures if the audio levels are way off.

In DIGTRX, when the XMIT level is properly set, it will produce
a CLEAN WATERFALL display and provide an optimum chance for a
successful receive decode on the other end.

One way to check your DIGTRX receive level is look at the bottom
LEVEL indicator while receiving a file. It should indicate in light green,
without dark green or red. A better way, assuming you have a good
reference station, is to set your waterfall to COLOR, turn the AGC
OFF, and recieve TUNING TONES. The tones should produce a
"yellow-blue" on top, a thin yellow in the middle, and a stronger
yellow on the bottom. If a CALLSIGN is sent, it should mostly be BLUE.
(Don't forget to turn the AGC back ON, and set the WATERFALL back
to WHITE when you are finished)

Checking for a "broadband-linear" response can be done in
several ways. A rough check would be to open the squelch on the radio
and see if your entire waterfall band is consistently white. (One way to
observe how your rig can affect this item is to vary your IF SHIFT, DSP,
or switch in FILTERS for test while watching the waterfall. If you have
your DSP turned ON while using DIGTRX, make sure it is set to a very
WIDE setting, to provide a broad linear response, or simply switch DSP
to OFF.

I have observed one or two older VHF/UHF radios that have a
terrible audio response for use with programs like DIGTRX, but most modern
radios have no problem and do just fine. An excellent way to check the
system linearity without special test equipment is to use a special
TWO-TONE wave file which produces a crossed "X" in the waterfall.
The "X" lines should appear consistent all across the waterfall for best
results.

Note too that the "Average Power Output" from some digital mode
programs will NOT be the same. You may get a high percentage from RTTY--
(near 100%), and SSTV--(about 90%), yet other programs such as MT63 in
the 1kHz wide mode produces from 6% to 10%. (MT63 has a peak-to-average
ratio of from 10 to 13 dB) This means a radio set to 100-watts should be putting
out less than 10-watts on MT63! This could be misleading and cause someone

to keep adjusting the level UP and UP untill everything becomes DISTORTED.

DIGTRX waterfall pics can run an average watt meter reading of around
25% to 30% of max. (DIGTRX waterfall pics tend to run lower output readings
than transmitting full 8-bands of data, and can require lower levels for xmit)

Of course, a perfect DECODE in DIGTRX will only occur if all the levels
are correctly set, and the transmission/reception is basically NOISE FREE.
However, the percentage of redundancy provides limited correction of flaws.
But I can't stress the importance of getting your AUDIO LEVELS correctly
set up. It will help a great deal in providing optimum performance.

A while back I published a modification of a Sound-Card in the TARC
bulletin showing how to devise a feedback LOOP between the LINE-OUT and
the LINE-IN, using 2.2k ohm series resistors for isolation, but many computer
systems simply do not need this. Go into the "properties" of your Recording
Control, and select the "Mixed-Output" instead of the "Line" or "Mic." This
allows you to decode and "see" everything you transmit out, on your waterfall.

Enjoy Ham Radio!

July 12, 2004 - TSGARC Dinner and Program - Everyone's Invited

6:00 - 7:00 p.m. TSGARC Dinner: Hamburgers, hot dogs, hot links and all the trimmings plus dessert and ice tea.
7:00 p.m. Program: The program this month is really a dynamic approach to "hands-on" operation of a ham station. We will have 4 stations of hands-on instruction:
Station 1-The studio
a-ATV operation net control
b-Slo-scan operation
c-2m operation
d-HF operations
e-General net control desk operation

Station 2-The ATV Van
a-Set up operation
b-ATV and Slo-scan operations
c-Other radio stations

Station 3-Mobile ATV station
a-How to set up mobile
b-The equipment orientation
c-The actual transmission hands-on

Station 4-Mobile Slo-scan
a-How to set up Mobile
b-The equipment orientation
c-The actual transmission of slo-scan hands-on

The TSGARC clubhouse is located at 3292 Speegleville Rd. in Waco, halfway between Highway 6 and Highway 84.

QST de W1AW

ARRL Bulletin 20 ARLB020

>From ARRL Headquarters

Newington CT July 7, 2004

To all radio amateurs

SB QST ARL ARLB020

ARLB020 FCC Sets New Vanity Fee Start Date: August 6, 2004

The FCC has announced that the new Amateur Radio vanity call sign regulatory fee of $20.80 for the 10-year license term will go into effect August 6. Applicants for amateur vanity call signs will continue to pay the $16.30 fee per vanity call sign application received by FCC until the new fee goes into effect. The FCC says it expects to collect close to $162,000 from 7800 Amateur Radio vanity call sign applicants during Fiscal Year 2004. See the FCC's annual Report and Order (Docket MD 04-73) on the Web at HYPERLINK "http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-04-146A1.doc"http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-04-146A1.doc

for details on their assessment and collection of regulatory fees for FY2004.

Austin SwapNet 07/11/04 de N5MNW, ARO & AARC. Website:
www.AustinHams.org

Aerial Acrobats,
Lori and I tried to get motivated this weekend, but it was just too
hot for most
any outdoor activities besides grilling shrimp shish-kabobs. A brief,
welcome rain
shower on Sunday during the cooking made for a nice afternoon.

AARC has received the IRS paperwork and it's official!
We are now a 501.c.3 entity! Many thanks to all the past and present
officers
and members who had a hand (or foot) in this effort.

AARC July 13 meeting at ARL will be a "Hands on Hamming" session with
a
live demo of crossband repeating. Bring your dual-band HT's and
experience
advantages and pitfalls using this mode.

AARC Aug 10- FIELD TRIP to Decker Power Plant!!!
Rick- KD5ABM has confirmed the Decker Power Plant tour. All attendees
must
complete the waiver form, available at the July and August AARC/ARO
meetings
and online. On the waiver everyone needs to enter their driver's
license or TX ID
number. Upon arrival at the power plant, everyone will be required to
show ID.
August 10th (the second Tuesday), members should arrive between 6:00 -
6:30PM
Reggie Horton, the plant manager, will conduct and coordinate the tour.
Based
upon up to 35 people attending, two tours will be conducted
simultaneously.
Let me know if you have any other questions. Thank you, Candice Scott
972-9532
(de KD5ABM) As you can see, they require advance counts and the
completion of a
waiver form. We need to be very specific about this tour. To attend,
members must
have the form done by the 27th and be at Decker at the right time.
Note that it will NOT be possible for people to jump in or tag along at
the last minute.
73, Rick

Marlon Brando, who passed away July 1, was an Amateur Radio operator.

His (US) callsign was KE6PZH and French Polynesian call was- FO5GJ.

If you're not an ARRL member and are considering it, AARC/ARO will
apply
$15 towards your AARC/ARO club dues if you sign up for first-time
ARRL membership through the club! Take advantage of dual signup, save
money,
join ARRL and AARC/ARO simultaneously!
Contact John KG5O@... or Roger W5WIA@... for more details.

Subject: [DILLO] BPL hits Central TX

FYI,

>From a Central TX industry news email service.

Broadband Horizons to offer Broadband Over Power Lines
Central Texas-based Broadband Horizons has launched broadband over power lines (BPL) in three Texas communities. Texas is now one of a handful of states, including Virginia, Indiana and Kentucky that have implemented BPL. The successful pilot projects were launched in mid-June in Blanco, Burnet and Weimar, Texas. According to Mike Steele, Burnet's city manager, the city has had great success with the initial pilot project and is expanding it to additional parts of the community. BPL delivers Internet connections just like cable and DSL but over existing power lines. By plugging a small modem into any outlet and a computer into the modem, there is a connection to the Internet with no other installation needed. Broadband Horizons is led by Bob McClung, managing director; and Michael Bates, vice president of sales and marketing. McClung was president and CEO of Momentum Online, an Internet service provider. Bates led the creation of more than 25 wireless high-speed Internet networks in Texas as founder and president of Summa Associates.

From: Dennis Olson
Topic: 789 Message: 789

Hello Folks,

Here is some information concerning the Kenwood TM-V7A with vertical lines on the display.

I had sent mine into Kenwood Service Center East on 3 May 2004. Was received at Kenwood Service Center East on 6 May 2004. Repaired at Kenwood Service Center East on 7 May 2004. One day turn around. Shipped back out from Kenwood Service Center East on 7 May 2004 and received back on 13 May 2004. My Kenwood TM-V7A was nearly three years old. Was fixed free of charge. Only charge was the cost to UPS it to Kenwood Service Center East which was eleven dollars.

Very positive results!! Another very satisfied customer!!!

From: kd5owo
Topic: 792 Message: 792

I sent Broadband Horizons an email with my concerns about bringing BPL into Texas, and the threat BPL has to Amateur Radio in Central Texas. This is the response that I got back, I thought I would post this here, because it looks like Broadband Horizons are going to do things the right way, and I only hope that we don't suffer here in Texas like they did in Iowa.

QUOTE:
Hi Steve,

Thanks for your message, I do appreciate your input.

Our pilots are very small, and one of the purposes of the trial is to measure for any effects on Amateur Radio.

The manufacturer we have chosen is the only equipment already within compliance of FCC power guidelines. IT is also the only equipment choice that allows for adjustment of power levels remotely vial software interface. There are other BPL manufacturers which undoubtedly are not within FCC guidelines.

I also realize that the FCC should make more bandwidth available, so BPL equipment can operate without potential interference. There is discussion on this issue currently.

I do welcome you to come and check any of our pilot service areas to see if our deployment creates any for harmful interference, we are depending on Amateur Radio to be part of our pilot process.

Thanks again,

Bob McClung

July HAM Gathering
July 31, 2004
6:00 p.m.
Harbour Restaurant
4200 Skeet Eason Road
in Airport Park at Lake Waco

The restaurant is a BYOB at this time.

There is no cost to enter Airport Park to go to the restaurant. Just inform the gatekeeper you are going to the restaurant.

If you will be attending, please R.S.V.P. to me no later than July 19th. You can reach me at kd5nev@... or (254) 366-6167.
73's for now my friends !!!!
To all our members and friends:
I had the pleasure to try the evening meal at the Harbour Restaurant on Lake Waco at Airport Park. This folks, is Waco's best kept secret!!! Atmosphere with the watercraft and waterfowl is suburb and really relaxing and the service is excellent. I tasted the blackened catfish and the filet mignon wrapped in bacon...WOW...they were the most tender and delicious entrees I have tasted in Central Texas in a long time. Y'all need to make this one and if you can't...take the family...really in-expensive and the lunch menu has all kinds of other things on it as well.
73's and don't be on a diet. Leon, k5zzm (see below for menus or open attachments)

797. Need some assistance

Austin SwapNet 07/18/04 de N5MNW, ARO & AARC. Website: www.AustinHams.org

Damas e Hombres de Communicado,

What a wonderful weekend weather-wise! Lots of sun and a little breeze was a welcome relief from hot & muggy.

Lori and I went to the last evening of the Old Settler's music festival. A few local C&W bands played and at around 8:30, Ray Price took the stage for an hour and a half show. The building was packed, so many folks sat outside watching and listening to Ray's golden tones. I've got pictures of Ray and his son Cliff's band performing "For The Good Times".

I spent Sunday packing the trailer for Summerfest (Aug 6-7). Not with electronic carrion, but Hospitality Suite (rm 738) supplies and with hundreds of QST and other Ham Radio magazines. We will label the mags with AARC logo stickers and give them away at the club info table.

This in from Chuck KB5YKJ- Texas has BPL in it!

Broadband Horizons to offer Broadband Over Power Lines (in Texas)

Central Texas-based Broadband Horizons has launched broadband over power lines (BPL) in three Texas communities. Texas is now one of a handful of states, including Virginia, Indiana and Kentucky that have implemented BPL. The successful pilot projects were launched in mid-June in Blanco, Burnet and Weimar, Texas. According to Mike Steele, Burnet's city manager, the city has had great success with the initial pilot project and is expanding it to additional parts of the community.

BPL delivers Internet connections just like cable and DSL but over existing power lines. By plugging a small modem into any outlet and a computer into the modem, there is a connection to the Internet with no other installation needed.

Broadband Horizons is led by Bob McClung, managing director; and Michael Bates, vice president of sales and marketing. McClung was president and CEO of Momentum Online, an Internet service provider. Bates led the creation of more than 25 wireless high-speed Internet networks in Texas as founder and president of Summa Associates.

Visit the Broadband Horizons web site at www.broadbandhorizons.com.

-NOTE- deadline to register for Decker Power Tour is ARES mtg at Marimont July 27!!

AARC Aug 10- FIELD TRIP to Decker Power Plant!!!

Rick- KD5ABM has confirmed the Decker Power Plant tour. All attendees must complete the waiver form, available at the July and August AARC/ARO meetings and online. On the waiver everyone needs to enter their driver's license or TX ID number. Upon arrival at the power plant, everyone will be required to show ID.

August 10th (the second Tuesday), members should arrive between 6:00 - 6:30PM Reggie Horton, the plant manager, will conduct and coordinate the tour. Based upon up to 35 people attending, two tours will be conducted simultaneously.

Let me know if you have any other questions. Thank you, Candice Scott 972-9532

(de KD5ABM) As you can see, they require advance counts and the completion of a waiver form. We need to be very specific about this tour. To attend, members must have the form done by the 27th and be at Decker at the right time.

Note that it will NOT be possible for people to jump in or tag along at the last minute.

73, Rick

If you're not an ARRL member and are considering it, AARC/ARO will apply

$15 towards your AARC/ARO club dues if you sign up for first-time ARRL membership through the club! Take advantage of dual signup, save money, join ARRL and AARC/ARO simultaneously!

Contact John KG5O@... or Roger W5WIA@... for more details.

Subject: [QRP-L] John Kraus, W8JK SIlent Key :^(=

John Kraus, W8JK died a the age of 94 today.

Kraus, a creative thinker, made several significant contributions to the antenna world in general and Ham Radio in particular. A professor at Ohio State University, he also contributed significantly to radio astronomy.

Prior to his invention of the W8JK antenna in the mid 30s, it was commonly thought that to get more gain from an antenna it had to be made bigger and bigger. Kraus realized that by placing elements closer together and forcing a phase shift that gain could be realized from an antenna much smaller
than conventional arrays at the time. This was not generally accepted thinking
among the professional EE community at the time and he had difficulty publishing professionally, so he published it in Radio magazine, a forerunner to the present CQ magazine. The W8JK antenna was a popular antenna for many years, in many forms and derivatives, including the ZL special and W7EL's field day special.

Kraus invented the helix antenna after seeing the then new Traveling Wave Tube (TWT) amplifier demonstrated at an OSU seminar. The TWT uses a tightly wound helix to amplify by traveling waves of electrons. Kraus asked the
lecturer if the helix radiated. The lecturer replied no, that the circumference was too small. Kraus realized that the larger helix might make an effective circularly polarized antenna. Kraus went home that evening and wound one with a larger circumference and the helix antenna was born. The
helix antenna has been a main stay of the space community since its inception.

Kraus also invented the corner reflector antenna after realizing that the method of images could be implemented physically. It was a widely used antenna for UHF TV and point to point microwave transmission for many years.

Kraus also invented the Big Ear radio telescope at OSU after realizing that electrically steering an antenna was far simpler than moving giant dishes.

Kraus was the author of "Antennas", an excellent textbook on antennas. It is still in print, in the second edition, more than 50 years after its initial publication. He will be missed. - Dr. Megacycle KK6MC/5

801. Digtrx Version 1.53a - July 21

Yahoo group: Temple_ARC
Date: 2004-07-21 18:53:55 UTC
From: Charlie Schlieper
Topic: 801 Message: 801
Attachments: 1 described; binary payloads are missing from this source WARC

Digital Mode Software UPDATE...

A new DIGTRX version 1.53a was released July 21, 2004.
It has an improvement in the SPLIT MODE with the elimination
of "FILLERS" at the ends of the data blocks. See the attached
file for details. Download: http://www.digtrx.com

---Info credited to PY4ZBZ, on "WHAT'S NEW" with 1.53a:

<- The SPLIT function was improved, by the elimination of the filler
<symbols in the pieces, less in the last piece, that has a smaller size,
<what also contributes to the better total gain of the SPLIT function.
<The filler symbols are necessary in RDFT when the size of the
<file in bytes is not an exact multiple of the size of the block for the
<corresponding mode. The file is divided in blocks because RDFT uses the
<FEC method of Reed-Solomon block coding.
<The pieces without filler symbols have an exact multiple of blocks.
<(this new version 1.53a is compatible with 1.53, 1.52 and 1.52a)

(Additional Note: MMTTY Version 1.65b has been released recently.
Download at: http://www.qsl.net/mmhamsoft/)

802. DX-70 Repairs

Yahoo group: Temple_ARC
Date: 2004-07-21 22:47:30 UTC
From: KM5EW

Attachments: 1 described; binary payloads are missing from this source WARC

I have an Alinco DX-70 HF radio (10m-160m, opened up) that is in need of repair. Either the finals went out, or I may have burned out a diode or something. Anyway, I have a little recieve capability, but no transmit.

Since Alinco does not currently have an outlet for repair work here in the states, does anyone have any ideas as to how I should proceed? If I can't get this radio fixed, I may have to sell it for parts.

803. MT63 Version 2 (IZ8BLY) July 21, 2004

Yahoo group: Temple_ARC
Date: 2004-07-22 18:08:39 UTC
From: Charlie Schlieper
Topic: 803 Message: 803

Digital Mode Software Update:

MT63 Version 2, by IZ8BLY, was just released July 21, 2004.
(The older MT63 Version 1, by IZ8BLY, was dated May 1, 2001)
Download at: http://www.geocities.com/iz8bly/MT63/

Even slower computers can use this software by editing the
following three lines in the .INI file.

BlockLenMultiplier=1
WaterfallSlowDown=0
WaterfallEnable=on

Changing the first two to a higher number allows slower CPUs
to operate a little easier. Turning the WaterfallEnable to "off"
would be a last resort.

The new MT63 Version UPDATE file is named "MT63setup.zip"
without any Version indicator. You might want to rename it
"MT63setup2.zip" to distinguish it from the earlier version which
had the exact same name.

(Note: MT63 source code was developed by Pawel Jalocha, SP9VRC.
The Windows version of MT63 by Nino Porcino, IZ8BLY.)

804. Rename MT63 not necessary

Yahoo group: Temple_ARC
Date: 2004-07-22 18:28:16 UTC
From: Charlie Schlieper
Topic: 804 Message: 804

The download file of MT63 UPDATE is "MT63setup.zip" as compared
to "MT63setup.exe" of the earlier version. When unzipped, it becomes
MT63_v20_setup.exe which is very distinguishable from Version 1.

This was my oversight in my earlier UPDATE.

Topic: 327 Message: 807

Austin SwapNet 07/25/04 de N5MNW, ARO & AARC. Website: www.AustinHams.org

Spectral Explorers,

Rick (Lori's brother) and I helped Charlie KE5AY put a Mosely tribander up over the weekend. He's giving it a checkout just above the roof. It will be up at ~40 feet in the next week or so.

The following on BPL from Tim Lewallen, KD5ING-

I am one of the PIOs for the NTX section and over the last few days I have been emailing Roy Rabey, AD5KZ, the NTX SM and Ed Hare, W1RFI, Chairman of the ARRL Ad hoc BPL Working Group , concerning the formation of a BPL Team for Texas due to BPL coming to the Lone Star State..

The Ohio Section recently formed a similar team -

HYPERLINK "http://www.arrl.org/news/stories/2004/07/14/101/?nc=1"http://www.arrl.org/news/stories/2004/07/14/101/?nc=1

I have since discovered that similar activities have been happening in the STX and WTX Sections as well.

I propose that we may benefit by pooling our resources and forming a team for the entire state. By having members throughout the state working on this I think we will be in a better position to present our case on a state level should that need arise.

At the very least we should keep the other sections posted of our activities and related developments.

Sincerely,

Tim Lewallen, KD5ING

-NOTE- deadline to register for Decker Power Tour is ARES meeting July 27!!

AARC Aug 10- FIELD TRIP to Decker Power Plant!!!

Rick- KD5ABM has confirmed the Decker Power Plant tour. All attendees must complete the waiver form, available at the July and August AARC/ARO meetings and online. On the waiver everyone needs to enter their driver's license or TX ID number. Upon arrival at the power plant, everyone will be required to

show ID.

August 10th (the second Tuesday), members should arrive between 6:00 - 6:30PM Reggie Horton, the plant manager, will conduct and coordinate the tour. Based upon up to 35 people attending, two tours will be conducted simultaneously.

Let me know if you have any other questions. Thank you, Candice Scott 972-9532

(de KD5ABM) As you can see, they require advance counts and the completion of a waiver form. We need to be very specific about this tour. To attend, members must have the form done by the 27th and be at Decker at the right time.

Note that it will NOT be possible for people to jump in or tag along at the last minute.

73, Rick

ARO meeting Aug 3 at Marimont will be a discussion on Ham test equipment.

Rick Kirchhof KD5ABM will discuss what equipment you should consider for your shack and ideas on how to expand beyond the basics.

If you're not an ARRL member and are considering it, AARC/ARO will apply

$15 towards your AARC/ARO club dues if you sign up for first-time ARRL membership through the club! Take advantage of dual signup, save money, join ARRL and AARC/ARO simultaneously!

Contact John KG5O@... or Roger W5WIA@... for more details.

814. Ham Radio CLASS August 16th

Yahoo group: Temple_ARC
Date: 2004-07-30 18:07:21 UTC
From: Charlie Schlieper
Topic: 814 Message: 814

A summer Amateur Radio Class starts on Monday night, at 7PM, August
16, 2004. The location is at the Western Hills Church of Christ fellowship hall,
210 N. General Bruce Drive. This location is basically North-West of the IH-35
and Adams Street intersection, in Temple.

The basic beginner's TECHNICIAN CLASS will be offered, and if the demand
and resources are available, UPGADE classes for GENERAL and EXTRA.
You may also have an opportunity to learn the MORSE CODE, if desired.

The class is basically FREE, with only the cost being a study guide, which
is less than $20.00. For anyone 17 or under in age, the club will pick up
the cost of the study guide as well. You will meet twice a week-- on
Monday and Thursdays, at 7PM - 9PM, for six weeks.

If you have any family members, friends, or acquaintances desiring to get their
FCC amateur radio license, this would be an excellent opportunity! Register
by e-mailing Charlie Schlieper, n5td@... , or call (254) 773-0608.

From: Steve Bosshard (NU5D)
Topic: 816 Message: 816

I look forward to meeting you and visiting with your club about the Texas VHF-FM Society. I will be talking about my experiences as being a Society member for nearly 20 years and my experience on the Board of Directors for the past year. I will also be discussing that several of us "new" board members are working hard to make the Society a better organization. I will be talking about some of the new candidates Craig Green KV5E, Charles Staples WB5ZNV, and Tom Katopody N9TY, who are running for election to the Board of Directors on August 7th, in Austin, and how they share in improving the FM Society. I will also be asking for everyone's support to come down to Austin on August 7th and show their support. They can even sign up for membership in Austin on the 7th.

I also want to open up the floor for questions and answers, comments and suggestions, and if anyone has an ongoing issue, I want to know about it and I will look into it. I may not have all the answers, but I will do my best to get them.

Thank you for your time,

Kindest regards,

Chris Hudgins - N5IUF
Director - Texas VHF-FM Society

819. Contacts with ECHO Satellite AO-51

Yahoo group: Temple_ARC
Date: 2004-08-04 18:13:32 UTC
From: Charlie Schlieper
Topic: 819 Message: 819

I made my first four contacts via the new AMSAT ECHO Satellite, AO-51 this morning. The signals were great!

I worked: K7MT, in Helena, Montana
VE3NPC, in Ottawa, Canada
N1JEZ, in Burlington, Vermont
WD0EQP, in North Platte, Nebraska

Frequencies: 1268.700 MHz FM Uplink
435.300 MHz FM Downlink
PL Tone 67-Hertz

Be aware that the Doppler Shifts are quite different on 1268.700 MegaHertz, than they are on the received downlink frequency 435.300 MHz. Listed below are three "one-spot" comparisions between 145.920 MHz, 435.300 MHz, and 1268.700 MHz. These continue to vary during any pass.
145.920 Doppler Shift +3125 kHz
435.300 Doppler Shift +9318 kHz
1268.700 Doppler Shift +27160 kHz

It is evident that the Doppler Shift on 435MHz is approximately three times that of 2-meters, and 1.2 GHz is close to three times that of 435. Conventional transponders which are built into Satellite rigs seldom have the ability to program in "NON-LINEAR" TRANSPONDER TRACKING-- Normal or Reverse.

You could consider using one of two techniques to work a cross-band FM satellite like ECHO. You can SPOT the receive first (roughly centering it in reception), then select and TUNE your XMIT frequency--without changing the RECEIVE. That's one way. The Reverse Transponder Tracking will then function satisfactory, for a short time.

Another way is create about 9-preprogrammed Satellite channels, with non-linear Doppler Shift compensation. The frequencies are selected to function at different times during a typical pass. Remember that these channels could also still be used with the rig's Reverse Satellite Tracking mode---tuning the two frequencies in opposite direction. Programming 9 or so channels is just another way of introducing non-linear tracking to an existing rig which was designed for linear tracking. My comments? I think probably the "Spot-and-Tune" method would be a lot easier for most people.

Enjoy Ham Radio!

820. Re: [Temple_ARC] Contacts with ECHO Satellite AO-51

Yahoo group: Temple_ARC

Frequencies: 1268.700 MHz FM Uplink
435.300 MHz FM Downlink
PL Tone 67-Hertz

i've not worked a satellite since 1986 and i've never worked one on 1296. i remember seeing something recently about a lauch, so this must be it.

what are you using for antennas and how much power on 1296? the pl tone is interesting. is this satellite channelized? i'm trying to imagine how a pl tone would work otherwise with a transponder?

73, john

W5TSG EMERGENCY RELAY NET SCHEDULE

Wednesday 7:30 p.m.

COUNTY REPEATER FREQUENCIES

If for some reason a net is not held on a frequency listed below for your county, please check into whatever repeater you can reach.

Bell: 147.140

Bosque: 147.180

Coryell: 147.180

Hamilton: 147.180

Hill and surrounding area: 146.780

Johnson County: 145.490 (net discontinued thru summer but on call for any emergency)

Limestone and surrounding area: 145.390 (presently holding net last Wednesday of the month simplex only 146.550)

McLennan County 147.320

Williamson and surrounding areas: 146.90 (not available at this time)

8:00 P.M. W5TSG Traffic and Training Net 147.240

THURSDAY 7:00 p.m. TXSG 3972 HF 80 meter net ......everyone with HF privileges is invited to check in

829. Working AO-51 & AO-27 Sats

Yahoo group: Temple_ARC
Date: 2004-08-09 01:01:45 UTC
From: Charlie Schlieper
Topic: 829 Message: 829

Working AO-51 & AO-27 Sats with a

Dual-Band 2m/440 Radio

By programming multiple channels into an ordinary "non-satellite" radio, you can work the LEO Satellites which operate in the Cross-Band, Mode-J, FM. The dual-band radio must be capable of full-duplex.

AO-27

Chan # Receive Freq Transmit Freq

1 436.804 MHz 145.847 MHz

2 436.800 MHz 145.8483 MHz

3 (Cntr) 436.795 MHz 145.850 MHz

4 436.790 MHz 145.8516 MHz

5 436.786 MHz 145.853 MHz

AO-51

Chan # Receive Freq Transmit Freq

1 435.309 MHz 145.917 MHz

2 435.305 MHz 145.9183 MHz

3 (Cntr) 435.300 MHz 145.920 MHz

4 435.295 MHz 145.9217 MHz

5 435.291 MHz 145.923 MHz

Note: In both Charts, five combinations of frequencies were chosen, taking into account approximately +90%, +50%, Zero, -50%, and -90% Doppler Shift for both Bands. With a little practice, it should be easy to learn when to switch channels, keeping well within the Doppler Shift window of tolerance. For radios which cannot be programmed less than 5-kHz steps, round off to the nearest frequency obtainable. The use of headphones for the receive audio will prevent acoustical feedback. While Circularly Polarized antennas are optimal for most satellite work, many other types are acceptable.

From: Carolyn Black
Topic: 544 Message: 836

To all hams in Central Texas:
As most of you know, the W5TSG repeater is now operating at a 420 ft tower located in Watt. We are interested in the footprint of the repeater and need the assistance of each local club and hams in the area.

On Weds, 11 August , we're asking as many of you as possible to check in on the TSGARC training net on 147.32 123 tone starting at 8:00 pm. Please let us know who you are and your location. This will assist us in constructing a realistic map indicating the footprint of the repeater. We will acknowledge in groups of four and move as fast as possible. Our training portion will be at the end to facilitate this endeavor.

This repeater will add to the already effective repeaters located in and around our area. Most importantly, it is there for your use whether it be for a chat or an emergency that can't be facilitated by other repeaters in the area.

We also invite all the other clubs in the area to consider this for your back up repeater for those "bad days" we all experience when our repeater decides to take an untimely "vacation".

If you have any questions please contact me at k5zzm@... or call at 254-754-7513 Toll free 888-204-9909.

73's, Leon K5zzm, President TSGARC

Topic: 839 Message: 839

I wanted to share this message about Satellites in Amateur Radio, even though I know the number of Hams who work satellites are few. It is my hope that others will discover this exciting facet of the hobby, and venture into a most exciting experience of communicating via satellites.

a.. > As Art, KC6UQH said, "There are approximately 700,000 Radio
b.. > Amateurs in the US. Less that half are active, and less than 10 %
c.. > of those who are active, work Satellites."
The next section is from Mike Seguin, N1JEZ, a local area coordinator for AMSAT.

> The first AO-51 "Experimenter's Wednesday" took place on 08/04/2004.

> The satellite was configured for L/u voice. For those of you who may have

> missed the first pass, Patrick, KA9SCF recorded it and has an mp3 at:
> http://www.warpcore.com/AO-51-20040804-0227.mp3
>
> Based on information supplied by 13 of the satellite operators who worked
> L/u, I've extrapolated what I feel is a good starting point for those
> interested in trying the L Band uplink. This is based purely on my own

> experiences working other L Band stations and reviewing data sent by other
> successful users.
>
> EIRP is a combination of rig power output, coax losses, and antenna gain.
> You'll want to make some basic calculations to arrive at your EIRP. Here are
> a couple of URL's that may help. The first is for loss for various types of
> coax at 1269 MHz.
>
> http://www.ocarc.ca/coax.htm
>
> Once you know your rig power out, coax loss and antenna gain plug them in
> here:
>
> http://www.csgnetwork.com/antennaecalc.html
>
> First I'd like to thank the following for sending data on their systems:
> CT1EAT, G3VZV, G3WDG, IZ1ERR, KE4AZN, N5TD, N8MH, NA2P,
> VE3NPC, VE7BPB, W2XB and WA1ECF.
>
> Based on data from the above, I'd like to recommend users consider putting
> together the following L Band systems to be used on L/u Voice:
>
> For an occasional contact, 150 watts EIRP.

> 2.) Doppler can run as high as +/- 28 kHz. You must tune your uplink to compensate.

> 3.) The satellite L Band antenna--- Of the 13 users surveyed, 5 used linear and 8 had circular antennas.

> Here is a picture of the dual band L/S receive antenna designed by Stan Wood, WA4NFY. It is essentially a ¼-wave design. For size perspective, it is built on an SMA connector.
> http://members.aol.com/mike73/images/ls.jpg
>
> 4.) As you reduce uplink power, Doppler correction and antenna pointing
> accuracy become more important. I was able to hold the L uplink with a mere
> 50 watts EIRP, BUT only after I had fine tuned my antenna and carefully
> adjusted Doppler for the center of the receiver capture window. Mark, N8MH
> was using about 170 watts EIRPc and we did make a contact. There was a bit
> of white noise on his signal, but he was quite readable.

> 5.) At the 500 watt EIRP level, #4 is still important but it is much less
> severe. Operation is pretty easy. An interesting observation was made by
> Clare, VE3NPC. He runs 500 watts EIRPc. He was experiencing drop outs
as he talked. When his FM deviation was reduced, it seemed to clear up the
> problem. This was a very limited test, so more work needs to be done here to
> see if this is a factor or not. I have seen this effect on marginal signals
> into FM repeaters where an operator will be dropping out. He is then told to
> back off his mic and he'll then hold the repeater.
>
> 6.) At the 1 kW and above level, operation becomes very easy. There still is
> the need for Doppler correction, but the window is easily +/- 5 kHz.
>
> 7.) An HT with 5 kHz steps could perhaps work, but if the EIRP is small, it
> might tend to be spotty unless Doppler were close to a 5 kHz step.
> Unfortunately, I'm not aware of anyone making contact with an HT this time
> around. The best I could do was test the effects of using lower power. It
> _did_ work! Who will make the first L/u contact with an HT and small beam on
> the uplink?

Technical Information for Mode-L: (at N5TD)
Uplink Antennas: Pair of 1.2-24LBX Yagis
Downlink Antenna: 435-40CX CP Yagi
Transmit Power: 68-watts Output at 1268.700 MHz
Coax Loss: 1.7 dB using short run of HELIAX
EIRP: 6 kW, Mode-L
Receive: GAASFET pre-amp on 435.300 MHz.

FAX: (775) 264-1978
E-mail: hamexpo@...

August 17, 2004

FOR IMMEDIATE RELEASE

Temple Amateur Radio Club's
Ham Expo Is October 2, 2004

Ham Expo, the twice-yearly Amateur Radio swapfest sponsored by the Temple (TX) Amateur Radio Club, will take place Saturday, October 2, 2004. It will be held at the Bell County Expo Center in Belton, Texas. The doors open at 7:00 a.m., and the event ends at 3:00 p.m. Admission is $1.00 per person.

The Bell County Expo Center is at 301 W. Loop 121 in Belton, Texas. From Interstate-35 take Exit 292. Go west on Loop 121 for 1/4 mile to the Dome.

Ham operators can get directions by radio on the talk-in frequency of 146.820- (PL 123.0).

Amateur Radio operators, shortwave listeners, computer hobbyists, and other electronics enthusiasts are attracted to Ham Expo from across the South, Southwest, and beyond. Admission is $1.00 per person. Parking lot tailgaters will be asked to contribute a $5.00 donation. Indoor tailgaters will purchase spaces at $10.00 to $25.00 each based on set-up times.

This swapfest will feature more than 30 commercial vendors from Texas, Louisiana, Oklahoma, Missouri, Mississippi, and elsewhere. The 2,000 attendees will look for bargains on communications gear and accessories, according to Mike LeFan, WA5EQQ, event chairman.

A flea market will include individuals with "pre-owned" electronic items for sale at Ham Expo. The event's group of commercial dealers will showcase the newest Amateur Radio equipment, scanner radios, computers, computer accessories, batteries for all forms of electronics, cables and connectors, and other accessories.

About 200 individuals will be selling their own surplus electronics bargains inside the Expo Center's large arena area, as well as on the parking lot outside.

Exams for all classes of Amateur Radio licenses will be administered onsite at 1:00 p.m. The cost is $12.00 per exam. Information on the location will be available at the registration desk.

Many attendees make a weekend of Ham Expo, arriving on Friday in RVs and camping on the parking lot to enjoy a weekend tailgate party with both old and new friends.

Ham Expo is accessible to persons with handicaps. Dozens of door prizes will be given away. More information is available on the Internet at www.tarc.org for those with Internet access. You may send e-mail to expo@... or telephone Mike LeFan, WA5EQQ at (254) 773-3590 (10:00 a.m. - 9:00 p.m. Central Time, Monday-Saturday. Answering machine picks up after 6 rings).

842. Cal Howerton / N5GSL

Yahoo group: Temple_ARC
Date: 2004-08-12 20:15:19 UTC
From: Carolyn Black

From Rene' Miller, KD5NEV rene924@...

Hello Fellow HAMS !!!

A very special person to all of us, Cal Howerton / N5GSL will be celebrating his birthday on Monday, August 16, 2004. I thought it would be great if we all gathered on the 147.320 on Monday, August 16, 2004 at 6:00 p.m. to wish Cal a HAPPY BIRTHDAY. The plan is, I will contact Cal via telephone and ask him to get on the frequency for me for a radio check and once I make contact with him on the air, then those who are there waiting can wish Cal a Happy Birthday. This is something I would like for all who can to do this and SURPRISE Cal on his birthday. Cal has been there in the mornings and late afternoons to talk with us on the drive to/from home, work, school, etc. and I think it would be great to do this for him on his birthday.

Looking forward to hearing ya'll on the air on 08/16/04 at 6:00 p.m. on the 147.320 to wish Cal Birthday Wishes!

God Bless!!!!

849. New Digital Mode - HAMDREAM24

Yahoo group: Temple_ARC
Date: 2004-08-25 20:33:47 UTC
From: Charlie Schlieper
Topic: 849 Message: 849

First CONTACT with Hamdream Version 2.4!

I just made my first contact using HAMDREAM, on 14.255 KHz, USB,
with Mel, K0PFX, in St. Louis, MO.

Hamdream is a digital transfer mode for both data and voice, and
was modified for Ham Radio use by HB9TLK. It comes from an
open source software implementation of a DRM receiver under the
GNU General Public License (GPL), from the Darmstadt University
of Technology. (Institute for Communications Technology)

DREAM is Digital Software for both VOICE and DATA, and has
some similarity to the ARD9800 units, but DREAM does it all with
computer software and a sound-card.

Some reference site URLs are:
www.qsl.net/py4zbz
www.qslnet.de/member/hb9tlk/
www.tu-darmstadt.de/fb/et/uet/fguet/mitarbeiter/vf/DRM/documentation.html

> computer software and a sound-card.

If I understood correctly, conditions had to be pretty good for the
ARD9800's to function. How does DREAM compare?

73, John

853. Windos Xp SP2 Upgrade

Yahoo group: Temple_ARC
Date: 2004-08-27 15:09:26 UTC
From: Anthony Mikulastik
Topic: 853 Message: 853

I made a Ghost Image of my hard drive in case I did not like what the Service Pack 2 did to my Windows Xp Pro. The down load is huge, about 100 megabytes! The down load went fine on my DSL connection (1.3 meg ave. speed). Restarted the computer and the only difference I see is there is security control panel that came up the first time Xp started. When you start a few programs a one time install occurs. The built in fire wall does not seem to interfere with anything I do with the computer. If I notice anything negative I will update and give details.

If you do not have a Broad Band Connection SP2 is available on CD.

856. KE5C's new Motorcycle!!!!

Yahoo group: Temple_ARC
Date: 2004-08-28 19:00:57 UTC
From: Anthony Mikulastik
Topic: 856 Message: 856

Get the women and children off the streets!

Yes that is John, KE5C zooming around town on the shinny new Harley Davidson motorcycle. Two whip aerials, no coon tail yet! It has a beautiful dark burgundy paint job. It has the deep sound of a HD. It is a major touring bike to say the least. Must have accessories to come are ham rig and XM sat radio. Take note of the copilot seat, first class. Stereo FM/CD and CB built in. John's new motorcycle is very similar to the HDs the Temple Police Department uses, only much nicer.

John if you go HF motorcycle mobile I have the antenna for you! The Hi-Q XLT would even be a good color match. Hi Hi

John is on the road again.

Yea Haw!

857. SP2

Yahoo group: Temple_ARC
Date: 2004-08-29 14:17:02 UTC
From: Glenn.Blum
Topic: 857 Message: 857

Good Morning,
Friday night I had downloaded SP2 for windows XP and was not too bad at 77.1 Meg of download and on dial up only took me 2 hours and 50 minutes to get. So far the only problem I have that I can't get on the internet or receive email with zone alarm fire wall up and running and that is with the security settings set to zone alarm. So right now until I could figure it out I have to disable zone alarm.
Anyone else having this problem?

Thanks,
Glenn

From: Steve
Topic: 857 Message: 860

When you install the upgrade it asks you if you want to use your existing firewall or the Microsoft firewall. I think zone alarm is free and MS may not recognize it. I would try going in and turning off the MS firewall in the My Network Places section for your connection under advanced. FYI, the full download is 260+mb. Fortunately MS analyzes your system and only installs the files you need.

Steve,

861. New ham needs advice on first radio

Yahoo group: Temple_ARC
Date: 2004-08-31 17:25:04 UTC
From: p3epilog
Topic: 861 Message: 861

I passed my Tech exam on 26 August and am researching radios while I wait for my call sign to show up on the FCC site. I have decided that I want a handheld (after considering mobiles and bases and weighing the options of each against each other). This is primarily because of the portability that HTs offer. I can live with the lower output power since I am located in the middle of a metropolitan area (DFW).

I value the opinions and experiences of other hams, so I would like to solicit advice on a good HT. I am open to getting one that's used, so there is no need for anyone not to respond because the radio they like is no longer manufactured. If I can find it used, that's great.

Here are my parameters: My budget is $200, I want at least 5W output, and I am interested in working 2m and 440 bands.

Thanks for your help. I look forward to hearing from many of you!

Andy Entrekin
Bedford TX USA

864. Suspension of the LSSN Nets

Yahoo group: Temple_ARC
Date: 2004-08-31 23:12:17 UTC
From: Warren Rowe
Topic: 864 Message: 864

At this time, I am announcing that the LSSN Weekly Nets will be suspended temporarily. Due to some newly-announced changes and some unforeseen events, we will not hold the nets for likely around one month.

After the changes are in place and the events are handled internally, we will then resume the weekly nets. LSSN will announce when the will resume.

For those who had been monitoring the nets, thank you for listening in and checking in when you can. If you have any questions, please contact me.

From: Terry Hashman
Topic: 867 Message: 867

Hi Folks,

The year has gone by so fast... I have already enjoyed my upgraded ticket and want to tell anyone thinking about upgrading that ITS GREAT ! I have made 20 meter contact with 4 of the hams in Bell county to include W5WRE & N5OCX.. and have heard several others.

Anyway with the new ticket I need more antennas :-) Sooooo check out the progress on the 2nd tower at ARS KC5EGC...

www.KC5EGC.net/tower.html

Thanks to all the ELMERS in T.A.R.C. for the help and info along the way during the 10 years I was there in Texas as a no-code tech..

A very special thanks to Mr. Charlie Schlieper N5TD for his patience and many many hours of helping alot of us with the many digital modes we used before I moved !!! T H A N K S C H A R L I E !!

"LETS ALL PROMOTE OUR HOBBY !!!"

Hope to hear ya on H.F.

<http://enews.primediabusiness.com/enews/mobileradiotech/mrt_bulletin/2004_september_3_september/amateur_radio_operators/graphic> Amateur radio operators shine in crises
By Glenn Bischoff
September 3, 2004

It's common -- almost startlingly so -- to hear about total strangers banding together in times of crisis. For some unclear reason, basic human instincts governing compassion and charity that usually are suppressed by the dog-eat-dog world in which we live are unleashed when disaster strikes, and people who normally wouldn't even acknowledge each other's presence stand shoulder-to-shoulder to help those less fortunate, and often each other.

Such a scenario is playing out in Mobile, Ala., as Hurricane Frances bears down on the state of Florida. As you read this, a cadre of amateur radio operators are providing whatever assistance they can to those affected by the storm.

They are plying their craft at WLO Radio, the nation's sole provider of high-frequency ship-to-shore radiotelephone service, which it has been doing since 1948. WLO makes space available to an amateur radio club known as the Maritime Mobile Service Network (www.mmsn.org), which consists of 68 members who voluntarily monitor the 14.300 kHz band on a rotating basis from noon to 10 p.m. eastern time. The club was formed in 1968 by Navy Chaplain A.W. Robertson to handle phone-patch traffic during the Vietnam War and today still handles third-party traffic for military personnel stationed overseas, according to Rene Stiegler, co-owner of WLO.

When an event such as a major hurricane occurs, the club is "deluged with requests for information," Stiegler said. "It's usually ships at sea that are looking for the latest hurricane advisories and long-range forecasts."

Should one of the volunteers pick up a distress call, he or she connects the call via a phone patch to the U.S. Coast Guard; they also provide location information. "That frequency definitely has become a calling frequency for help, especially for vessels at sea," Stiegler said.

The service provided by the club is especially critical for smaller ships (under 300 gross tons), which are not required to have on board the Global Maritime Distress and Safety System. Those vessels generally place mayday calls over the 2182 kHz frequency monitored by the Coast Guard, but propagation challenges limit the effective range of those signals to 200 miles, Stiegler said. Ships beyond range of a Coast Guard receiving station then revert to the 14.300 kHz frequency, he added.

Stiegler said the club occasionally receives a distress call from larger commercial ships on that frequency, something he's not sure FCC rules allow. In times of trouble, that becomes a moot question, however.

"If you're out on a boat that's sinking, we're not going to turn you away."

875. SATERN Net Activating for Hurricane Frances

Yahoo group: Temple_ARC
Date: 2004-09-04 05:40:27 UTC
From: KM5EW
Topic: 875 Message: 875
Attachments: 2 described; binary payloads are missing from this source WARC

Beginning September 4 at 1400 UTC, SATERN, the Salvation Army Team Emergency Radio Network, will activate on 14.265 MHz. SATERN will handle emergency and health-and-welfare traffic for those attempting to get news of relatives and friends in the areas that may or will be affected by Hurricane Frances.

SATERN will also accept specific health-and-welfare traffic on its Website at the following URL:

http://www.satern.org/

For those that use CW, a fairly new all-CW entity, the National Radio Emergency Net (NREN), activated on September 3 in response to Hurricane Frances to monitor 14.050 and 7.050 MHz for emergency and health-and-welfare traffic as well as hurricane information throughout the weekend. NREN is geared to low-power, portable, and mobile stations.

Thanks to the ARRL for providing this information to its mailing list.

I found something to plug in those small power transformers without taking up all the outlets in the house. I got mine at Lowes.

It also gives you 5 outlets on an extension cord. It looks to be heavy duty and is intended for use on construction sites.

73,

Anthony Mikulastik

888. Re: Cellular towers and RF

Yahoo group: Temple_ARC
Date: 2004-09-13 02:27:39 UTC
From: Ron
Topic: 887 Message: 888

I know this is directly related to amateur radio, but am looking for data re RF output from cellular phone sites. When in the US, there was considerable discussion re this topic. I now reside in the Philippines and recently there has been newspaper articles re inherent dangers of RF emission from said sites. None of the stories have provided supporting data, only emotional suggestions of physical damage.

Can anyone point me to research providing information on medical concerns from RF emissions generated by cellular sites?

Thanks,

Ron Nethercutt,

902. Software Update - HamDream

Yahoo group: Temple_ARC
Date: 2004-09-25 19:39:43 UTC
From: Charlie Schlieper
Topic: 902 Message: 902

Ham Radio Software Update:

A new experimental version of HamDream V3.1 is available now.
It has reduced the number of digital carriers to 51, changed the
frequency pilot and timing position, some SDC data was removed,
and the FAC data now includes a callsign. This version complies
to mode B of DRM standard, in guard interval. Version 3.1 has
faster sync-- since the frame time is now 400mS rather than
800mS.

904. Second NOTE - HamDream V3.1

Yahoo group: Temple_ARC
Date: 2004-09-27 04:46:47 UTC
From: Charlie Schlieper
Topic: 904 Message: 904

In my original send of "Ham Radio Software Update," I included
a complete URL-- which existed on my screen, but I've discovered
that you will need to back off on the last part, "beta.htm," to make
it work. (Bob, K5AOK, and I, have done some successful testing
with HamDream V3.1. This is a digital file transfer program for
Ham Radio.)

A new experimental version of HamDream V3.1 is available now.
It has reduced the number of digital carriers to 51, changed the
frequency pilot and timing position, some SDC data was removed,
and the FAC data now includes a callsign. This version complies
to mode B of DRM standard, in guard interval. Version 3.1 has
faster sync-- since the frame time is now 400mS rather than
800mS.

Original URL was listed as: http://www.gslnet.de/member/hb9tlk/beta.htm
Please try this one: < http://www.qslnet.de/member/hb9tlk/ >
Then go down on the page until you see the LINK for the BETA V3.1

If this is an UPGRADE, then you already have the two files that make
V3.1 work; otherwise, you will need to download these files:
1.) FreeImage.dll
2.) qt-mt230nc.dll
(Note: The zip files to download are "freeimage.zip" and qt-mt230nc.zip)

906. Bizaare Occurance

Yahoo group: Temple_ARC
Date: 2004-09-29 04:26:30 UTC
From: Charlie Schlieper
Topic: 906 Message: 906
Attachments: 1 described; binary payloads are missing from this source WARC

One of the most bizaare things happened to me today while
I was outside refilling my bird feeder. A small bird flew by my
head several times. At first thought it was a hummer. Then,
on one pass he came so close to my right ear that I could see
he was too large to be a hummer. I put my right hand up to
the side of my face, with my palm toward the sky. At that
moment, he landed in my hand! I talked to him for about five
minutes, and he responded back with high-pitched CHEEPS!
(I figure my conversation was at least long enough to qualify
me for any psyche ward worth it's salt.) The bird then flew over
into my neighbors yard, and landed on his shoulder. At that
time I ran to get a camera. This is the one picture I was able
to take of the "Little Wild Bird."

To: TSGARC Members and supporters
From Leon K5zzm k5zzm@...

The W5TSG repeater, 147.320, was hit by lightening this weekend and virtually knocked us out. We have repairs in progress in terms of replacing the controller and possibly other instruments affected by the hit. In the meantime, please switch to the 147.24 as the primary repeater until further notice. Thanks for your patience
Leon, k5zzm

913. Slo-Scan format change

Yahoo group: Temple_ARC
Date: 2004-10-05 04:36:27 UTC
From: Carolyn Black
Topic: 913 Message: 913

From: Leon, K5zzm, k5zzm@...

Effective this date, we are changing the Slo-Scan/ATV format. Starting this Tuesday, October 5, and every Tuesday, we will feature a tech subject about digital photography on the Slo-Scan net, 9:00 p.m. These subjects will be featured at the beginning of the net so everyone can enjoy some great ideas and techniques from those who have had experience. This means each and every one of you have some input. It is our hope that you will share those with us.
Also check in on the ATV net on 147.24 at 8:30 p.m. even though you may not be able to monitor now. Your input will be just as important on 2m voice.
Come and help make this all work. Also learn all the neat stuff about these new digital cameras, both still and video. How about video or still editing ? You bet there will be questions and answers every Tuesday evening...just check in and let's have a super discussion.

Topic: 920 Message: 920

Hi Coy!

Thanks for visiting the Temple Amateur Radio Club last night. I've yet to talk to someone who didn't enjoy your talk (but they may be out there somewhere). I couldn't agree more with the question raised, however, why does the ARRL worry about getting new members but then charge $99 for the on-line technician course???

http://www.arrl.org/cce/Tech.html

The two-courses per month cycle also seems a significant impediment. Why is this necessary? What if I am interested NOW? Out of curiosity, do you have any idea how many courses have been sold, and how many new hams have resulted?

If the ARRL really wants to facilitate entry into amateur radio, the ARRL should offer a FREE, SELF-PACED on-line license course. Every Boy Scout leader, junior or senior high school science teacher, etc. should receive a notification about the availability of such a free, self-paced course. Thanks for your consideration.

73, John Dvoracek

925. GIF File Problem - DIGTRX200

Yahoo group: Temple_ARC
Date: 2004-10-12 22:20:48 UTC
From: Charlie Schlieper
Topic: 925 Message: 925

Digtrx 2.00 was released October 7, 2004.
After testing this new UPGRADE, I reported two 'bugs'
to Roland Zurmely. I have now confirmed that the main
problem when sending GIF files has been widely reported
by Digtrx users.

Digtrx Version 2.00 has several bugs, but the one that is
most prominent is: the WATERFALL FREEZES up when
sending GIF files. (The program often locks up)

As helpful information to Digtrx users, you may want to
remain using Digtrx Ver 1.57 until this problem gets fixed.

934. More on JOTA in Harker Heights

Yahoo group: Temple_ARC
Date: 2004-10-14 21:11:30 UTC
From: Ed Underwood
Topic: 934 Message: 934

TARC,

As mentioned earlier, the scout JOTA activity will be this Saturday afternoon, Oct 16 in the eastern edge of Harker Heights from 3:30 to 5:30. Last year TARC provided two portable stations, one on 20 M and one on 40 M, and we plan to do at least as much this time. This is an excellent to present our wonderful hobby to a bunch of youngsters, who are about the age I was when I got my ham ticket, thanks largely to my helpful and patient Elmer. First of all, to find out more about JOTA in general, you are referred to: http://www.arrl.org/FandES/ead/jota.html

Last year's TARC representatives there were Charlie, Steve, Martha, and Ed. They expect about 40 scouts plus their leaders to be camping out at the park. If you can make it there, please email me for more details.

Thanks and 73,

Ed W5LQ

935. looking for 2m beam

Yahoo group: Temple_ARC
Date: 2004-10-14 22:57:36 UTC
From: James
Topic: 935 Message: 935

I'm setting up a 40 ft tower, and need a 2m beam to finish it off

No more that 13 element and no less than 10 elements

So a 13b2 would be ok

Or the 10 element

Or the old 11 element from Cushcraft.

IF YOU HAVE ONE FOR SALE OR WILLING TO THINK ABOUT IT.

Thanks Jim

W5SSG

938. Directions for JOTA park

Yahoo group: Temple_ARC
Date: 2004-10-15 21:24:27 UTC
From: Ed Underwood
Topic: 938 Message: 938

TARC JOTA participants,

I did not see any signs for the park in Harker Heights, so these are simple directions:
a.. From Belton area, go west on Hwy 190.
b.. When entering (or approaching) Harker Heights, take the exit to the right for Business 190.
c.. Continue westward on Business 190 for roughly 3/4 mile, just past VFW.
d.. At the highway blinker light, turn right (north) on road 3219 (may also be called Lookout Ridge Blvd).
e.. Proceed north about 1/2 mile to about 50 feet before the railroad track.
f.. Turn left on the dirt road into the park and drive a few hundred yards to the site.
The scouts will be camping in a heavily treed area, and there is a reasonably cleared area suitable for our stations. Tables and 115 VAC power are available. For horizontal wire antennas, there are suitable trees scattered around the display area. Also there is a flag pole which would make a good support for one end of the antennas. It must be shared with the flag, of course.

Ed W5LQ

939. JOTA

The TARC was well represented at the October 16 Jamboree On The Air held in Harker Heights. Ed (W5LQ) and Martha (NU5R) Underwood organized the Ham Radio portion of the Jamboree Camperee event and set up a portable station on 20 Meters. Jim Kennedy (W5SSG) set up an APRS demo station, and John Hobson (WB5BSF) and Steve Bosshard (NU5D) set up a 40 M portable station. W5LM Trustee, Ron Thompson (W5WRE) observed proper operating procedures on the club stations, and also operated a 2 Meter station. There were around 40 cub scouts present and 20 some odd were able to operate the different radio stations and make some contacts. Charles Culver (WB5NGV) and John and Emily Dvoracek (KE5C) also participated. TARC Members encouraged the young scouts to learn more about ham radio and spoke about ham radio classes offered by TARC. Special thanks to Del Phranger (W0DRO) in Bracketville, and Kelly Spencer (KD5SPO) in Marshall, for being on the air to visit with the scouts. TARC Member Tommie Taylor, WD9HNB and Harold Bates, KB5SXV also manned the Western front with a JOTA Station in Lampasas with VHF / UHF and Echo Link connections.

943. Austin Swap Net

Yahoo group: Temple_ARC
Date: 2004-10-18 16:23:41 UTC
From: Steve Bosshard
Topic: 327 Message: 943

Austin SwapNet 10/17/04 de N5MNW, ARO & AARC. Website:
www.AustinHams.org

Emergency Simulators,
Williamson Co ARES held a low-stress SET on Saturday. VHF repeater
simplex and
mobile HF coverage between the various towns was explored, as well as
Winlink2000. See the report:
www.wcarc.com/newsletters/_newsletter-index.html

MSET did a superb job covering the Lance Armstrong "Ride for the
Roses" this past
Sunday. Lots of activity was heard on the repeaters in support of ride
issues.
Thanks to the MSET volunteers that made it all happen.

Kevin AD5RA reports the UTARC entertained some scouts for JOTA
(Jamboree On The
Air). They toured the UT station and made contact with a scout troop in
Tennessee.

TCARES SET coming up Saturday Oct 23. VHF voice, packet and HF mobile
between
the Bastrop Travis and Highland Lakes will be exercised. Williamson Co.
is invited
as well, but we understand if recent exercises have been enough :o)
Contact Jim AB5EK 327-6184 or hamradioexams@....

Lori- KM5MQ, requests all who are planning to attend the Radio RoundUp

banquet dinner/party and the next day's swapmeet to register on the
website! We need to know fairly accurately how many we are going to
feed. 110 attended
the banquet last year and it was a lot of fun.
www.austinhams.org/swapfest.html
Of course, you may also simply call or email your reservations.

WCARC will be conducting a Technician class beginning on October 23
going
through November 13. The classes will start at 8:30am and go through
11:00am.
The location is to be at the Round Rock Central Fire Station. The text
will be,
'Now You're Talking - 5th Edition.' www.wcarc.com
Contact Dallas KD4HNX mylastname@yahoo.com or Greg AG5W@...

If you're not an ARRL member and are considering it, AARC/ARO will
apply
$15 towards your AARC/ARO club dues if you sign up for first-time
ARRL membership through the club! Take advantage of dual signup, save
money,
join ARRL and AARC/ARO simultaneously!

Topic: 945 Message: 945

Hello Temple ARC finally got my rotor in,

The tower I have to raise is two (2) sections and a top section. Total of 28 feet of tower + install 1 rotor and 3 antennas (HF 3 element beam JR size, 6m beam , 2m beam) all put together.

Total time for the job is about 3 hours.

I hope this is enough notification time.

I would like to do this on Sat 23rd at 2pm or early but no than 10 am

For those that would like to help please send me a e-mail

I'll fire the grill up and do a little cooking burgers and stuff

Don't need more than 4 to 5 helpers , I will do all the climbing , but I will need someone to stand on the roof and pull ropes

After talking with Steve (NU5D) he told me the club has a gin pole , I need the location so I can pick it up.

73's

Hope to hear from you

Jim

Subject: [Temple_ARC] JOTA

The TARC was well represented at the October 16 Jamboree On The Air held in Harker Heights. Ed (W5LQ) and Martha (NU5R) Underwood organized the Ham Radio portion of the Jamboree Camperee event and set up a portable station on 20 Meters. Jim Kennedy (W5SSG) set up an APRS demo station, and John Hobson (WB5BSF) and Steve Bosshard (NU5D) set up a 40 M portable station. W5LM Trustee, Ron Thompson (W5WRE) observed proper operating procedures on the club stations, and also operated a 2 Meter station. There were around 40 cub scouts present and 20 some odd were able to operate the different radio stations and make some contacts. Charles Culver (WB5NGV) and John and Emily Dvoracek (KE5C) also participated. TARC Members encouraged the young scouts to learn more about ham radio and spoke about ham radio classes offered by TARC. Special thanks to Del Phranger (W0DRO) in Bracketville, and Kelly Spencer (KD5SPO) in Marshall, for being on the air to visit with the scouts. TARC Member Tommie Taylor, WD9HNB and Harold Bates, KB5SXV also manned the Western front with a JOTA Station in Lampasas with VHF / UHF and Echo Link connections.

948. FW: [PWF] BPL - preparation (establishing a baseline)

Yahoo group: Temple_ARC
Date: 2004-10-21 07:20:04 UTC
From: Steve Bosshard (NU5D)
Topic: 948 Message: 948

From: jsobecke [mailto:jsobecke@...]
Sent: Wednesday, October 20, 2004 9:50 AM
To: PrivateWirelessForum@yahoogroups.com
Subject: [PWF] BPL - preparation (establishing a baseline)

As a new member to the group -

I would propose that those really concerned about the eventual effects of BPL do a little preparation NOW.

Why not use your spectrum analyzer to document the spectrum (i.e., ambient noise, adjacent channel signal strengths, etc.)to establish a baseline for ambient noise TODAY - and then repeat it every 6 months or so. Document the location, equipment set-up, etc., and have someone certify or at least witness the process and resulting data. The time of day would probably be critical.

If and when BPL becomes available in your area you would then have a documented resource of what the ambient noise was before and compare with what it is now. This information could certainly help justify a complaint.

Question: Does anyone with LMR or other remote sites conduct on-site spectrum analysis as a matter of record during annual scheduled maintenance?

In a previous job I had advocated the conduct of a site spectrum analysis (3-30, 30-150, ... 5 GHz)for "contingency relocation sites" to determine what rf activity was present and then use that information to analyze the potential impact (interference to and from others, etc.)of the introduction of multiple radio transmitters (government bands). The concept was accepted and support, but the implementation had too many 'security concerns'. Management thought it could be accomplished from the back seat of a sedan during a drive by! But that was then .....

952. AM-COM ASAC-100 cable for IC-706MKIIG

Yahoo group: Temple_ARC
Date: 2004-10-25 23:41:24 UTC
From: Bill Mossman
Topic: 952 Message: 952

Does anyone out there have an extra cable to go between the AM-COM ASAC-100 screwdriver antenna controller and an IC-706MKIIG or the schematic diagram for that cable? Apparently AM-COM is out of business as their web site is gone and their phone number has been changed to a non-working number. I would appreciate any help that anyone can provide.

Jim and Fellow TARC Members. Please accept my most humble apologies about the lack of notice of the appreciation breakfast. I did make the announcement at the last club meeting, but there was some confusion because the date in the note that I read from was not correct. I should have made sure this was in the bulletin and sent on the reflector, but I did not do so.

My regrets,

Steve

Topic: 967 Message: 967

Congratulations to TARC for a second-place finish in the North Texas Section during Field Day 2004:

http://www.tarc.org/fd04/scores04.html !

This would not have happened without the club members who came out and got all wet, muddy and those who even gave up a night's sleep. Yet, it was all fun and now a sense of accomplishment can be felt.

The scarey thought is, with a few more bonuses, TARC would have been number one. Don't worry about that next year, however, since I am sure everyone else will respond to TARC's effort by increasing their own. I just hope we can prevail upon the chairman to run the show again next year!

Subject: Nov 6th- Austin Radio RoundUp Swapmeet

All,
Greetings from Austin!

This is an announcement inviting your club or group to come to the November 6th Austin Radio RoundUp Swapmeet. Please feel free to pass this information along to anyone who may be interested.

We had around 400 show up last year and hope to have at least that many or more in 2004.

The flier may be seen below, or you may get more information on the www.AustinHams.org website.

We hope to see you on the 6th!

'73 de Jeff N5MNW

2nd Annual AARC-ARO hosted Swapmeet

www.AustinHams.org

Nov 6 (Sat.) St Louis Catholic Church 7601 Burnet Rd

Setup 7AM, doors open 8AM til 1PM (grand prize drawing).

Tables- $10 (no elx), $15 (w/elx). Commercial Vendor setup Friday 2-5PM.

Friday Casino Night Banquet $15/ea, $25/couple- includes dinner & 6 raffle tickets each!

Outside tailgaters' parking lot for cheap and early outdoor swapping.

$1 admission gets one raffle ticket, Additional tickets are $1 each or 6 for $5.

Grand Prize- must present ticket to win.

TCARES talk- in on 146.94

For reservations, contact Lori KM5MQ@... 512-255-6753 or sign up on the website!

970. West Gulf Division website

Yahoo group: Temple_ARC
Date: 2004-10-30 18:54:57 UTC
From: john, ke5c
Topic: 970 Message: 970

Hello Coy,

Thanks again for being Division Director. I'm looking at the ballot for Vice Director trying to figure out what I know about the candidates and how to vote. Leadership is very important, especially at this time, in the ARRL. Maybe it's on the Division website, but I couldn't find anything there about the election or the candidates. Neither could I find anything on the ARRL website, although that was only after about five minutes of searching. Why can't there be some (easy to find) mention on the Division and ARRL websites of the upcoming election and statements by the candidates, or at least links to their websites with mention of the election deadline, etc?

http://www.w5bl.com/
http://www.k5rav.com/

I think members would be much more able to make quality decisions about how to vote if they had easy access to such information. Thank you,

John Dvoracek, KE5C
Temple, TX

John:

You have an excellent point. The ARRL does not provide the support it should for elections. The candidates are on their own!

I would appreciate your vote, John, as there is much to do in the ARRL. I have served as Vice Director for four years and I wish to continue the programs that I have initiated. There is a learning curve at the Board level and I feel that I can benefit the West Gulf Division in many ways.

One of the major programs of the Division is the West Gulf Political Action Network. The Network needs volunteers to work with federal politicians. If you would like to serve, please let me know.

David

Hi John,

Thank you for your interest in the ARRL West Gulf Division Vice Director's election. I was down in your part of the state earlier this week as I visited the Heart of Texas ARC. I see that you have found my web site address and I hope the information on my site was useful to you. Please do not hesitate to contact me if you have any questions I can answer for you. I would really appreciate you vote and support in this election.

73,

Doug Loughmiller, W5BL

975. Back up power

Yahoo group: Temple_ARC
Date: 2004-11-01 23:53:35 UTC
From: Carolyn Black
Topic: 975 Message: 975

From: Leon k5zzm k5zzm@...

This is a great time for everyone to remember to make sure their back up power is available and that we all have plenty of batteries for our HTs. And remember how we all operate on simplex and where. The following frequencies for simplex and repeater operation should help all those that may need to know:

Bell County - 147.140
Bosque - 147.180
Hill - 146.780
Navarro, Falls, Limestone - 145.390
Johnson - 145.490
McLennan 147.320
secondary repeater 147.240 +97.4

Simplex:
Bell County - 145.555
Hill County - 146.540
Navarro, Falls, Limestone counties - 146.550
Johnson County - 146.460
McLennan/Bosque - 147.550

73s and be sure and vote your heart
Leon

Austin SwapNet 10/31/04 de N5MNW, ARO & AARC. Website: www.AustinHams.org

Spooky Spectral Apparitions,

We had several sets of Trick-Or-Treaters at our house Sunday night.
Trying to check into voice and packet nets while treating was a real trick!

If you've delayed signing up for the Radio RoundUp Dinner Party, Tuesday's club meeting will be an excellent opportunity to get counted!

Banquet is $15 each or $25 a couple and includes Saturday swapfest admission!

The Friday night activities will begin with doors opening at 6PM for a fun filled Casino Night, Dinner Entrée by Catfish Parlor (catfish or chicken strips) at 7:30PM.

We will also be holding a silent auction.

Guest Speaker for the dinner banquet will be long time Austin meteorologist, local media personality and Amateur Radio Operator- Troy Kimmel, KE5BCK.

St Louis Catholic Church is at 7601 Burnet Rd. Use the Northern-most entry.

www.austinhams.org/swapfest.html

Of course, let's not forget about the Swapfest on Saturday! Setup begins at 7AM, doors open to public at 8AM. We will have early coffee and donuts, both indoor and outdoor swap areas, a live auction around 10AM and grand Prize drawing at 1PM.

"Super Tuesday" is Nov 2nd. If you have not voted early, please vote then!

If you're not an ARRL member and are considering it, AARC/ARO will apply

$15 towards your AARC/ARO club dues if you sign up for first-time ARRL membership through the club! Take advantage of dual signup, save money, join ARRL and AARC/ARO simultaneously!

Contact John KG5O@... or Roger W5WIA@... for more details.

Austin SwapNet 11/07/04 de N5MNW, ARO & AARC. Website:
www.AustinHams.org

Radio Rounder-Uppers,
The second annual Austin Radio RoundUp was held this past weekend.
Attendance was down a bit from last year but we had twice the fun! If
you could not attend, you missed out on a nice little Hamfest.

Friday night commercial vendors Johnny & Grace Paul with Austin
Amateur Radio
Supply, Mike and Beth Williams with Jubilee and "Bob and Linda" Elder
(KG4ENA)
setup at ~3PM. Phil Galloway and Hangar 18 had been anticipated, but
had to
last-minute cancel with an unexpected hospital trip.

After the commercial setup, a Casino Night and dinner party ensued.

Lori and I played Blackjack with my Mom- Darlene, Jeri Wines, Kevin-
AD5RA,
Connie- KD5UXU and a few others who drifted around the tables. I tried
my hand at
Craps but found I still don't get it... Back to 21!

At around 8PM, Rick KD5ABM and Steve K4MMG delivered food from Catfish
Parlor.
We all eagerly devoured the fare and settled in for meteorologist Troy
(KE5BCK)
Kimmel's after-dinner speech on Amateur Radio and Weather activities.
Roger W5WIA presented Troy with a nice J-38 Morse code key on a wooden
base
with an engraved brass plaque.

Dan N5RVS won Friday night's grand prize, an ICOM 2m Handheld radio.

Saturday's Swapfest setup started before 7AM with tailgaters in front
of the hall.
Out of the 70 tables, about 50 had been pre-registered, leaving only
19-20 for morning
assignment. The hall was fairly full, with a handful of tables
unclaimed or unassigned.

Stuart K5KVH won the grand prize- a new Yaesu FT8800 from Austin
Amateur Radio
Supply. Stu was present at the time of drawing, so we did not have to
ship.

Many, many thanks to the >25 volunteers who, at each event, make these things go
smoothly. You know who you are and I appreciate each one of you. We tried to return
a bit to you with raffle tickets. I know a few winners were hard-working volunteers.

Next year, we will make some minor tweaks to make it an even more fun and
low-stress event.

We have two new additions to the Ham family! Dan KB5TWO is a new Grampa.
His daughter Mindy KC5QFI had a baby boy and Rick KD5ABM is a granddad for the
second time. Congrats!

From www.spaceweather.com and thx to Bill KE5ASU:
AURORA ALERT: An extreme geomagnetic storm, which began around 5 p.m. EST on
Nov 7th, is subsiding now. At its peak last night, the storm produced Northern Lights
as far south as Oklahoma and California in the United States: gallery. A coronal mass
ejection (CME) en route to Earth and due to arrive on Nov. 8th or 9th, could re- energize the storm. Remain alert for auroras!
Space Weather News for Nov. 7, 2004
Big sunspot 696 unleashed an X-class solar flare on Sunday, Nov. 7th, and probably
hurled another coronal mass ejection (CME) toward Earth. Solar wind conditions are
favorable for a geomagnetic storm now (late Nov. 7th) and may become even more
so when the CME arrives. Sky watchers: be alert for auroras on Nov. 7th, 8th and 9th.
The best time to look is usually around local midnight.

AARC Christmas Party will be held Dec 14th (2nd Tue) at the Episcopal Church
of the Resurrection, 2008 Justin Lane. $7 per person in advance or $10 per person
at the door.
Register before Dec 7th and get 2 extra door prize tickets per person.

Featured entertainment is George Toone WB5FBJ. He will bring his unique light- hearted wit and musical talent.
The dinner will be provided by Muller's BBQ and will include: Smoked Turkey,
Brisket, sausage, beans, coleslaw, pickles, onions, and their incredible sauces!
Don't forget this year again is a potluck dessert, so bring your favorite and

share in what others have brought!
Of course we will have our annual QLF contest, table top decorating contest,
and lots of door prizes!
Make checks payable to AARC and mail no later than Dec 7th to:
Mitch London
5601 Lewood Dr.
Austin, Texas 78745
A map and other details can be seen at: www.austinhams.org/xmas2004.html

The 2005 3M Half Marathon, scheduled for Sunday, January 30, is looking for ham radio
volunteers.
The 3M Half Marathon and Relay is Austin's third-largest road race. This year's
beneficiary is the Capital Area Food Bank. 3M is guaranteeing a $15,000 donation to the
Capital Area Food Bank in conjunction with the race.
This community event requires approximately 500 volunteers (about 25 of whom are ham
radio volunteers) who donate their time before or on race day. Your support is important.
Ham radio volunteers will provide emergency, health and welfare communications for
medical support and water stations. Volunteers will need a handheld or mobile 2-meter
radio and be licensed to operate in the 2-meter VHF band (we will be operating on the 3M
ARC repeater on 146.90MHz.)
Volunteers will receive a t-shirt for identification, and high-visibility vests will be provided
for use on race day (vests must be returned to 3M ARC after the race.)
A pre-race briefing for amateur radio volunteers will be held at the 3M ARC meeting on
Thursday, January 13, 2005 at Mr. Gatti's Pizza, 12129 Ranch Road 620 N (620 at Lake
Creek Parkway) at 6:00 p.m.
To volunteer or to run, go to www.3m.com/races/ (scroll down to the bottom of the page
for the volunteer form link -- choose Amateur Ham Radio as your volunteer interest)
Many other kinds of volunteers are needed as well. Please encourage your non-ham
friends and family to volunteer in an area that interests them. Thank you for your support! '73 Dan Cronch N5RVS 3M Electronic Solutions Division 984-3882

If you're not an ARRL member and are considering it, AARC/ARO will apply
$15 towards your AARC/ARO club dues if you sign up for first-time ARRL membership through the club! Take advantage of dual signup, save

money,
join ARRL and AARC/ARO simultaneously!

ARRL Bulletin 34 ARLB034

>From ARRL Headquarters

Newington CT November 8, 2004

To all radio amateurs

SB QST ARL ARLB034

ARLB034 FCC suspends Amateur Service license grants

The FCC has stopped issuing Amateur Service license grants while it attempts to unravel an apparent computer programming glitch. The FCC posted a public alert on the Universal Licensing System (ULS) site on November 5. At this point, no one seems to know when the problem will be fixed.

''The granting of Amateur applications has been temporarily suspended,'' the FCC announcement says without further explanation.

''We apologize for the inconvenience.'' The Commission has given no indication when processing might resume, but when it does, the FCC likely will pull back more than 125 Group D (2x3) amateur call signs it mistakenly issued out of sequence and grant the applicants new in-sequence call signs. Although they eventually may be set aside and replaced, all call signs showing up in the ULS database are legal to use on the air.

The difficulties began October 28, when the FCC implemented a ULS software change that caused applications to be processed improperly.

ARRL Volunteer Examiner Coordinator Manager Bart Jahnke, W9JJ, says the FCC was forced to halt the processing of amateur applications after attempts to correct the initial error only seemed to make things worse. ''The FCC is still trying to get its arms around the problems,'' he said this week.

The ARRL VEC has been working with personnel in the FCC's licensing branch to identify where the FCC had been in the call sign sequences, where it had jumped to and where it was supposed to be.

Jahnke says the problem appears to have affected only Group D call signs.

Ham Radio software UPDATE:

MixW214a was released Saturday, November 13, 2004.
(MixW is still one of the most versatile Ham Radio DIGITAL MODE programs, and was written by Nick Fedoseev)

What's New:
---> It has a new cty.dat, pfx.dat, new Ukrainian DX Contest and a new YO Int. PSK31 contest DLLs included.

---> The MixW2.exe has a few more bugs fixed.

---> It also has a "PTT off" switch for CW operations, which is required for some Kenwoods and Yaesu radios.

991. FCC RESUMES PROCESSING AMATEUR SERVICE APPLICATIONS

Yahoo group: Temple_ARC
Date: 2004-11-13 07:37:55 UTC
From: Steve Bosshard (NU5D)
Topic: 991 Message: 991
Attachments: 2 described; binary payloads are missing from this source WARC

==>FCC RESUMES PROCESSING AMATEUR SERVICE APPLICATIONS

The FCC is back in the business of issuing Amateur Service license grants after a shutdown of several days. The Commission's Wireless Telecommunications Bureau (WTB) halted processing of Amateur Service applications November 5 after a Universal Licensing System (ULS) <HYPERLINK "http://wireless.fcc.gov/uls/"http://wireless.fcc.gov/uls/> computer programming problem caused application grants to go awry. Besides creating an application backlog, the glitch resulted in the issuance of nearly 130 out-of-sequence Group D

(2x3) amateur call signs. Those erroneous grants now have been set aside, and licensees have been issued new, in-sequence call signs.

"The Commission appears to have corrected the earlier erroneous call sign assignments," ARRL Volunteer Examiner Coordinator Manager Bart Jahnke, W9JJ, said November 11. "In the past 24 hours, the FCC has issued 1915 Amateur Service grants, some of which were corrections for the earlier call sign anomalies." Jahnke says the rest of the grants represented the application backlog and an initial run of some 600 applications for license renewal, license modification, vanity call signs and administrative updates the WTB did November 10 to check out the system.

Austin SwapNet 11/14/04 de N5MNW, ARO & AARC. Website:
www.AustinHams.org

Fast Fourier-ers,
Cold, wet and soggy WX here in Central TX for the past few days.
More to come, as it looks. Lori and I hope you all stay warm and dry!

There has been more voice activity on 60m lately. I've heard USB sigs
on 5.346.5 (ch2) and 5.371.5 (ch4). Lori and I can be heard on ch1 or 2
around
5PM in the evenings during drivetime. Join us!

AARC Christmas Party will be held Dec 14th (2nd Tue) at the Episcopal
Church
of the Resurrection, 2008 Justin Lane. $7 per person in advance or $10
per person
at the door.
Register before Dec 7th and get 2 extra door prize tickets per person.

Featured entertainment is George Toone WB5FBJ. He will bring his
unique light- hearted wit and musical talent.
The dinner will be provided by Muller's BBQ and will include: Smoked
Turkey,
Brisket, sausage, beans, coleslaw, pickles, onions, and their incredible
sauces!
Don't forget this year again is a potluck dessert, so bring your
favorite and
share in what others have brought!
Of course we will have our annual QLF contest, table top decorating
contest,
and lots of door prizes!
Make checks payable to AARC and mail no later than Dec 7th to:
Mitch London
5601 Lewood Dr.
Austin, Texas 78745
A map and other details can be seen at: www.austinhams.org/xmas2004.html

If you're not an ARRL member and are considering it, AARC/ARO will
apply
$15 towards your AARC/ARO club dues if you sign up for first-time
ARRL membership through the club! Take advantage of dual signup, save
money,
join ARRL and AARC/ARO simultaneously!
Contact John KG5O@... or Roger W5WIA@... for more details.

999. LOCAL REPEATER COMMANDS FOR WEATHER INFORMATION

Yahoo group: Temple_ARC
Date: 2004-11-17 03:24:05 UTC
From: ctsslampasas@a1cmugs.com
Topic: 999 Message: 999

The Lampasas Repeater has the following Commands available with your DTMF Touch Tones.

00# - Repeater Information
00* - Transmit Local Time
11* - Transmit Local Weather Information (Updated every Minute)
22* - Transmit Local Area Daily Forecast
33* - Transmit Weekly Weather Forecast
88* - Transmit EchoLink Node Status
99* - Transmit CTSSG Help Files and Commands (This Menu)

60 - Transmit RSGB Bulletins
70 - Transmit Local CTSSG Group Bulletins
99 - Transmit WWV Solar Flares Report

Hope you will enjoy using our repeater
These are available from 05:00-22:00 Daily

Tommie WD9HNB

1000. SKYWARN Recognition Day 2004

Yahoo group: Temple_ARC
Date: 2004-11-18 11:08:47 UTC
From: ctsslampasas@a1cmugs.com
Topic: 1000 Message: 1000

Please forward this to North Texas Amateur Radio operators.

SKYWARN Recognition Day 2004
For the sixth year in a row, the National Weather Service will again host an Amateur Radio special event. The event is known as SKYWARN Recognition Day 2004. This year the event will occur on Saturday, December 4th, 0000 - 2400 UTC. This is Friday, December 3rd, 18:00 to Saturday, December 4th, 1800, north Texas local time.

SKYWARN Recognition Day was developed in 1999 by the National Weather Service and the American Radio Relay League. It celebrates the contributions that volunteer SKYWARN radio operators make to the National Weather Service. During the day SKYWARN operators visit National Weather Service offices and contact other radio operators across the world. Full details about this National Weather Service Special Event are contained at the 2004 Special Event web site.

The special event call sign to be used at the Fort Worth National Weather Service will be WX5FWD. David McAnally, KF7FLY, is coordinating the special event schedule for this year. Special thanks to Frank Krizan, KR1ZAN, for coordinating the event for the past few years, and for passing on his experiences to David for this year.

As with previous years, a significant number of licensed Amateur Radio volunteers are needed to staff radio stations at the Fort Worth National Weather Service office over the 24 hour event. We expect to operate stations for HF, VHF/UHF, PSK-31, VOIP on EchoLink/IRLP and on APRS. If you would like to volunteer as a radio operator at the National Weather service office during this event, please contact David McAnally via email to KF7FLY@... with the subject "SRD 2004". Volunteers may also join the WX5FWD Yahoo group and mailing list, also linked at the bottom of this email.

We hope you will be able to take part. Volunteers are asked to commit to at least 2 hours of operation, plus approximately one additional hour observing and training prior to operating to get acquainted with the equipment and logging. Schedules and additional information for volunteers will be published on the WX5FWD Yahoo! Group, http://groups.yahoo.com/group/WX5FWD/. We also hope to coordinate scheduled radio contacts with SKYWARN groups and operators in the 46 north Texas counties that receive weather forecasts and warnings from the Fort Worth National Weather Service office.

Regards,
David McAnally, KF7FLY

> MEET ME ON ONE THE BANDS, BRAVE THE MULTITUDE TURN ON THE RADIO
AND PASS OUT
> SOME CONTACTS.

this is a very big contest, probably the biggest stateside contest of the calender year. the exchange simulates a traffic message header and is one of the longest contest exchanges in use.

when: 3 pm saturday to 9 pm sunday

where: most ops will be in the lower 2/3's of the ssb subbands

exchange: serial_number + precedence + callsign + check + section
-----serial number starts with "1"
-----precedence Q for 5W or less, A for 150W or less, B for more (you'll actualy use a phonetic like queen, alpha or bravo, not Q,A, or B)
-----check is last two digits of year licensed
-----section here is north texas

so if i hear "cq contest cq contest whiskey-five-siera-siera-golf contest" or "cq sweepstakes whiskey-five-sierra-sierra-golf sweepstakes" or something similar, i'll reply "kilo-echo-five-charlie". i won't say "w5ssg this is kilo-echo-five-charlie" because that takes too much time and if i am on w5ssg's calling frequency, he'll know i'm calling him - if he hears me over the crowd.

if things go well, i'll next hear "kilo-echo-five-charlie 345 bravo 83 w5ssg north-texas". or if he's talkative (or a big traffic handler just handing out a few contacts) i'll hear "kilo-echo-five-charlie please copy my number 125 alpha check 83 whiskey-five-siera-siera-golf north-texas". his serial number will now be a lot lower since he's taking so long to send the exchange that he won't have had as much time to make contacts.

i'll reply "w5ssg 13 bravo 79 ke5c north-texas" and i'll probably add "good luck" or "73", but not necessarily so. i won't use phonetics - unless band conditions are terrible - because by now w5ssg knows i am talking to him, and he knows my call if he already gave me my exchange/report. since i'm only on very casually, he'll have been just my thirteenth contact, and i'm running a kw because i am lazy and don't want to call folks more than once or twice.

if he's a serious contester, i'll next hear "roger" or "73" or "thank you" or "qsl" followed immediately by a cq call. if he's not, i may hear something like "kilo-echo-five-charlie this is

whiskey-five-sierra-sierra-golf thanks so much for the very fine business contact and have a great day from whiskey-five-sierra-sierra-golf". whatever.

1007. Mutual Inductance

Yahoo group: Temple_ARC
Date: 2004-11-20 19:55:23 UTC
From: john_ke5c
Topic: 1007 Message: 1007

If I remember this stuff correctly, a transformer couples two circuits through a property called mutual inductance. You can increase this by using an iron core and a lot of windings, but two wires simply side by side are also a transformer. They usually aren't very interesting because the mutual inductance is so low that they induce very little voltage (or current) in each other. However, if one wire is very hot, even with minimal mutual inductance, some effects can be seen in the other wire.

I rarely operate 80 meter ssb, much less 80 meter ssb at one kilowatt out, but the one time I did, I used a center-fed, untuned dipole (a "zepp" I believe) which runs from my tower at about 40 feet down to my fence one way and my garage eave trim the other way. This second leg runs directionally over my house almost parallel to and just above the second floor hallway. In this hallway, under the carpet, is a CAT5 cable running from a Linksys router to my son's old bedroom. This cable is about 30 feet long.

Recently my son was home operating his computer while I first transmitted on 80 meter ssb at 1.4 or so KW output. He came running into the radio room shouting "turn it off!" He could hear a sizzle (and soon smell) every syllable I transmitted. A quick damage assessment revealed he no longer had internet working on his computer which was otherwise fine. My computer was fine, and the router seemed fine.

A more detailed examination showed the port to which he was connected on the router was dead although the rest of the router was fine. His mother board had a burn area where the txd/rxd traces went into the embedded LAN controller chip. These two chip legs were actually burned through. A lot of soot was present on a pedestal which houses the CAT5 connector, but the soot was present not in the area of the connecter but on the ground shield, so it appeared the chip legs (and probably nearby board traces) had arc'ed over to the pedestal shield. Amazingly, the computer was fine otherwise. After removing the mother board, we learned another arc path was from the bottom of the board to the computer case:

http://www.bosshardradio.com/gallery/albums.php - select "mutual inductance"

I think this was "common mode" coupling. There was no voltage induced between the txd/rxd pair per se, but each wire in the pair had an equal (and apparantly quite high) rf voltage induced relative to ground, and the computer case and pedestal shield were the closest ground paths. The LAN controller actually has two internet

ports, and the second port still worked.

I have no pictures, but inside the router, the txd/rxd traces for the dead port and a few associated chip components were burnt to a crisp. As mentioned, the router otherwise worked fine. I suppose it's also possible that somehow the CAT5 cable looked to be near resonance at my operating frequency which would cause it to function like an antenna too, but the length seems way wrong for that. This further confirms my impression and experiences that running high power is lot more testy than running barefoot.

Austin SwapNet 11/21/04 de N5MNW, ARO & AARC. Website: www.AustinHams.org

Signal Precipitators,

More rain, supersaturated ground and even more rain has caused fairly severe flooding in Central and South Texas. Hams all across the state and the region have activated to assist in shelter and recovery efforts.

A W5YI exam session is being held at LBJ High on Tuesday. Lori is one of the VE's and we are looking forward to many of the dozen or so in Ronnie KC5EES's class to pass the Tech and 5wpm code. Listen for some new voices and welcome them!

Jim KB7UQD passed his General exam this past weekend. Congrats, Jim!

AARC Christmas Party will be held 6-10PMDec 14th (2nd Tue) at the Episcopal Church of the Resurrection, 2008 Justin Lane. $7 per person in advance or $10 per person at the door.

Register before Dec 7th and get 2 extra door prize tickets per person.

Featured entertainment is George Toone WB5FBJ. He will bring his unique light- hearted wit and musical talent.

The dinner will be provided by Muller's BBQ and will include: Smoked Turkey, Brisket, sausage, beans, coleslaw, pickles, onions, and their incredible sauces!

Don't forget this year again is a potluck dessert, so bring your favorite and share in what others have brought!

Of course we will have our annual QLF contest, table top decorating contest, and lots of door prizes!

Make checks payable to AARC and mail no later than Dec 7th to:

Mitch London

5601 Lewood Dr.

Austin, Texas 78745

1027. Austin Swap Net

Yahoo group: Temple_ARC
Date: 2004-11-29 17:25:35 UTC
From: Steve Bosshard
Topic: 327 Message: 1027

Austin SwapNet 11/28/04 de N5MNW, ARO & AARC. Website:
www.AustinHams.org

FM Fanciers,
A few more days of rain and severe weather early last week made
headlines
and made footage for local news broadcasts. The TSSI spotter team was
active.
Jeff N5SSI (and Mickey WX5U?) participated in a water rescue as cameras
rolled.
Blake W5XDG took footage of an F0 tornado near Jarrell.
See www.chase-1.com/news.htm for details and images.

A successful W5YI exam session was held at LBJ High on Tuesday and
seven new
Hams came out of the session. Thanks to the W5YI team and congrats to
the
baker's half-dozen of youngsters!

Bill KE5ASU saw this "ready kit" link on AOL and wants to pass it
along: www.hometown.aol.com/haminfo/

Sunday night, Bruce W3NJ announced the International Space Station was

on 145.80MHz packet and was going to make an 8-minute overhead pass.
I captured a beacon transmission from the station but did not make
contact.

AARC Christmas Party will be held 6-10PMDec 14th (2nd Tue) at the
Episcopal
Church of the Resurrection, 2008 Justin Lane. $7 per person in advance
or
$10 per person at the door.
Register before Dec 7th and get 2 extra door prize tickets per person.

Featured entertainment is George Toone WB5FBJ. He will bring his
unique light- hearted wit and musical talent.
The dinner will be provided by Muller's BBQ and will include: Smoked
Turkey,
Brisket, sausage, beans, coleslaw, pickles, onions, and their incredible
sauces!
Don't forget this year again is a potluck dessert, so bring your
favorite and
share in what others have brought!
Of course we will have our annual QLF contest, table top decorating
contest,
and lots of door prizes!

Make checks payable to AARC and mail no later than Dec 7th to:
Mitch London
5601 Lewood Dr.
Austin, Texas 78745
A map and other details can be seen at: www.austinhams.org/xmas2004.html

If you're not an ARRL member and are considering it, AARC/ARO will
apply
$15 towards your AARC/ARO club dues if you sign up for first-time
ARRL membership through the club! Take advantage of dual signup, save
money,
join ARRL and AARC/ARO simultaneously!

Subject: [amateur_radio] Re:I R L P Info please . . .

Hello List,

I went to the IRLP site to find Node info for the Temple, TX
area. All the site would mention was that there are 6 to 10 Nodes in the
5 mile radius of Temple. Nothing more.

Is there a site that I could fine out more info on IRLP nodes in
Temple? I need to find out about freqs & (if needed) P/L tones.

1038. FW: [amateur_radio] CIS DX CW Contest

Yahoo group: Temple_ARC
Date: 2004-12-02 22:56:45 UTC
From: Steve Bosshard
Topic: 1038 Message: 1038

The Scottish-Russian ARS has the honour to invite the radio amateurs all over the world to participate in the CIS DX CW Contest (00:00 - 24:00 UTC 05.12.2004). The objective of the contest is to establish as many contacts as possible between radio amateurs around the world and radio amateurs in the Commonwealth of Independent States using the RTTY mode. Everybody can work everybody for QSO and multiplier credit.

1043. Report on DIGTRX Version 2.08

Yahoo group: Temple_ARC
Date: 2004-12-05 17:33:45 UTC
From: Charlie Schlieper
Topic: 1043 Message: 1043

Ham Radio software report:

Digtrx 2.08, which was released Friday, December 3, 2004,
is working very well! I have noticed that this version seems to
decode perfect pictures from waterfalls you wouldn't even expect
success from. I normally don't followup on software updates,
but 2.08 is more stable in Windows 98 and Windows XP platforms
than before, and operates better than I have previously experienced.
I highly recommend DIGTRX 2.08 if you are a Ham who uses RDFT
(Redundant Digital File Transfer) modes.

To: Pass on Information below

The Temple XMAS Parade is Mon, Dec. 6. Parade starts at 6:30 p.m. from MLK (8th St.) where the float stagging area will be. Lineup starts about 4 p.m. or earlier and is completed by 5 p.m. in time for judging entries. The parade will run West on Central and destage before 25th St. The event should end about 8:30 p.m.

Hams are needed to assist the lineup in the stagging area from about 4:15 to 5 p.m. Then radio operators are needed to man the golf carts on the parade route for crowd control. A Ham is also needed to ride the shuttle bus from about 4:30 until 6 p.m.

Three to four hams are are needed for the lineup and the same number for golf carts.

Look for me between 3:30 - 4 p.m. at the Memorial Baptist Church parking lot at the corner of Central and 25th street for instructions. We will use Tony's WB5TTY's repeater 145.49 Mhz Tone: 123. The repeater is located at the VA Center and has excellent coverage for this event.

Tnx, CU Monday.

73, Roy N5HQR

To: For TARC Net

At noon today the Temple XMAS Parade cmte will meet to decide whether to continue with the XMAS parade today. The parade is still go but may be cancelled due to inclement weather.

I will know shortly after 1 p.m. of the decision. As soon as known I will announce the decision on .82 and 145.49 as well as a msg on the TARC Net.

Because TARC has supported the City of Temple for years in the parade, the organizers stress how important TARC is this year to the event. In fact, other than the Chamber of Commerce, TARC is the only volunteer organization helping w/ crowd control for the event. The city no longer depends on a service club that used to assist. As a result the golf carts this year will be primarily for TARC use.

Will keep you informed.

Subject: XMAS Parade Cancellation

For: TARC Reflector

The Temple XMAS Parade has been cancelled and is rescheduled for this Thursday, Dec. 9. Times, location and requirements remain the same.

Parade committee again emphasied their thanks for our support and standing by. We will all be be needed again this Thursday for the event.

Thanks in for standing by. I plan to go to Memorial Baptist Church parking lot at 3:30 p.m. today to intercept any Hams not informed of the change.

Hope to CU this Thursday.

Austin SwapNet 12/05/04 de N5MNW, ARO & AARC. Website: www.AustinHams.org

Holiday Hailers,

Lori and I trekked to New Braunfels on Saturday for the Skywarn Recognition event. Many area ham groups were well represented, thanks to Larry Eblen, NWS staff and the hams that donated equipment for the special event station.

Kathy KD5QPH, better half of Chuck- KB5YKJ passed her 5WPM test and is now a Tech "Plus". She's soooo close to General! We are very proud of her.

The club has another loaner station added to the list! A 2m packet station with A Kenwood 2m radio, KPC3 TNC and a power supply are now available for members to borrow.

AARC Christmas Party will be held 6-10PMDec 14th (2nd Tue) at the Episcopal Church of the Resurrection, 2008 Justin Lane. $7 per person in advance or $10 per person at the door.

Register before Dec 7th and get 2 extra door prize tickets per person.

Featured entertainment is George Toone WB5FBJ. He will bring his unique light- hearted wit and musical talent.

The dinner will be provided by Muller's BBQ and will include: Smoked Turkey, Brisket, sausage, beans, coleslaw, pickles, onions, and their incredible sauces!

Don't forget this year again is a potluck dessert, so bring your favorite and share in what others have brought!

Of course we will have our annual QLF contest, table top decorating contest, and lots of door prizes!

Make checks payable to AARC and mail no later than Dec 7th to:

Mitch London

5601 Lewood Dr.

Austin, Texas 78745

1049. Known Problem in MMSSTV 1.11

Yahoo group: Temple_ARC
Date: 2004-12-07 22:41:18 UTC
From: Charlie Schlieper
Topic: 1049 Message: 1049

I am repeating this information from the MMSSTV website, as many people seem to overlook it when using the program MMSSTV.

The problem occurs when running MMSTV from a Windows Shortcut

Q- Why does MMSSTV creates a file on my desktop? (yourcallsign 'dot' MDT)

A - This happens because the path to MMSSTV is not properly set in the shortcut.
** Yes, I know... It works just fine, but read on **

Q- When starting MMSSTV from your "Desktop" or "Quicklaunch" Shortcut, you get a box popping up that says "Log file (yourcallsign.MDT) does not exits, create it?" If this happens, "Answer NO." If you answer YES, your Log file may be put on your desktop.

A- To avoid this happening or to fix this problem do the following:

Right click on the "Desktop" and/or "Quicklaunch" icon, then click "Properties".

Next Edit the shortcut: In the "Start in" box, it may be BLANK. You need to add the correct path where you have installed MMSSTV. eg. "C:\Program Files\MMSSTV" if you installed MMSSTV in the default folder. Then click APPLY and OK. Problem solved.

1050. DIGIPAN Version 2.0 Multi-Chnl

Yahoo group: Temple_ARC
Date: 2004-12-08 02:36:44 UTC
From: Charlie Schlieper
Topic: 1050 Message: 1050

Ham Radio software UPDATE:

Digipan 2.0 was released November 1, 2004.
(Software carries a date of October 26, 2004) Digipan is
a PSK program, credited to Skip Teller, KH6TY, UT2UZ,
and UU9JDR.

What's New:
- Version 2.0 is the Ninth Release of Digipan
- Multi-Channel Reception added, which automatically copies
all the decodable activity on a frequency simultaneously!
(Up to 26 Channels are possible, with 17 visible on default.)
Selectable with F-12 toggle to Single Chnl or Multiple Chnl.
- CQ Alert added - CQs are tagged with YELLOW by default
There are three ALERT COLORS possible, two of which you
can configure yourself. (CQ DX is an example)
- Callsign Lookup (via Internet) feature added
- RX and TX Offset adjust added.
- In the MultiChannel Mode, the program not only automatically
copies every PSK channel on the spectral display at one time,
but also tags them for identification... A through Z on the spectral
display.
- F-11 clears the multichannel display.
- The active channel for xmit is still noted by the GREEN flag and
RED diamond, and can be locked in place.

PERSONAL NOTE:
If you're a person who can listen to SIX radios at the same time,
Digipan 2.0 will be a real 'hoot' of an experience! I have tried it
when 14 stations were on at the same time, and I must say I was
overwhelmed; however, it is a super way of monitoring an entire
group of PSK-31 signals simultaneously.

1056. XMAS Parade Thursday

Yahoo group: Temple_ARC
Date: 2004-12-08 18:58:12 UTC
From: Roy Wells
Topic: 1056 Message: 1056

To: TARC Reflector

As you know Temple XMAS Parade is now tomorrow, Thur, Dec. 9. Same requirements exist to support the event.

TARC is being asked to assist in parade lineup until about 5 p.m., then crowd control from 6 to about 8:30 p.m. during the parade. The city will provide golf carts for us. If you can only work an hour or couple hours you help will be greatly appreciated. Assistance in crowd control during the parade is the priority.

My location will be in the Immanuel Baptist Church parking lot (25th and Central) from 3:15 to about 4 p.m. There I will meet you and provide instructions and a packet on where to park, pick up golf carts and other information. After 4 p.m. I will move to vicinity of the lineup area on MLK St. (8th St.).

We will use Tony's WB5TTY repeater located at the VA Center. Freq is 145.49, tone: 123.

Hope to CU Thursday.

73, Roy N5HQR n5hqr@...

1057. SSTV-PAL MultiMode Update 9-Dec-04

From: Charlie Schlieper
Topic: 1057 Message: 1057

Ham Radio software report:

SSTV Pal MultiMode--> latest upgrade Dec 9, 2004.
(Pal SSTV was first introduced by VK4AES in 2002.)
You must have Windows XP to use this software.

Download via:
< http://www.kb1hj.com/hdstv.htm >
(Installation Instructions are included on this site.)

You will need IRFanview, along with the Plugins (allplugins.exe) for this program to work.
< http://www.irfanview.com >
The Pal MultiMode "SUPER MODE" is reported to be better than DIGTRX for poor HF band conditions.

1061. Temple XMAS Parade

Yahoo group: Temple_ARC
Date: 2004-12-13 01:05:48 UTC
From: Roy Wells
Topic: 1061 Message: 1061

To: TARC

From: Roy N5HQR n5hqr@...

The Temple Amateur Radio Club supported the Temple XMAS parade Thur, Dec. 9, with eight Ham operators. Weather couldn't have been better making the parade a success and well attended.

Working the parade was outgoing club Treasurer John Biles AD5PB, Bill Killebrew WD5ELK, Pres. Elect Darwin Geiselbrecht K5DOA, Sec.Tom Olsen KC5KXS, Myron Mesecke N5TFK who had with him his two daughters Allison and Andrea, VP Ron Thompson W5WRE, Tony Mikulastik WB5TTY and Roy Wells N5HQR.

Jim Thigpen, one of the principal orgainizers of the parade, expressed his appreciation to TARC for their support. As he has often said, the Temple Amateur Radio Club's support is essential for the parade to be a success. He was especially praiseworthy of TARC's role in crowd control and the prompt use of communcations whenever there was a problem. He also expressed appreciation for assistance during lineup of the parade entries.

Thanks to Tony WB5TTY for the use of the 145.49 repeater located at the VA Center.

73, Roy N5HQR

1065. SKN: Straight Key Night - Bah; humBUG

Yahoo group: Temple_ARC
Date: 2004-12-14 20:09:14 UTC
From: john, ke5c
Topic: 1065 Message: 1065

The ARRL Contest Committee has stated that the use of BUGs is in the "Spirit of SKN". The intent is to use mechanical vs electronic keying. See you on New Year's Eve? Here's an interesting story about this:

Date: Sun, 12 Dec 2004 08:51:01 -0700
From: "Indy" <kt5x@...>
Subject: [Elecraft] BUG night - new year's Eve
To: <elecraft@...>

Straight Key Night? Bah, humBUG !!!!

Brief reminder that in keeping with tradition, SKN New Year's Eve has been transmuted into BUG Night (or perhaps "Any Old Key Night," as in, isn't the idea to just have fun and meet people?) for those with either sufficient skill and daring or the hutzspah necessary to over-come the lack there-of.

The tradition began on the New Year's Eve 2000 when KT5X boldly broke with tradition and put a 1917 Cloverleaf blue racer on the air. His CQ was answered by KE5C who was using a 1923 Cloverleaf blue racer. Soon the QSO was broken into by WD9FJL who by shere chance was responding to the bug sent CW using HIS 1919 Cloverleaf blue racer! This three-way QSO was interrupted by N6WU (SK) who was using, yup, a 1918 Cloverleaf blue racer --- A Four Leaf Clover QSO was created.

A few days later, KT5X received a QSL from a W6 who said, "I heard you guys and tried to break in with my 1921 Cloverleaf blue racer, but no one could hear me." But of course not. Who ever heard of a FIVE leaf clover, I ask you???

This activity is no way intended to be a contest. IJust enjoy New Year's Eve. Folks are encouraged to use a variety of old keys and bugs, and tell stories about them. It is nostalgic. It takes skill. There is no starting time. There is no ending time. Gathering frequencies are 14.025, 7.025, and 3.525, plus or minus.

Last year Russ, WA5Y, (a serious collector of old keys) put some really rare ones on the air. He used a 1918 Midget, 1917 Upright, and a 1946 Melehan. what astonishing old key will you come across?

Please do distribute the invitation far and wide. And don't forget that the old coastal station, KPH will be QRV that night as well, using the call, W6KPH.

73,

Fred
KT5X

Topic: 327 Message: 1067

Austin SwapNet 12/12/04 de N5MNW, ARO & AARC. Website: www.AustinHams.org

Yule Log Periodics,

Lori and I wish each of you a warm and very happy Holiday Season.

We mourn the loss of Aldona Campbell, who joined Duke K5GDH last Friday in eternity.

Kendall Co SET went fairly well from reports I heard. Voice and digital modes were used in the exercise.

Updates have been added to the Skywarn schedule (from the DFW office-reaching down to Bell Co.) on the LSSN website. Glad to see there are alot of Advanced classes added this year. Will post our area schedule when it comes out. This page is updated weekly if any new posts come out, so refer back to it in the future. See schedule at:

HYPERLINK "http://www.centexstormspotters.net/schedules.htm"http://www.centexstormspotters.net/schedules.htm

from Jeff N5SSI www.chase-1.com www.centexstormspotters.net

Danny N5DRG has a special need. His brother unexpectedly passed away, leaving almost a dozen active, friendly 1yr old dogs in his care. He is looking for takers of these friendly white/black mixbreed mutts and would love for them to find homes before Christmas. Contact Danny N5DRG 259-1063 or cell 740-5030.

AARC Christmas Party will be held 6-10PMDec 14th (2nd Tue) at the Episcopal Church of the Resurrection, 2008 Justin Lane. $10 per person at the door.

Featured entertainment is George Toone WB5FBJ. He will bring his unique light- hearted wit and musical talent.

The dinner will be provided by Muller's BBQ and will include: Smoked Turkey, Brisket, sausage, beans, coleslaw, pickles, onions, and their incredible sauces!

Don't forget this year again is a potluck dessert, so bring your favorite and share in what others have brought!

Of course we will have our annual QLF contest, table top decorating contest, and over $2000 of door prizes!

A map and other details can be seen at: www.austinhams.org/xmas2004.html

If you're not an ARRL member and are considering it, AARC/ARO will apply

$15 towards your AARC/ARO club dues if you sign up for first-time ARRL membership through the club! Take advantage of dual signup, save money, join ARRL and AARC/ARO simultaneously!

Contact John KG5O@... or Roger W5WIA@... for more details.

Topic: 1068 Message: 1068
Attachments: 1 described; binary payloads are missing from this source WARC

Steve you may put this out on you TARC GROUPS as this may help save someone from a house fire...
I had 2 here that I get 2 Replacements..
Tommie

If you have a DELL LAPTOP you need to check the following URL to see if your AC ADAPTER maybe in the recall list. There is a fire hazard for these adaptor and it maybe your life if you continue to use it.

https://www.delladapterprogram.com/multiorder.aspx

SEE NOTE BELOW:

Dear Dell Customer,

In cooperation with the U.S. Consumer Product Safety Commission, Dell is voluntarily recalling and offering free replacements for certain AC adapters that were sold for use with some models of Dell Latitude, Dell Precision and Dell Inspiron notebook computers. It is possible for the adapters to overheat, which could pose a risk of fire or electrical shock.

Potentially affected adapters were sold with the following models of Dell notebook computers:

a.. Latitude CP, CPi, CPiA, CPtC, CPiR, CPxH, CPtV, CS, CSx, CPxJ, CPtS, C500, C510, C600, C610, C800, C805, C810, V700, C-Dock, C-Port
b.. Inspiron 2500, 2600, 3700, 3800, 4000, 4100, 4150, 5000, 5000E, 7500, 7550, 8000, 8100, Advanced Port Replicator, Docking Station
c.. Precision M40
The adapters were also sold separately, including in response to service calls. The adapters were shipped to customers between September 1998 and February 2002. The words "DELL," and either "P/N 9364U", "P/N 7832D", or "P/N 4983D" are printed on the back of the adapters.

To find your adapter model Click here

We are notifying you because our records show that you purchased one or more of those notebook computers and/or adapters during the noted date range. Note that not all the above-described adapters sold during the noted date range are affected. To determine whether your adapter is affected by this issue, you should Click Here. The website will direct you to find and enter an identification number from the back of your AC adapter so as to determine whether the adapter is affected by this issue. If the adapter is affected by this issue you will be automatically connected to a replacement order entry request form or be provided with a phone number for your region. Dell will also provide a means for you to return the affected adapters for proper disposal.

You can also write to the company at Dell Inc., Attn: Adapter Program, 9701 Metric Blvd., Austin, TX 78758.

Please note that only the described power adapters are subject to this recall and not the notebook computers themselves.

overheating, you should immediately unplug the adapter at the wall electrical outlet and notify Dell.
Dell apologizes for the inconvenience caused by this issue. Shipment of quality products always has been and continues to be Dell's foremost concern. As always, if you have questions or concerns about this or any other subject, please feel free to contact Dell Support in your region.

Sincerely,

Dell Inc.,
Attn: Adapter Program

From: n5nir@wt.net
Topic: 1070 Message: 1070

ALL THE BELOW POLICE OFFICERS SAY THIS IS THE RIGHT THING TO DO NOW.....I DID..... BUT FOLLOW THE INSTRUCTIONS CAREFULLY FOR EACH PHONE NUMBER YOU REGISTER.....THREE PER EMAIL ADDRESS.....PRINT ALL INFO. FOR YOUR RECORDS.....REPEAT.....FOLLOW INSTRUCTIONS ..... THE WO

Starting Jan 1, 2005, all cell phone numbers will be made public to telemarketing firms. So this means as of Jan 1, your cell phone may start
ringing off the hook with telemarketers, but unlike your home phone, most of you pay for your incoming calls. These telemarketers will eat up your
free minutes and end up costing you money in the long run.

According to the National Do Not Call List, you have until Dec. 15th 2004
to get on the national "Do not call list" for cell phones. They also said you ca n either
do it online at www.donotcall.gov or call 1-888-382-1222 from the cell phone

that you wish to have put on the "do not call list" to be put on the list.

Registering only takes a minute, is in effect for 5 years and will possibly
save you money (definitely frustration)!

False alarm... this is an urban legend (with respect to the expected flood of incoming telemarketing calls). It is true that you can register ANY phone number with the federal "do not call" registry.

This is true. The kicker is that you must be registered for three months for the law to be effective. The registration is the same database as offered last year for home phone numbers. I registered mine the second week of November and kept the confirmations from the FCC. The link is www.donotcall.gov <http://www.donotcall.gov/> .

Happy Holidays to all!

The new DIGTRX 2.10 was released today, December 17, 2004,
but because of a few small problems I have discovered while using
this latest version in both Windows 98 and Windows XP, I personally
suggest that you keep Version 2.09b running for the time being.

Hello folks,

Anyone that hangs on to there QST's for a time, that would be
willing to either let me borrow or have there 2002 August QST issue??

Looking for an article that was the last part of a discussion.

Ummm, my copy of the Aug. 2002, was passed along to a future ham
some time ago.

contact me at n5zxj@... Subject QST Aug 2002

thanks

Gerald - N5ZXJ

1080. New Digital Mode

Yahoo group: Temple_ARC
Date: 2004-12-20 22:36:40 UTC
From: Charlie Schlieper
Topic: 1080 Message: 1080

Ham Radio software UPDATE:

Hello to all,

I just heard that there is a new digital mode available,
based on MFSK and having Walsh funchtion FEC code
much like MT63. I personally cannot provide anything
on this mode yet, as I have not yet tried it; however, it
is reported that this new mode works better than MT63
during very weak and noisy conditions. It is expected,
for now, to use the same general frequencies for this new
mode as MFSK and MT-63.

The webpage to refer to:

http://homepage.sunrise.ch/mysunrise/jalocha/mfsk.html

1082. A Tip for the new DIGIPAN 2.0

Yahoo group: Temple_ARC
Date: 2004-12-21 14:35:54 UTC
From: Charlie Schlieper
Topic: 1082 Message: 1082

Hello All,

I have discovered that DigiPan 2.0 multi-channel sometimes copys
better out in the multi-channel window than the main selected one
on the left side; however, to better view these multi-channel lines,
go to CONFIGURE, then down to MULTICHANNEL SCROLL,
and select "BY CHARACTER." This gives a much better way of
reading the multi-channel lines, as opposed to default "NO SCROLL."
(No scroll causes all the lines to clear and reset when they reach full.)
I hope this helps others who use the DigiPan program.

Charlie, N5TD

Topic: 327 Message: 1084

Austin SwapNet 12/19/04 de N5MNW, ARO & AARC. Website: www.AustinHams.org

Santa Signal Seekers,

AARC's 2004 Christmas Party was another record-breaker. We had 85 in attendance for the 85th year of AARC affiliation with the ARRL. Coy Day N5OK presented John KG5O with a plaque from ARRL in commemoration.

George Toone WB5FBJ entertained us with his wit and many humorous & seasonal tunes. Muller's BBQ Smoked Turkey, Brisket and sausage was well-received, so were the pot-luck desserts!

The QLF trophy was again taken home by Hugh (Fancy Footwork) NT5O.

Taking table decoration first place was Mitch KD5HCV with a stunning popcicle- stick and electric motor construction.

Many thanks to the volunteers who came early and stayed late to set up and clean the hall. Mitch outdid himself on the party arrangements/door prizes/food.

Thanks to Roger W5WIA and Jeri Wines for reserving the hall and so much more.

I have had -lots- of positive feedback on the party.

AARC dues can now be paid online! It's now easier than ever to renew and/or join the AARC! HYPERLINK "http://www.austinhams.org/ppdues.htm"http://www.austinhams.org/ppdues.htm

If you're not an ARRL member and are considering it, AARC/ARO will apply

$15 towards your AARC/ARO club dues if you sign up for first-time ARRL membership through the club! Take advantage of dual signup, save money, join ARRL and AARC/ARO simultaneously!

Contact John KG5O@... or Jerry N5UJ@... for more details.

i. Student Membership☐Available to any full-time student at a rate one-half (½) that of Full Member.
ii. Senior Member ☐ Available to any person age 65 and older at a rate of three-fourths (¾) that of Full Member.

B. Family Membership☐Available to all persons, in a Full Member's immediate household, who also hold a valid amateur radio license. This membership enjoys all privileges of the Club. Dues will be one-half (½) those of Full Member.

C. Associate Membership☐Available to any person who does not hold an Amateur Radio license, but exhibits an interest in Amateur Radio. This membership enjoys all the privileges of the Club except the rights to vote and to hold office. Dues will be one-half (½) those of Full Member.

i. D. Life Membership

i. Honorary☐Presented to persons so designated by the Board of Directors or by a two-thirds (2/3) vote of the membership present at a Regular meeting. This membership enjoys all the privileges of the Club except the right to vote and to hold office.

ii. Paid-Up Life☐Available to any person who makes advance payment of ten (10) years dues at the current rate then in effect. This membership enjoys all the privileges of the Club according to the club☐s membership categories, provided that the applicable dues for Paid-up Life Membership for the sponsoring Full Member and the Family member(s) must be paid at the same time.

i. iii. Meritorious☐Awarded to any person in recognition of outstanding service to the Club or to Amateur Radio in general. This membership may be

awarded by the Board of Directors or by a two-thirds (2/3) vote of the membership present at a Regular meeting. This membership enjoys all the privileges of Full membership in TARC as described in Article 2.02(A). These Meritorious Life members pay no dues; however, they are subject to any special assessments, as are all members.

Conditions of Membership

2.03 A prospective member shall complete an application for membership and shall present same, with current dues, to the Membership Chairman or the Treasurer for acceptance.

Loss of Membership

2.04 A member shall lose his membership upon failure to renew said membership within sixty (60) days following January 1.

2.05 A member may lose his membership for any of the following reasons:

A. If, while acting as an official representative of TARC, he performs in such a manner as to bring discredit to the Club.
B. If he converts TARC property or facilities to personal use or otherwise demonstrates disloyalty to the Club.
C. If he loses his Amateur Radio license as an action of the courts or the Federal Communications Commission.
D. Upon written motion of five (5) members, the Membership Chairman will investigate any charges made against a member, as specified in A, B, or C above, which could cause him to lose his membership. The findings and recommendations of the Chairman will be made known to the Board of Directors. If the findings warrant, the Board of Directors will cause them to be presented to the membership at the next Regular meeting and a vote will be taken at that time. A two-thirds (2/3) majority of the voting members present will be required to eject a member.

Dues

2.06 TARC dues will be determined from time to time as deemed necessary by the Board of Directors. These dues set by the Board may be repealed by a majority decision by voting members at the next regular club meeting, provided a quorum is present.

2.07 Dues shall be payable on the first day of January each year.

2.08 Individual paid-up lifetime membership dues shall be determined to be a multiple of the annual dues as

approved by the Board of Directors and by the membership. The value of the multiplier shall be ten (10), unless otherwise set by the Board of Directors; however, the multiplier shall not be set at a value less than ten (10).

2.09 New Member's dues shall be prorated as follows: From January 1 to July 1, the annual dues shall be paid in full. After July 1, annual dues for the

remainder of the year will be fifty percent (50%) of the dues for a full year. Dues payable by a renewing member shall not be prorated.

Ham Radio software UPDATE:

Digtrx 2.11 was released Monday, Dec 27, 2004.

WHAT´S NEW: (By - Roland Zurmely, PY4ZBZ)
> Made improvements for automatic file transmission:

> Automatic pieces retransmission:
> - Clicking in a black area of the status bar in the RX-split window,
> corresponding to a piece not received because of some reason,
> transmits a request for the opposite station to select and retransmit this piece >
automatically.
> In the same way that, clicking in a yellow area of the status bar,
> transmits a bad block request: "bbreport.rpt".

> Automatic file retranmission on receiving bab block zero:

> - If the function ARQ is checked (near to the Suspend button) in two
> stations A and B, a special ARQ signal will be transmitted automatically
> by the station A, when this has received from station B, a file with
> a bab block zero or with decoding errors.
> When this ARQ signal is received by the station B, this will transmit
> (or repeat) immediately the last transmitted file.
> This ARQ function also works when a "BBR - * .rpt" file (that contains
> only blocks needed for repair) is received with any other bad block,
> included bad block zero, or with decoding errors.
> This ARQ function is auto-disabled while recording of a split file
> sequence, transmitted with the "Send ALL" button.
> In this case, request for not received pieces must be done using the
> previously explained automatic pieces retransmission.
> ARQ function is also auto-disabled when recording a file while
> decoding another.

> IMPORTANT: the ARQ function should only be enabled in TWO stations
> when there are more than two stations operating in the same frequency,
> to avoid interferences caused by simultaneous automatic transmissions.
> ARQ is a POINT to POINT protocol.

Subject: [amateur_radio] NEW DIGITAL SSTV MODE

Hello,
There is a new digital SSTV mode called DRM (Digital Radio Mondial)
to send pictures and files as well as voice on HF. Software is
available at

http://n1su.us/windrm/windrm-24-dec-04.zip

and it is free for amateur radio usage.
Suggested frequencies are:
7.169
7.173
7.176
7.290
14.236
18.162
21.370
On 20 meter there is more noticable activity.

Subject: Tsunami in Thailand - appeal for help

Dear member or friend of RAST,
As you have no doubt heard, the western coast of Thailand was
devastated by a tsunami (tidal wave) on Sunday morning and as rescue
efforts
continue on Tuesday afternoon the death toll now exceeds 1,000 and is likely
to

rise to over 2,000 as more bodies are recovered from remote areas and islands.
In addition, over 7,500 Thais and foreign tourists are now receiving medical attention.
The Thai government has appealed for donations to assist people in the devastated areas while RAST understands that as far as Thailand's communications needs are concerned, the situation is now under control.
Thai hams are helping to relay information between the affected areas along the west coast in the South to government agencies, mostly on VHF and 40
metres, as well as disseminating news and information over VHF frequencies in Bangkok.
Echolink, too, has played a role in enabling radio amateurs here to relay information to concerned friends and relatives of those holidaying in the affected areas.
I have spoken with our President Mrs Mayuree Chotikul, HS1YL, and to other officers of RAST as to what our society might be able to do to help in the wake of this disaster and, in particular, as to how to respond to
offers of help and support already received from ham friends around the world.
We agree that what is now needed the most is help for the many thousands made homeless by the tsunami and so RAST is now accepting donations and
will pass on all financial support received to the Thai Government which has opened a channel for this. We will, of course, give full credit to the international amateur
radio community and to the individual donors and donor organisations.
The best way to transfer funds to RAST for this purpose is by wire transfer, the details of which follow:
Siam City Bank
Ratchawat Branch No 111
Account Type: Savings
Account Number: 111-2-22688-4
Account Name: RAST
(Full name: Radio Amateur Society of Thailand, under the Royal Patronage of His Majesty the King)

We also ask that all donors send details of their support to dx@... by email or by Fax to +662-321-6443 for our records so that we can acknowledge this and give full credit.
Please help Thailand in this time of need in any way you can, and we encourage you to pass this appeal along to any others whom you feel may be able to help.
Thank you
Sincere 73,
Tony Waltham, HS0ZDX
Vice President,
Radio Amateur Society of Thailand
Under the Royal Patronage of His Majesty the King

i have no doubt about the terrible suffering of the tsunami victims not only in thailand but also in the many other countries that were devastated. i also have no doubts about the good intentions of rast, but i always have doubts about giving distaster relief (and prevention) money directly to government officials and appointees. the red cross is well experienced in these situations, and their character is above reproach. i will donate directly to the red cross:

http://www.redcross.org/

73, john

Ham Radio software UPDATE:

Digtrx 2.12 was released January 4, 2005.

WHAT´S NEW: (info furnished by PY4ZBZ)

> V.2.12
> - Included an option in the popup menu of the TX picture to recodify a
> BBR with redundancy of 40% or 70% (enabled only when the TX picture
> has
> text information about a recent BBR). The current BBR is recodified
> independently of the selected value in Setup, Options, Redundancy for
> BBR.
> If Auto Repair is checked, the new BBR will be transmitted automatically
> after the recodification.

> - Included a " OK! " button that allows to send the precoded message
> " Good copy " in the waterfall.

Download this update via:

1102. VEC Fees Increase

Yahoo group: Temple_ARC
Date: 2005-01-05 15:47:30 UTC
From: Steve Bosshard
Topic: 1102 Message: 1102

Effective January 1, 2005 the ARRL VEC test fee for the new year becomes $14 (this is up from $12 in 2004).

ARRL VE's will continue to be able to retain UP TO $6 from each test fee collected to offset the VE team's out-of-pocket expenses (or submit paid receipts to the VEC for reimbursement). VE teams who retain a portion of the fee are to keep income/expense/receipt records for 3 years.

Retests of a failed element are $14 as are grandfather-upgrade applications processing where no tests are given.

Direct any questions to 800-927-7583 or vec@...

73, Bart Jahnke, W9JJ, ARRL VEC Manager.

i just checked the w5yi website, and they also show a charge of $14, so this is apparantly the going rate. it certainly "pays" to study and pass in the fewest attempts possible.

1104. Worked All Texas Award?

Yahoo group: Temple_ARC
Date: 2005-01-05 16:52:33 UTC
From: john, ke5c
Topic: 1104 Message: 1104

I'm very slowly going to unload Mike a bit by updating the non-Ham Expo portions of the TARC website. Eventually the site will have a different look, not better, not worse, just different. Who knows anything about the "Worked All Texas Award"? Anything at all would be helpful. Thanks!

73, John

John, I am not currently a member but the Worked All Texas Award was started while I was the club president. Not sure what information you want but I will answer anything I can. Just drop me an email with your questions.

1107. Dinner and Program

Yahoo group: Temple_ARC
Date: 2005-01-06 16:24:59 UTC
From: Carolyn Black
Topic: 1107 Message: 1107

You are cordially invited to the TSGARC Dinner and Program,
Monday, January 10, 2005

DINNER: 6:00 - 7:00 p.m. - Soup, Beef Stew, Cornbread, Desserts and Ice Tea.

NEW for 2005!

RAFFLE: Cracker Barrel Gift Certificate, $40. Value. Tickets $1 each or 6 for $5.

Also 2 free door prizes, each consisting of 4 Desserts at Johnny Carino's in Waco.

PROGRAM: 7:00 - 9:00 p.m. - Rodney Baden, K5YKC, will present a program about the National Incident Management System (NIMS).

NIMS provides a consistent nationwide template to enable all government, private sector, and nongovernmental organizations to work together during domestic incidents.

The TSGARC clubhouse is located at 3292 Speegleville Rd. in Waco, halfway between Highway 6 and Highway 84.

From: Steve Bosshard
Topic: 1108 Message: 1108

I just spoke with Bruce Evetts from the Texas Early Day Tractor and Engine association to confirm the last weekend in June for the Temple Amateur Radio Club field day activities and all is GO.

We need to do some clean up and preparation, lay out cables, and get everything ready prior to Friday noon. Friday noon we can start actual setup, and then Sunday afternoon and Monday will be clean up.

We have access to refrigerators, BBQ pits, and a nice covered pavillion for all weather operation.

I am hoping to have a GOTA station call sign W5T, plus a Morse station and a Phone station, and take advantage of the extra score opportunities available.

Best 73,

Steve

Subject: [DILLO] TX VHF-FM Society Meeting 1-15-05

The Texas VHF-FM Society is having it's Wintercom meeting in Arlington, TX
next Saturday 1-15-05. You can check out the details on their website:
http://www.wintercom.org/. I hope all of you can make it to Arlington next
weekend for WinterCom.

Bruce N5XC will be giving a demo at 9am of his new digital planetarium. ICOM will have some new toys to check out and a meeting at
10:30 on their DStar products. Please plan to stay for the business meeting. It starts at 1:30. There will be several items presented for members to vote on.

See you in Arlington next Saturday!

George

1116. Austin Swap Net

Yahoo group: Temple_ARC
Date: 2005-01-10 18:45:45 UTC
From: Steve Bosshard
Topic: 327 Message: 1116

Austin SwapNet 01/09/05 de N5MNW, ARO & AARC. Website:
www.AustinHams.org

2005 Dalmatians,
Stuart DeLuca, KC5CFQ became a silent key last Friday. He was very
active with
Travis County and National REACT, as long-time officer and recent editor
of the
"REACTer" newsletter publication. A "Celebration of Life" will be held
later in January.

Lori and I spent four terrific days with our friends Charlie (KC5NKK)
& Patty Land.
They live just north of San Antonio, so their place made a great
launching point for
the Saturday Swapmeet.

Which brings me to comments on Royce's great show at Little Joe's.
The hall was
filled with the usual goodies & junk but this time, more of it walked
out with someone
else than who brought it in! Mike and Beth's "Jubilee Enterprises" was
very busy for
most of the show. Mike said 11:30 was the first time it slowed down
enough to do
some shopping of his own!
Motivated buyers, excellent door prizes and an on-site snack bar made
for a
good experience.

DX-ers provide emergency comms for Tsunami relief:
http://www.despardes.com/NewsExplorer/latest/4.html
(de Rick K5FNI)

The January 24 CTDXCC program will be a primer on HF/DX propagation.
The program for the February 28 meeting is an introduction to the TR-LOG
contest
logging program.
Both of these programs are targeted to newer hams and non-CTDXCC
members. All
are welcome. Meetings are at 6:45 PM at the Austin History Center next
door to the
main public library downtown.
These programs are intended to help prepare for open house operations
for the ARRL
DX SSB contest at N3BB and W5KFT the weekend of March 5. Again, all are

welcome. For more info, see www.ctdxcc.org. (De Robert K5PI)

Skywarn Advanced spotter training schedule and info has been updated:
www.utexas.edu/depts/grg/kimmel/SKYWARN2005.html

New on the www.AustinHams.org site is a nomination button for
"Ham of the Month". Nominate and describe who -YOU- think ought to be
AARC's next HOM.

AARC dues can now be paid online! It's now easier than ever to renew
and/or
join the AARC! http://www.austinhams.org/ppdues.htm

If you're not an ARRL member and are considering it, AARC/ARO will
apply
$15 towards your AARC/ARO club dues if you sign up for first-time
ARRL membership through the club! Take advantage of dual signup, save
money,
join ARRL and AARC/ARO simultaneously!

1118. New "OLIVIA" MFSK mode

Yahoo group: Temple_ARC
Date: 2005-01-12 00:17:22 UTC
From: Charlie Schlieper
Topic: 1118 Message: 1118

Ham Radio software UPDATE:

A new hybrid mode of MFSK, called "Olivia" was developed for weak signal communications. MFSK (Multi-Shift Frequency Keying) has a fairly constant envelope, allowing the transmitter to work near maximum power. The MFSK mode, in general, passes well through the distortion vairations of the ionosphere.
The default setting for "Olivia" is 32 tones, each spaced by 31.25 Hz, at the rate of 31.25 baud. This results in about 1000 Hz bandwidth. You can also select 2, 4, 8, 16, 32, 64, 128 or 256 tones, with bandwidths of 125, 250, 500, 1000 or 2000 Hz. Olivia was named after Pawel (SP9VRC) Jalocha's daughter. More information is provided at the website below.

1123. What so disappointing about VHF

Yahoo group: Temple_ARC
Date: 2005-01-15 16:41:50 UTC
From: James
Topic: 1123 Message: 1123

Today I was at Ham breakfast, and after leaving I came upon a train derailment, I got on the local repeater I called out and No One answered me. The train derailment happened in Nolanville, TX. What's wrong with VHF? Just because cell phones are on every hip and in every pocket we don't monitor are even care about listening to a repeater or even simplex.

I tried 5 different repeaters on a Saturday morning and no one answer me. This is why I'm going to HF in the Truck.

1125. PreFind Version 3.1.0

Yahoo group: Temple_ARC
Date: 2005-01-16 23:43:37 UTC
From: Charlie Schlieper
Topic: 1125 Message: 1125

Ham Radio software NOTE.

Prefind version 3.1.0 is a Ham Radio utility program
that quickly searches a database of more than 2200
DXCC prefixes and countries and gives the location.
It also calculates the distance, azimuth, longitude and
latitude between two 6-digit grid squares, and shows
it on a world map. From your fixed QTH reference,
moving the mouse pointer to any world location lets
you select a distant point without knowing it's grid-
square. Right clicking on that point, and choosing
"paste locator into Target box" draws a line between
your station and the target. Then click on "Calculate"
to obtain the distance in both km and miles, plus the
bearing and other information. This is a neat utility
program for the HF DX'er, and is FREE.

The TSGARC now has an active webcam that can be viewed on the internet showing the clubhouse interrior including the studio. You can access this by going to: http://home.hot.rr.com/atv1/webcam.html This will allow you to watch live (slo-frame) video when it is in operation.
We will be operating this live during the nets so those WITHOUT ATV will be able to view what is on slo-scan, speakers, programs and slide shows which are being transmitted from the studio. Turn the webcam on and join us on any or all of the nets and WATCH the hams you are talking to. Also check the webcam 24/7 to see a variety of pictures taken by the slo-scan group and the most recent TSGARC dinner/program.
More info to follow.

1129. Spoofing BEWARE

Yahoo group: Temple_ARC
Date: 2005-01-18 18:06:12 UTC
From: john, ke5c
Topic: 1129 Message: 1129

This is the second attempt at spoofing my eBay account information that I have received in the past week. I have also received two emails allegedly from banks at which I do not have an account, so spoofing is alive and well. Of course, eBay and other businesses never send you emails asking you to do stuff like this, and if you click the link supplied, you end up at "http://signin.ebay.com.sawcgi4.us/ws/eBayISAPI.dll?SignIn". Cute, but eBay only has "com" domains, not "us" domains, so this is another tipoff. I reported the earlier attempt which originated in Romania, and it's still in business, so I guess eBay and other companies have trouble turning these guys off, especially when they are overseas. Again, heads up and be careful in cyberspace!

Dear eBay member

We recently noticed more attempts to log in to your eBay account from a foreign IP address and we have reasons to believe that your account was compromised
by a third party without your authorization.

If you recently accessed your account while traveling, the unusual log in attempts
may have been initiated by you.
However, if you are the account holder please verify that, clicking on the link below,
fill the form and then submit. In this way we will verify your identity.

http://signin.ebay.com//aw-cgi/eBayISAPI.dll?VerifyIdentity&ssPageName

The log in attempt was made from:
IP address: 184.158.158.98
ISP host: 184.158.158.98

If you choose to ignore our request , your account will be suspended until you will verify your identity
.

We ask that you allow at least 72 hours for the case to be investigated and we
strongly recommend not to make any changes to your account in that time.

If you received this notice and you are not the authorized account holder, please be aware that it is in violation of eBay policy to represent oneself as another eBay user. Such action may also be in violation of local, national, and/or international law. eBay is committed to assist law enforcement with any inquires related to attempts to misappropriate personal information with the intent to commit fraud or theft. Information will be provided at the request of law enforcement agencies to ensure that perpetrators are prosecuted to the fullest extent of the law.

*Please do not respond to this e-mail as your reply will not be received.

Thanks for your patience as we work together to protect your account.

1131. RE: [Temple_ARC] Spoofing BEWARE

Yahoo group: Temple_ARC
Date: 2005-01-18 21:23:00 UTC
From: Steve
Topic: 1129 Message: 1131

Attacks of these types are more commonly known as "phishing". Phishing is a type of email fraud and has been around a little over a year. The most common use of this is via an email from a known "bank". Even though the connecting link in the text of the message looks legitimate enough, the actual HTML coding behind the link will take you other places. All one has to do is to click on the link, which looks real but is a fake and enter all your personal information. Banking institutions world-wide have stated that they never ask for any personal information via email.

A good rule of thumb is, if you don't trust it, delete it, don't even read it.

Yahoo group: Temple_ARC
Date: 2005-01-20 21:13:58 UTC
From: john, ke5c
Topic: 1133 Message: 1133

when my old watch got cranky, i replaced it with a casio radio controlled (time updated) model. five times from midnight to 4 AM on the hour, this watch listens for the WWVB time signal and, if it can correctly receive it, corrects itself to the current time. this technology has been around for some time, a la the old heathkit most accurate clock. however, packaging the technology into a wrist watch is neat. this tweaked my curiosity, and i found a few interesting facts and websites.

the wavelength of 60 kHz is 5000 meters, so a 1/4 wave antenna would be 1250 meters tall - well over a half mile.

the ferrite antenna in my watch:
http://www.ke5c.net/casio/back3.jpg

the time packet is sent at one bit per second and requires one minute to completely receive.

interesting stuff (antennas, transmitters, etc.) about WWVB:
http://www.boulder.nist.gov/timefreq/stations/wwvb.htm

Subject: [PWF] FCC officials confirm Powell to resign Friday

FCC Officials Say Powell to Resign
January 21st, 2005 @ 7:46am
WASHINGTON (AP) - Federal Communications Commission Chairman Michael Powell plans to resign Friday, FCC officials confirmed, ending what's often been a controversial tenure as he tried to push the telecom and media industries into an increasingly deregulated world that some lawmakers, companies and consumer groups didn't like.

The news, first reported on The Wall Street Journal's editorial page Friday, was something of a surprise coming just one day after President Bush's inauguration and with some very hefty issues yet to be dealt with by the FCC. Those issues include how to treat burgeoning Internet phone services as well as how to overhaul the Universal Service Fund, a federal subsidy program under financial pressure. The Wall Street Journal is published by Dow Jones & Co. (DJ), publisher of the newswire used for this report.

Rumors have circulated for months that Powell, who has been on the FCC since President Clinton appointed him as a commissioner seven years ago, would step down. Recent conventional wisdom had him leaving in the spring after at least some of these issues were dealt with.

The FCC is a five-member commission, with a majority representing the party of the president, in this case, Republicans. Possible successors discussed have included current Republican Commissioner Kevin Martin.

1135. Temple Fire Department CERT program

Yahoo group: Temple_ARC
Date: 2005-01-21 20:13:49 UTC
From: Mesecke
Topic: 1135 Message: 1135

The Temple Fire Department is looking for volunteers for
CERT (Citizens Emergency Response Teams). The first meeting
will be Monday January 31st at the Fire Training Center on
South 31st Street. Contact Deputy Fire Chief Francisco Corona
at 298-5682 if interested in volunteering. The Temple Daily
Telegram should be running a notice on this between now and
Monday.
The CERT program consists of 20 hours of training in emergency
response. Its purpose is to train members to give immediate aid
to victims, help professional first responders when they arrive and
organize spontaneous volunteers. TFD wishes to form seven teams,
one for each fire station and each team needs 7 to 12 members.

1137. CERT Training update

Yahoo group: Temple_ARC
Date: 2005-01-24 14:34:05 UTC
From: Mesecke
Topic: 1137 Message: 1137

I realized I did not include the time in my first message.

The first meeting is tonight at 6 p.m. until 7:30 p.m. at
the Fire Training Center on South 31st Street in Temple.
This is next to AutoZone.

This weekends train derailment right next to the
WhistleStop playground demonstrates the potential
need for the CERT program. Luckily the tank cars were
empty but it reinforces the need to be prepared.

1138. CERT training correction

Yahoo group: Temple_ARC
Date: 2005-01-24 19:45:45 UTC
From: Mesecke
Topic: 1138 Message: 1138

There is a reason I am not a secretary.

I posted the time correctly this morning but I
looked one week ahead at the calendar. I said
the meeting was tonight but today is only the
24th, not the 31st.

So, the first meeting is Jan 31st at 6 p.m.

I'm sure it will be in the paper again and it is
also posted on the Temple access channel
on Time Warner cable channel 10.

I guess it is better for me to be early than late.

Myron

1139. CERT - What is the Danger

Yahoo group: Temple_ARC
Date: 2005-01-25 02:21:59 UTC
From: Anthony Mikulastik
Topic: 1139 Message: 1139

I hope all understand the dangers of being a First Responder. A wind shift at a chemical spill can kill you in seconds. A drunk runs you down as you direct traffic. As a volunteer, the City of Temple would have no responsability to take care of you or your family if you are injured or killed. Can you aford to be off work to recover from a serious injury that is not covered by insurance? Can your family continue to live at their current standard of living if you are killed? I guess it is all a matter of what is most important to you. Hope all who take part stay safe and have a good time hanging out at a few training meetings. The good news is that your effort will most likly get some Gov. Grant dollars for Temple, TX.

73,

Anthony, WB5TTY

1140. Safety concerns

Yahoo group: Temple_ARC
Date: 2005-01-26 03:29:35 UTC
From: Mesecke
Topic: 1140 Message: 1140

Some comments were made about personal safety in regards to participating in the Citizen Emergency Response Teams that the Temple Fire Department is hoping to implement.
These were valid and important concerns. I would not want anyone to become involved in any program where they did not know or understand the duties and risks associated with it. The first meeting would be a good way to begin learning about CERT. I will be attending the first meeting to learn more.
The reason I am interested in this program has to do with a project I did for my Geographic Information Systems classes. I collected data on the chlorine spill last June in San Antonio and using EPA software generated the chlorine gas plume from that spill. I then overlaid the plume from that event onto a map of Temple to show how Temple could be affected by a similar spill. What is interesting to me is I chose as a location for the spill the tracks along the Santa Fe depot, only yards from the location where the tank cars derailed last Saturday. Luckily those tank cars were empty and the tanks not damaged.
My project also showed that all but one school in the Temple ISD is located within 1 mile of a railroad track. Most of the medical facilities in Temple are also within 1 mile of railroad tracks. In San Antonio, people 10 miles away at Sea World were affected by the chlorine plume. And that plume was created from an accident where only half of the tank car leaked out.

1146. FW: [ICOM_LMR] Yahoo use of "web beacons" *** Important***

Yahoo group: Temple_ARC
Date: 2005-01-28 19:56:46 UTC
From: Steve Bosshard
Topic: 1146 Message: 1146

-----Original Message-----
From: jcoupejr [mailto:JCoupejr@...]
Sent: Friday, January 28, 2005 2:06 PM
To: ICOM_LMR@yahoogroups.com
Subject: [ICOM_LMR] Yahoo use of "web beacons" *** Important***

Hi Everyone,

Recently, it came to my attention that Yahoo is now using Web Beacons, a small spy device to track your movements on the web for Yahoo! I know I value my privacy and I hope you do as well. Printed below is information on the web beacons and how you can tell Yahoo not to use them on your machine. I strongly suggest that you follow the directions outlined below and "opt out" of the web beacons.

Jack Coupe

Yahoo is now using something called "Web Beacons" to track Yahoo Group users around the net and see what you're doing and where you are going - similar to cookies. Yahoo is recording every website and every group you visit.

Take a look at their updated privacy statement:

http://privacy.yahoo.com/privacy

About halfway down the page, in the section on cookies, you will see a link that says web beacons. Click on the phrase web beacons.

That will bring you to a paragraph entitled "Outside the Yahoo Network." In this section you'll see a little "click here to opt out" link that will let you "opt-out" of their new method of snooping.

Once you have clicked that link, you are exempted.

Notice the "Success" message on the top of the next page. Be careful because on that page there is a "Cancel Opt-out" button that, if clicked, will *undo** the opt-out.

1147. TESSA 2005 Texas Storm Conference

Yahoo group: Temple_ARC
Date: 2005-01-28 23:32:02 UTC
From: ctsslampasas@a1cmugs.com
Topic: 1147 Message: 1147

What: TESSA 2005 Texas Storm Conference

Where: Bob Duncan Community Center, 2800 S. Center St., Arlington, Texas

When: Saturday, February 26, 2005, 8:00 AM - 5:00 PM

The Texas Severe Storms Association (TESSA) and the National Weather Service (NWS) will collaborate for the 2005 Texas Storm Conference on February 26 in Arlington, Texas. Speakers from TESSA, NWS, the Storm Prediction Center and the National Severe Storms Laboratory will deliver presentations about severe weather. Topics include severe weather safety, storm spotter training and in-depth discussions on tornado meteorology.

New this year is the first TESSA Super Storm Spotter Session, which will provide the highest level of training available to storm spotters anywhere in the country. The session will be presented by Ft. Worth NWS Warning Coordination Meteorologist Gary Woodall. Mr. Woodall's presentation is titled, "Visual, Environmental, and Radar Characteristics of Severe Storms." The environmental ingredients required for severe storms and methods for spotters to identify the presence of these ingredients will be discussed.

The conference featured speaker is Dr. Louis Wicker, a research meteorologist at the National Severe Storms Laboratory, in Norman, Oklahoma. Dr. Wicker's research produced one of the first computer simulations that simultaneously contained both the severe storm and the tornado, and he was a principle investigator in the National Science Foundation sponsored field program "Verification of the Origins of Tornadoes Experiment" (VORTEX). His latest computer simulation was presented in the 2004 "NOVA" television program titled, "Searching for the Supertwister."

Additional presenters include Alan Moller of the National Weather Service in Ft. Worth, a pioneer in the development of the national storm spotter training system; Roger Edwards, Storm Prediction Center forecaster and veteran storm chaser, and Martin Lisius, Chairman and founder of the Texas Severe Storms Association.

"The Texas Storm Conference is a natural partnership between TESSA and the National Weather Service, since both groups are committed to severe weather education," said Martin Lisius, TESSA Chairman. "It's appropriate that an event of this quality and magnitude be held in Dallas-Ft. Worth, the largest metropolitan area in Tornado Alley, an area that experiences the effects of severe weather on a frequent basis. Over the years, Dallas-Ft. Worth has become the cradle of storm spotter training techniques utilized nationwide. The positive impacts that come from an event like this spread far beyond Texas."

The 2004 conference attracted nearly 300 attendees, including storm spotters, storm chasers, emergency management officials, forecasters, educators, students and members of the general public from Texas, Oklahoma, Kansas, Arkansas and Louisiana.

The Texas Storm Conference will take place at the Bob Duncan Community Center in Arlington, Texas on Saturday, February 26. The Super Storm Spotter Session will begin in the morning and will be followed by additional presentations in the afternoon. The conference is free and open to the public. Seating is limited to 500.

Super Storm Spotter window decals and T-shirts will be available at the TESSA table. Vendors will be on-hand to sell their goods including books, software and videos. Door prizes will be given away to attendees. Lunch will be available for purchase at the conference. The location of the annual "unofficial" post-conference dinner will be announced at the event.

Detailed information about the event, including an agenda and directions to the meeting, can be viewed on-line at www.tessa.org.

January 29, 2005

FOR IMMEDIATE RELEASE

Temple Amateur Radio Club's

Ham Expo Is April 30, 2005

Ham Expo, the twice-yearly Amateur Radio swapfest sponsored by the Temple (TX) Amateur Radio Club, will take place Saturday, April 30, 2005. The site will be held the Bell County Expo Center in Belton, Texas. The doors open at 7:00 a.m., and the event ends at 3:00 p.m. Admission is $1.00 per person.

Bell County Expo Center is located at 301 W. Loop 121 in Belton, Texas. From Interstate-35 take Exit 292. Go west on Loop 121 for 1/4 mile to the Dome.

The talk-in frequency is 146.820- (PL 123.0).

Amateur Radio operators, shortwave listeners, computer hobbyists, and other electronics enthusiasts come to Ham Expo from across the South, Southwest, and beyond.

The 2,000 attendees will look for bargains on communications gear and accessories, according to Mike LeFan, WA5EQQ, event chairman. This event will feature more than 30 commercial vendors from Texas, Louisiana, Oklahoma, Missouri, Mississippi, and elsewhere. These commercial dealers will showcase the newest Amateur Radio equipment, scanner radios, computers, computer accessories, batteries for all forms of electronics, cables and connectors, and other accessories.

About 200 individuals in the flea market segment of Ham Expo will be selling their "pre-owned" surplus electronic bargains inside the Expo Center's large arena area, as well as on the parking lot outside (weather permitting).

Exams for all classes of Amateur Radio licenses will be administered onsite at 1:00 p.m. The cost is $12.00 per exam. Information on the location will be available at the registration desk.

Many attendees make a weekend of Ham Expo, arriving on Friday in RVs and camping on the parking lot to enjoy tailgate parties with both old and new friends.

Ham Expo is accessible to persons with handicaps. Dozens of door prizes will be given away. More information is available on the Internet at www.tarc.org for those with Internet access. You may send e-mail to expo@... or telephone Mike LeFan, WA5EQQ at (254) 773-3590 (10:00 a.m. - 9:00 p.m. Central Time, Monday-Saturday).

From: john_ke5c
Topic: 1159 Message: 1159

You may now renew your TARC membership by paying your 2005 dues online using your credit card or PayPal. The funds are directly and immediately deposited into TARC's PayPal account. The club roster page will tell you if your payment for 2005 is due and provides the link for you to follow to pay online. Please allow a day or two for the treasurer to update the member database once you have paid. As soon as that is done, your paid status will be reflected on the roster page.

1164. WinDRM Updt 3-Feb-05 & ISS Note

Yahoo group: Temple_ARC
Date: 2005-02-05 18:02:14 UTC
From: Charlie Schlieper
Topic: 1164 Message: 1164

Ham Radio software UPDATE:

WinDRM (Win-Dream) latest version was released 03-February-05.
It seems to have some promise of being a worthwhile digital transfer program. The latest update increased the RX file buffer size and improved BSR (Bad Segment Report) operation. I believe WinDRM requires two soundcards on Windows 98, but only one if using WinXP. Your ID.WAV file should be 48kHz sample rate. Download the TUNE dot WAVE file (434K) which is required for the tune button. WinDRM is made for both AUDIO and FAST DATA over HF SSB, but could be used in VHF/UHF FM modes as well. For those bringing this program up for the first time, SPA stands for "Show Pic Anyway."

The WinDRM reflector is at:
http://groups-beta.google.com/group/WinDRM

Download WinDRM at: http://n1su.us/windrm/download.html

ISS NOTE:
It appears now that the ISS radio has reset itself, and is currently back on the standard 145.80 downlink (145.99 uplink) for packet operation.

1165. Followup Report WinDRM ham pgm

Yahoo group: Temple_ARC
Date: 2005-02-06 02:58:43 UTC
From: Charlie Schlieper
Topic: 1165 Message: 1165

In experimenting with WinDRM, I have found out that this program will work with Windows 98se, the second edition of Windows 98. This should be good news for those of you still using some older systems for ham radio.

Depending on the type of soundcard in your system, you may have to add a "-p" switch on the end of the exe line when using Windows 98se. To do this, right click on your desktop shortcut you created, go down to properties, and add a "-p" switch on the target line. It should look like this: (C:\WinDRM\windrm.exe -p) Note that a space is added between the exe and the -p.

One Windows 98se system didn't require the switch to work! There is a close-out error that Windows 98se produces, but ignore it. The program seems to work fine otherwise. If you have Windows 98 first edition (4.10.1998) instead of the second edition (4.10.2222), then WinDRM may not work. I have exchanged some very high quality pictures using WinDRM on both Windows 98se and Windows XP.

You have the option in WinDRM of adding three custom WAVE files, named g.wav, b.wav, and id.wav. I use a TEXT ID for g.wav, a CW ID for the id.wav, and another option for the b.wav. Hope you have fun experimenting with WinDRM.

1166. Field Day/ "Youth Element" /Tech Class Training Musings

Yahoo group: Temple_ARC
Date: 2005-02-07 04:10:53 UTC
From: Tom
Topic: 1166 Message: 1166

TARC
Noticed in the recent ARRL News Letter that there are some rule changes for Field Day 2005 which encourage "youth" participation by awarding bonus points to those stations. Might be a good time to encourage groups such as the local Boy Scouts troops to get involved in the training classes that Charlie will be starting in March. For the old TARCers who have possibly been down that road before,
Wudcha Think?
73s
Tom Olsen
kc5kxs

"In addition, Field Day 2005 will introduce a new *"Youth Element" bonus* category (Rule 7.3.15). Clubs or groups operating in Class A, C, D, E or F now can claim *20 bonus points--up to a maximum of 100--for each person aged 18 or younger, who completes a valid Field Day contact. Single-operator Class B stations can earn a 20-point bonus if the operator is age 18 or younger.* Two-person Class B setups can claim a 20-point bonus for each operator age 18 or younger, for a maximum of 40 points. The maximum number of participants for Class B entries remains at two.

Another rule change clarifies that Get On The Air (*GOTA*) stations--instituted a few years ago to encourage new or comparatively inexperienced operators to gain operating practice--use the same exchange as the "parent" station. The maximum transmitter output power for GOTA stations is 150 W, and GOTA stations may only operate on the Field Day HF bands.

Free transmitters do not count toward a group's total, and GOTA stations and free VHF stations for Class A entries do not qualify for bonus point credits." {AARL Letter Vol 24, No5 February 4, 2005)

Peter I
Press Release #11
Date: February 6, 2005
From: Team co-leaders:
Ralph Fedor, KØIR and Bob Allphin, K4UEE
Peter I Team on the way to Punta Arenas!
FOR IMMEDIATE RELEASE
The Peter I Dxpedition team members begin their five-week long journey tomorrow, Monday February 7th. They will assemble in Punta Arenas, Chile as previously announced.
The last month has been full of last-minute changes. Our original boat could not be made ready in time, it was delayed four months and is still not ready to sail -- and we learned that news less than a month ago. The decision was made to continue the effort for 2005 and not postpone. After scores of phone calls, faxes and other scrambling we were able to contract with another vessel, an offshore supply vessel named the "Cavendish Sea" <images/cavendishportada.jpg> . We have also contracted another helicopter <images/Bell407.jpg> and a very experienced pilot -- and we should be able to hold to the most recently announced schedule. We are confident the new vessel and helicopter are mission-capable. The team will be cramped and more uncomfortable, but we are up to the task.
We will be underway from Ushuaia, Argentina on Friday, February 11th if all goes well. Depending on weather and sea conditions we expect to be on Peter I about February 17-18th.
The Peter I DXPedition will be on the ice for two weeks and hope to make 100,000 contacts.
Please follow our progress on our website: www.peterone.com <index.htm>
And special thanks to all of our sponsors, including Corporate, DX clubs, Individuals and DX Foundations. The NCDXF is a premier sponsor of the Peter I DXpedition-2005.
This is a huge undertaking and very, very expensive. The team members are funding 74% of the total cost and need your help with the remaining expenses. Your contribution will be very much appreciated. Send contributions to either: K4UEE, F2JD, JA1ELY or ZL2AL (check the website for an easy-to-use donation form <contribute.htm>).

Area Wide Special Emergency Net

On Wednesday, February 23, 2005, an Area Wide Special Emergency Net will be held on the W5BEC 147.140 repeater, +123 tone in place of the W5TSG Emergency Relay Simplex Net and the W5TSG Traffic and Training Net next week. This net will begin at 7:30 p.m. and run until the final check in has been taken.

We urge all amateur radio operators to check in for the purpose of gathering information for Joe Dorn, W5VEX, Trustee of the 147.140 W5BEC repeater and the Texas State Guard.

In lieu of comments, the trustee has asked that the following information be given as you check in:

1.. Call sign
2.. Name
3.. Mobile or base unit
4.. Type of antenna used to hit this repeater
5.. Power setting
6.. Affiliation with club, TXSG, Emergency Management, Red Cross or other entity
The following is an excerpt from N5ZXJ's Central Texas Area Repeater Directory. This site is maintained and owned by Gerald L. Richmond, N5ZXJ www.n5zxj.us

W5BEC, 147.140 PL 123.0 Hz., Bell County Reservist Group & ARES. Wide Area Repeater for Central Texas. From 1680 Feet AGL, this repeater covers more than 23 counties or about 120 miles radius of Central Texas. Located on a 1924 foot TV Tower 2 miles east of IH-35. This is the Bell County Reservist & ARES Repeater that supports the Surrounding areas & Counties in any Emergency Communications need via Amateur Radio Operators. The repeater is also connected to Echo-Link. During Severe Weather events, this repeater is connected directly to the Fort Worth Office of the National Weather Service via W5BEC-R ID # 99000 or N5ZXJ-R ID # 1947.

Thanks in advance for your participation and to Gerald N5ZXJ and Joe W5VEX for bringing this idea to the TSGARC to further the goal of extended emergency coverage.

Carolyn Black, KD5GLM, TSGARC Secretary kd5glm@...

1182. WinDRM 19-Feb-05 Update

Yahoo group: Temple_ARC
Date: 2005-02-20 17:01:22 UTC
From: Charlie Schlieper
Topic: 1182 Message: 1182

Ham Radio software UPDATE:

The latest version of Windrm is "Windrm-19-feb-05-1806a.zip" (346k)

Download at: < http://n1su.us/windrm/download.html >

> Notes about the 19-Feb-05 version release-notes.txt:
> WinDRM 19-Feb-05 18:06 Release
> Notes updated 19-Feb-05 by N1SU
> 19-Feb-05 18:06 New QAM-4 option for use during poor band conditions
> Use of QAM-4 produces a robust waveform that is more tolerant of QRM and
> other noise. Transfer rates are approximately 40% slower using the
> default options with QAM-4, however the reduction in speed can be
> mitigated by using the "Speed" options for QAM-4 - click the Speed button,
> then QAM-4. This will set Mode A DRM waveform - MSC protection option has
> no effect for QAM-4. Mode A is preferable for use under all circumstances
> except when band conditions are suffering.

Enjoy Ham Radio!

Hello !!

Please forward this to the members of your HAM radio club. If you have any questions, please feel free to email me.

Thank you,

Rene'

<http://kxxv.com/inside/talentpics/andyWallacesmall.jpg>

Andy Wallace / WX5ACT, chief meteorologist for KXXV-TV News Channel 25, will be our guest speaker on March 12, 2005 at 7:00 p.m.

Mr. Wallace worked with the National Weather Service Forecast office in Norman, OK as a weather radio operator, was a weekend weather forecaster at a television station in his hometown of Joplin, MO and a Temple, TX television station before going to KXXV-TV News Channel 25.

Mr. Wallace is a HAM Radio operator and loves to storm chase. He was voted "Favorite TV Personality" in 2001 and 2002. To learn more about Mr. Wallace, please visit http://kxxv.com/category.cfm?ID=124 and we look forward to seeing you on March 12, 2005 !!

73's for now my friends!

1187. Area Wide Special Emergency Net

Yahoo group: Temple_ARC
Date: 2005-02-22 13:30:16 UTC
From: Carolyn Black
Topic: 1180 Message: 1187

Area Wide Special Emergency Net

On Wednesday, February 23, 2005, an Area Wide Special Emergency Net will be held on the W5BEC 147.140 repeater, +123 tone in place of the W5TSG Emergency Relay Simplex Net and the W5TSG Traffic and Training Net next week. This net will begin at 7:30 p.m. and run until the final check in has been taken.

We urge all amateur radio operators to check in for the purpose of gathering information for Joe Dorn, W5VEX, Trustee of the 147.140 W5BEC repeater and the Texas State Guard.

In lieu of comments, the trustee has asked that the following information be given as you check in:

1.. Call sign
2.. Name
3.. Mobile or base unit
4.. Type of antenna used to hit this repeater
5.. Power setting
6.. Affiliation with club, TXSG, Emergency Management, Red Cross or other entity
The following is an excerpt from N5ZXJ's Central Texas Area Repeater Directory. This site is maintained and owned by Gerald L. Richmond, N5ZXJ www.n5zxj.us

W5BEC, 147.140 PL 123.0 Hz., Bell County Reservist Group & ARES. Wide Area Repeater for Central Texas. From 1680 Feet AGL, this repeater covers more than 23 counties or about 120 miles radius of Central Texas. Located on a 1924 foot TV Tower 2 miles east of IH-35. This is the Bell County Reservist & ARES Repeater that supports the Surrounding areas & Counties in any Emergency Communications need via Amateur Radio Operators. The repeater is also connected to Echo-Link. During Severe Weather events, this repeater is connected directly to the Fort Worth Office of the National Weather Service via W5BEC-R ID # 99000 or N5ZXJ-R ID # 1947.

Thanks in advance for your participation and to Gerald N5ZXJ and Joe W5VEX for bringing this idea to the TSGARC to further the goal of extended emergency coverage.

Carolyn Black, KD5GLM, TSGARC Secretary

1188. New Section Managers Start April 1 in Arkansas, North Texas and Arizona

Yahoo group: Temple_ARC

From: john, ke5c
Topic: 1188 Message: 1188

http://www.arrl.org/news/stories/2005/02/23/100/

New Section Managers Start April 1 in Arkansas, North Texas and Arizona

NEWINGTON, CT, Feb 23, 2005--The ARRL North Texas, Arkansas and Arizona sections will be getting new Section Managers this spring. Ballots cast in the two contested races of the current Section Manager (SM) election cycle were counted and verified February 22 at ARRL Headquarters. New terms of office for successful candidates begin April 1.

In the North Texas Section, Tom Blackwell, N5GAR, outpolled incumbent SM Roy Rabey, AD5KZ, 853 to 586. Rabey has served as SM since 2003. A resident of Dallas, Blackwell has served as State Government Liaison for eight years under previous SMs. He has had experience working on the Texas Amateur Radio antenna (PRB-1) law and with the US ambassador to a World Radiocommunication Conference. Blackwell also authored the original petition calling on the FCC to establish a new rule (?97.205[g]) governing repeater operation.

1189. VP6TC may soon be no more.

Mike and I have cleared some old and unused clutter, tried to make the navigation more consistent, and added a calendar. We're sure the calendar will have some bugs. If you have an event to add, please send your information to me or Mike Lefan mlefan@... or Tom Olsen, Secretary, tomolsen@....

1194. TARC calender clarification

Yahoo group: Temple_ARC
Date: 2005-02-26 16:29:29 UTC
From: John Dvoracek
Topic: 1194 Message: 1194

The purpose of the website calendar is to have a central repository of TARC activities, especially for newcomers or passersby. Thus, the website calendar will show events which are direct TARC activities or in which TARC *as a club* is at least somehow involved. At this time there is no visual way to distinguish a TARC event from a general ham event on the website calendar, and the idea is to maintain the website calendar as an easy to look at page which quickly shows TARC activities without having to sort through each entry. Other events of general ham interest such as hamfests (other than Belton of course), other club meetings, area nets, etc., should be posted on the TARC reflector calendar. Thanks!

TARC website calender:
http://www.tarc.org/ and select "Calendar" - TARC events, no email reminders, public web access

TARC reflector calender:
http://groups.yahoo.com/group/Temple_ARC/cal - all events, email reminders, must be a Yahoo and a TARC reflector member.

Joining Yahoo and the TARC reflector - http://groups.yahoo.com/group/Temple_ARC/ - is easy, however only group members can post or add to the calendar. This prevents the spam robots from polluting the reflector with advertisements for everything from free loans to paid love. This morning three junk mail messages have already been bounced.

73, John
co-webmaster and reflector co-moderator (different keystrokes for different folks)

1200. A piece of telegraph history!

Yahoo group: Temple_ARC
Date: 2005-03-01 01:15:53 UTC
From: John Dvoracek
Topic: 1200 Message: 1200

I saw a Vibroplex Double Lever on eBay in pieces. The seller was an incredbly fast shipper, and the key arrived WITH ALL PARTS except the three feet. Those may have simply deteriorated and been discarded when the key was disassembled with the intent of replacing them. I am going to ask the very nice seller if the feet might be around, however. I wish it had two weights, but I think it is going to slow down pretty well with just the one.

http://www.bosshardradio.com/gallery/view_album.php?set_albumName=1910DL

Click each thumbnail to enlarge, or click slideshow in the upper right. Once the slideshow starts, you can adjust how long each image is shown and you can set the show to loop.

Now decisions - to keep as found or clean up. There are a few minor problems: one locking nut is rusted frozed and the dit contact spring appears to need slight reshaping. I can hardly wait to put this old key on the air! 73, John

1202. SEVERE WEATHER SEMINAR SCHEDULED FOR MARCH 12

Yahoo group: Temple_ARC
Date: 2005-03-01 17:31:13 UTC
From: john_ke5c
Topic: 1202 Message: 1202

For your information and use, below is an announcement for the Bell County Severe Weather Seminar scheduled for Saturday, March 12. Please use this announcement to help spread the word across the county regarding this important program. FYI, the McLennan County seminar is scheduled for Saturday March 26.

Regards,
Gary Woodall (National Weather Service Ft. Worth)

##########

SEVERE WEATHER SEMINAR SCHEDULED FOR MARCH 12

Many of us are still recovering from the severe storms and flooding of 2004. However, the 2005 severe weather season is just around the corner. Are you ready? Would you and your family know what to do if a tornado or flash flood threatened? Do you know how to recognize cloud formations that may bring damaging winds, large hail, or a tornado? Do you want to learn more about how storms produce severe weather? As part of its area-wide weather preparedness campaign, the National Weather Service in Fort Worth will answer these and many other questions at the annual Bell County Severe Weather Seminar. The seminar will take place on Saturday, March 12, 2005, from 8:30 AM to 1:30 PM. The program will be held in Belton, at the Belton High School Auditorium, and will be co-sponsored by the Bell County Emergency Management.

The program will kick off with a review of severe weather safety tips and an overview of operations at the Fort Worth NWS Office. The weather staffs from the three Waco/Temple area television stations will discuss severe weather operations at their facilities. Representatives from the Bell County Amateur Radio Emergency Services will discuss amateur radio's role during times of severe weather. The seminar will include basic storm spotter training, and advanced storm concepts. The programs will be in multimedia format, featuring pictures and video of storms and tornadoes. Several participating agencies will also set up informational tables in the chamber lobby.

The basic spotter presentation will emphasize thunderstorm formation, severe weather production, and visual clues associated with severe storms. The advanced program will also discuss storm-environment interactions, theories on tornado formation, and the challenges associated with forecasting severe thunderstorm development.

"Storm spotters play a valuable role in the severe weather warning process", said Gary Woodall, Warning Coordination Meteorologist at the Fort Worth NWS Office. "We take the spotters' visual

observations and combine them with the data from our Doppler radar. This combination gives us the best possible picture of the storms and what's going on inside them."

The seminar is free, and members of the public are invited to attend. "If you come to this program, you will learn a lot about thunderstorms", Woodall said. "Even if you never become an active storm spotter, the information will help better prepare yourself, your family, and your coworkers for the severe weather season. Anyone who comes is welcome to stay for as little or as much of the program as they want".

The Bell County severe weather program is one of over 40 that the Fort Worth NWS Office will conduct between January and March 2005. However, this is one of only six in-depth seminars which will be presented. For more information on severe weather and the National Weather Service, visit the Fort Worth Forecast Office's website at http://www.srh.noaa.gov/fwd .

1203. New Experimental DIGTRX 3.00G

Yahoo group: Temple_ARC
Date: 2005-03-01 19:57:12 UTC
From: Charlie Schlieper
Topic: 1203 Message: 1203

Ham Radio software UPDATE:

Digtrx 3.00g came out Monday, February 28, 2005.
This is an early, incomplete, experimental version
of Digtrx which is compatible with WinDRM.

It is recommended only for Windows 2000 and XP.

It is not suggested for use by inexperienced users
at this time.

Download: digtrx300g.zip
< http://www.digtrx.com >
< http://planeta.terra.com.br/lazer/py4zbz/hdsstv/teste1.html#digtrx >

Roland's (PY4ZBZ) instructions are:
>Installation: Make a copy (with another name, Hamdrm for example) of the DIGTRX
>2.14.D folder, with all his sub-folders. Unzip the downloaded file into this new folder.
>It is compatible with WinDRM, only for file transfer, NO VOICE, and no BSR
>function, (that will still be implemented). In this experimental version, there can only
>be loaded the images contained in the " precoded " folder. Only for Windows2000
>and XP! This version is incomplete, still lacking many future functions.

From: John Dvoracek
Topic: 1212 Message: 1212

hello. we've gone through the web site and put all the pictures into a photo album called "gallery" in the main links on the left side of the page. we had a bit of trouble getting this going, and we know the colors clash a bit with the rest of the site, so we *may* look into that later.

the first page you get in the gallery will show you the "albums" - logical collections of pictures related to an event. the easiest way to view the pictures is click the album, then look in the upper right hand corner and click "slideshow". you can stop the slide show by clicking either gallery or the name of the album, both of which will appear as links in the upper right corner once the slide show is running.

if you have any pictures, digital or otherwise, of other club events, let me know. i can get film digitized directly as well as photos, but, of course, jpg's would be the easiest to use. i can add captions, so if you have older stuff, captions would also help.

1216. Promoting Ham Expo

Yahoo group: Temple_ARC
Date: 2005-03-07 23:24:04 UTC
From: Terry Hashman
Topic: 1216 Message: 1216

Hello from Arizona,

I have been bragging about Ham Expo on HF. I have some guys who would like to see some pics of the inside goings on. However, I don't have any showing the size of the building inside. If anyone has some pics showing the inside event that I could share, please email them to me. I looked at the home page gallery but didn't see anything that showed the size of the indoor portion. Hope to see you all there next month.

1217. Texas VHF FM Society Meeting

Yahoo group: Temple_ARC
Date: 2005-03-08 09:52:19 UTC
From: Steve Bosshard (NU5D)
Topic: 1217 Message: 1217

In accordance with the By-Laws of the Texas VHF FM Society, a Special Meeting of the General Membership is called for Saturday, April 9, 2005 at 1:30 pm at the Fellowship Hall of the Northwest Hills United Methodist Church in Austin, Texas. The address is 7050 Village Center Drive, Austin, Texas 78731.

6.2 SPECIAL MEETINGS. Special Meetings shall be called by the President when requested by a majority of the Directors. The agenda for Special Meetings shall be stated in the announcement of the meeting and shall be limited thereto.

Directors Bancook, Davis, Johnson, Petit and Reasoner requested the Special Meeting as a result of numerous comments and questions about actions taken at the Winter General Meeting. The agenda is as follows:

1. Honorarium to Meeting Facility
2. Bylaws amendments concerning the methods of voting adopted at the January meeting. This will include a motion to rescind the appeal from the decision of the President that the proposal fell within the provision of Section 6.6.3 of the By-Laws.
3. Budget and Dues Increase
4. By-Laws requirements for non-disclosure agreement
5. Motion to discharge survey committee from further work on the survey.
6. By-Laws amendment to clarify article 6.6.3
7. Amendment to article 10.2 of the By-Laws to require notice of all amendments.
8. Announcement of next meeting

Special thank you to Life Member, Joe Makeever-W5HS for organizing the room for the meeting.

This announcement will be posted on the Society website and will be included in the newsletter that will be published within the next several days.

Please advise if there are any questions.

Thank you.

Paul Baumgardner

President 2004-2005

Texas VHF FM Society

1220. WSJT Meteor Scatter 4.9.5

Yahoo group: Temple_ARC
Date: 2005-03-10 04:59:51 UTC
From: Charlie Schlieper
Topic: 1220 Message: 1220

Ham Radio software UPDATE:

There have been several recent UPDATES to
WSJT, (Versions 4.9.2 and 4.9.5). WSJT is a
weak signal communications program which
supports five operating modes-- FSK441, JT65,
JT6M, CW, and EME Echo mode.

Download at: http://pulsar.princeton.edu/~joe/K1JT

Note: Just download the "Updates" if you don't need
the full package. Some updates will retain your setup
but I have had to re-establish my <.INI> files for each new
version installed (WSJT492.INI and WSJT495.INI). As
an approximate aide to new users, I use FSK441 ampli-
tudes of A = 1.000, B = 0.550, C = 0.400, and D = 0.350.
Other radios and systems could vary, so these are only
approximate settings to get you started. Because of the
unusual nature of this mode, I set my ID interval to a more
frequent time of 6 mins. (FSK441 can sound like an
intentional jammer to the uninformed) T/R periods of
30 seconds can be used, but sometimes 60. Remember
that any of the suggested parameters above can vary, to
suit the specific mode and area use.

Enjoy Ham Radio!

1221. Digtrx 3.00K March 9, 2005

Yahoo group: Temple_ARC
Date: 2005-03-11 23:19:02 UTC
From: ka2emt_randy
Topic: 1222 Message: 1222

I have a BC780XLT that I haven't used in a little while. I set it up last week and attempted to program it using the copy of Winscan 780 that I got with it. I have used this program before with no problems. Now when I try to use it, it locks up and I get the infamous, "Program not responding" window and have to close it out. This happens every time I initiate the connect command of the program. It does connect to the PC, but the lock up occurrs when I try to navigate the program. All that said, here is my question. I'm wondering if someone in the group has a different control program for the 780 that I could borrow, of perhaps someone would be willing to program it for me. I've even tried programming it manually. It picks up the Bell county system fine, but I'm not getting a peep out of the Ft. Hood system, and that's the one I'm most interested in. Anyway, I hope there's someone that can help, Thanks,

Randy/ KA2EMT

1227. DIGTRX 3.01 March 14, 2005

Yahoo group: Temple_ARC
Date: 2005-03-14 20:06:24 UTC
From: Charlie Schlieper
Topic: 1227 Message: 1227

Ham Radio software UPDATE:

Digtrx 3.01 was released March 14, 2005.

Explanation Notes: DIGTRX, which is an RDFT
program (Redundant Digital File Transfer), has added
compatibility to the (non-voice) digital file transfer modes
of WINDRM.

The first ham radio program based on DRM was HamDRM.
DRM stands for "Digital Radio Mondiale." Both systems
use MULTIPLE CARRIERS. Digtrx uses 8 at present, and
WinDRM uses more.

The RDFT carriers, eight or more, are usually phase and/or
amplitude modulated.

BBR in Digtrx, stands for "BAD BLOCK REPORT," and has
evolved into BSR in WinDRM, "BAD SEGMENT REPORT."
Treat them as the same. When you don't receive a file in
WinDRM, left click on BSR to see if you just have a few
bad segments. If you do, and are involved in a QSO, you
may simply click OK, and receive the needed corrections
for a perfect file.

A few more MNEMONICS to absorb...
MSC = Main Service Channel (4/16/64QAM)
FAC = Fast Access Channel (4QAM)
QAM = Quadrature Amplitude Modulation
FEC = Forward Error Correction
CRC = Cyclic Redundancy Check (checksum)
COFDM = (Boy, this is really a good one!) ---
Coded Orthogonal Frequency Division Multiplex
CONSTELLATION = The points that represent the
extremity of the possible vectors in a QAM wave.

Download: digtrx301.zip (883 kB)
< http://www.digtrx.com >
< http://planeta.terra.com.br/lazer/py4zbz/hdsstv/teste1.html#digtrx >

Enjoy Ham Radio!

1228. Fw: TARC Class 2005

1229. WSJT Meteor Scatter 4.9.6

Yahoo group: Temple_ARC
Date: 2005-03-15 20:49:41 UTC
From: Charlie Schlieper
Topic: 1229 Message: 1229

Ham Radio software UPDATE:

WSJT Meteor Scatter Version 4.9.6, March 15, 2005.

WSJT is a weak signal communications program which
supports five operating modes-- FSK441, JT65, JT6M,
CW, and EME Echo mode.

Mode Notes: (FSK441 is a popular 2m fast meteor scatter
mode, JT6M is optimized for meteor and ionospheric
scatter on 50MHz, JT65 is a very sensitive troposcatter
and EME mode, the CW mode uses 15wpm messages
structured for EME, and the EME ECHO mode measures
your own signal echoes from the moon)

Download at: http://pulsar.princeton.edu/~joe/K1JT

Changes in Version 4.9.6:

* WSJT 4.9.5 failed to decode some files which had a relatively
high S/N ratio and good Sync level. This bug was fixed!

* Some new message formats were provided for sending signal
reports, and a few other minor changes made.

Enjoy Ham Radio!

1230. FYI: ProBPL Bill in Texas Senate!

FYI Senate Bill (SB)1748
Looks like our own Senator Troy Frasier has introduced the BPL Bill in the Texas State Senate. The text of the bill can be viewed going to http://www.capitol.state.tx.us/ and doing a quick "bill text search" and inserting the words BPL. Troy Frasier represents an area that stretches from Temple and Belton all the way to San Angelo and Abilene. There are a lot of active hams in this large area. I am thinking that they will not be pleased that Mr. Frasier has sponsored a bill that appears to be so detrimental to their hobby.

Wud u all think?

Well, this is a national problem and the ARRL is up against a formidable (very rich) bully. I think Mr. Frazier has already made up his mind, but let's tell him what we think anyway. For most of us:

SENATE DISTRICT 24 - SENATOR TROY FRASER
Capitol Office: CAP 1E.15
Capitol Phone: (512) 463-0124
Capitol Address: P.O. Box 12068
Austin, Texas 78711
District Address: P. O. Box 12068
Austin, TX 78711
District Phone: (254) 939-3562
State District Offices

HOUSE DISTRICT 55 - REPRESENTATIVE DIANNE WHITE DELISI
Capitol Office: CAP 1N.12
Capitol Address: P.O. Box 2910
Austin, TX 78768
Capitol Phone: (512) 463-0630
District Address: 3000 S. 31st Street, Suite 505
Temple, TX 76502
District Phone: (254) 774-9888

73, John

1233. DIGTRX 3.02 March 16, 2005

Yahoo group: Temple_ARC
Date: 2005-03-16 19:21:42 UTC
From: Charlie Schlieper
Topic: 1233 Message: 1233
Attachments: 1 described; binary payloads are missing from this source WARC

Ham Radio software UPDATE:

Digtrx 3.02 was released March 16, 2005.

Download: digtrx302updt.zip (525k)
< http://www.digtrx.com >
< http://planeta.terra.com.br/lazer/py4zbz/hdsstv/teste1.html#digtrx

This latest release has a "progressive picture display" feature.
When this option is checked, the received picture can be shown progressively for (JP2, JPG, and BMP) pictures. JP2 works best,
with increasing quality as it is received. JPEGS will be shown
from top to bottom, and BMPs just the opposite. Other picture formats may not allow a progressive display.

Enjoy Ham Radio!

1234. Senate Bill 1748 BPL in Texas

Yahoo group: Temple_ARC
Date: 2005-03-15 21:28:29 UTC
From: Gerald L. Richmond
Topic: 1234 Message: 1234

Please share this with all Amateur Radio Folks in Texas!!

Contact your Senators and Representatives.

There is a Senate Bill on the table right now that will allow any Utility company in Texas to implement a BPL solution. And may further Destroy High Frequency Communications

The Bill says NOTHING about interfering or interference to other services. i.e. - Radio spectrum users.

Even if you are not represented by Mr. Fraser, It will effect you too if they get this Bill past the Senate and House.

Again, Contact your Senators and Representatives.

SENATE DISTRICT 24 - SENATOR TROY FRASER

The Honorable Troy Fraser The Honorable Troy Fraser
P.O. Box 12068 1920 North Main, Suite 101
Capitol Station Belton, Texas 76513
Austin, Texas 78711 (254) 939-3562
(512) 463-0124 fax: (254) 939-7611

The Honorable Troy Fraser The Honorable Troy Fraser

Temple, TX 76502
District Phone: (254) 774-9888

FYI - BURNET TEXAS IS A BPL TEST SITE - AND THAT IS RIGHT IN SENATOR FRASER'S BACK YARD....

Gerald Richmond - N5ZXJ
ARES EC Bell County

Forwarded from our Section Manager

A Senate Bill # 1748 Filed by Senator Troy Fraser of Horse Bay, TX and covers District 24

Link to the Bill here: http://www.capitol.state.tx.us/tlo/79R/billtext/SB01748I.HTM

SB 1748 was filed in the TEXAS Senate on Friday, the last day to file bills for this session. This little jewel will allow any Utility company in Texas to implement a BPL solution. The NTX BPL Task Force speaks from experience when saying that Utility companies care little about interference.

TXU knows that the Irving BPL installation is causing major interference. NTX BPL Task Force lead Jory McIntosh, KJ5RM, provided proof to them in person. TXU has had complaints filed against them with the FCC and they are still operating this system and trashing the spectrum around the Irving BPL test site.

I urge each of you to write your members in the Legislature or stop by their offices and discuss this issue. Here is a link to the proposed law (note that if the link below is broken up into multiple lines, you will need to cut and paste each line and re-assemble the link in your browser).

http://www.capitol.state.tx.us/cgi-bin/tlo/textframe.cmd?LEG=y&SESS==R&CHAMBER==S&BILLTYPE==B&BILLSUFFIX=748&VERSION==1&TYPE==B

You can learn more about the threat of BPL on the ARRL web site at http://www.arrl.org/tis/info/HTML/plc/

If you have any questions please don't hesitate to contact the ARRL NTX BPL Task Force at kj5rm@....

With the introduction of this Senate bill, the fight against the threat of BPL has never been more important. I urge everyone to get involved.

73,
Roy Rabey - AD5KZ
ARRL NTX SM

Here is a couple of sites you can go for more information.

1. www.texasbpl.com - This site covers all the current issues in Texas concerning BPL. Recordings of the Irving BPL site are located here as well showing in real life how bad the interference is.

2. www.arrl.net/bpl - This is the ARRL web site containing tons of data on BPL from all over the world.

3. www.gobpl.com - A great site with lots of information concerning BPL that is very organized.

Yahoo group: Temple_ARC
Date: 2005-03-18 00:21:33 UTC
From: john_ke5c
Topic: 1236 Message: 1236

If you are one of the few who have APRS working and live generally in this area, turn it on and see if you show up:

www.tarc.org - select "APRS experimental"

You must be a paid up club member to show up on the map. I may not pursue this further, or I may. Right now it's just at the proof of concept leverl. It's hard to find a good orthogonal map of the area. The current scale is such that close in stations will appear on top of each other in reverse alphabetic order. I think it's reverse ...

1237. Re: [Temple_ARC] FYI: ProBPL Bill in Texas Senate!

Yahoo group: Temple_ARC
Date: 2005-03-18 12:27:04 UTC
From: TOM BLACKWELL
Topic: 1230 Message: 1237

I have subscribed to the Temple ARC Yahoogroup, and I am now receiving the EMail.

While I won the election for North Texas Section Manager, I will not take office until April 1. So while I can take your phone calls and send you EMail, and meet with you, I can't act as Section Manager until then. (My EMail address: n5gar@..., Home phone: 214-361-5275.) I have already met with members who have traveled long distances to see me about new ARRL appointments, and other concerns that I will be able to address after I take office. I have received and answered many, many EMails.

I have plans for this bill. After April 1 I expect to provide information about it and my recommendations on the ARRL NTX web page, as well as by EMail. When I met with David Sumner last August he asked me for my recommendations on BPL. I'll have this ready for him soon. I am also planning to attend many of the hamfests and conventions.

Also, some of you in the Temple area may live in other ARRL Sections. Senator Fraser's district takes in a portion of the West Texas Section and the South Texas Section. Both have excellent Section Managers. I understand there is an election going on now for the position of West Texas Section Manager. They are conducting a forum on BPL at the Midland hamfest this weekend. http://www.w5qgg.org/hamfest2005.html

For those of you who contact Senator Fraser or any other elected officials, it would help to see that I have information about their responses.

I was present in the auditorium of the Las Vegas Hilton when FCC Chairman Michael Powell first announced his support for "frequency sharing" and BPL. So I have seen this issue develop from the beginning.

Here is the link for the status of the new Texas BPL bill, by Senator Troy Fraser (R-San Angelo):

http://www.capitol.state.tx.us/cgi-bin/db2www/tlo/billhist/actions.d2w/report?LEG=79&SESS=R&CHAMBER=S&BILLTYPE=B&BILLSUFFIX=01748&SORT=Desc

Residual Noise Pollution in Modern Phase-Locked Loop Receivers

THE PROBLEM

Do you feel that the bands are much noisier than they used to be? Do you often turn on your rig and call a station time and time again only to get no reply? Well, the problem may be Residual Noise Pollution. When you turn your rig off, some of the signals you have been copying become trapped inside the phase-locked loop of your receiver and are unable to escape. One sure sign that you are suffering from RNP is when you turn your rig on after a few days and hear the same station that you heard immediately before you last switched off. These rogue signals accumulate and will remain inside the rig unless steps are taken to flush them out.

THE CURE

The cure for RNP is fairly basic but the author can obviously take no responsibility for clean-ups that go wrong. Remember, there is no compulsion to try this. This system works very well for any solid state rig but some problems may occur when flushing out stubborn signals from older, tubed rigs.

STAGE ONE

Remove all external appendages from the rig. This means all knobs, buttons, connectors etc. Don't forget to disconnect from the power supply first!

STAGE TWO

Peer inside the case. If any obvious blockages can be spotted, remove them with a bent paper-clip or with a piece of gum stuck to the end of a pencil. Quite often no problem will be obvious. This is because the rogue signals are, to use a technical term, skulking.

STAGE THREE

Place rig carefully into a washing machine (a clothes washer). Experience has shown that the best results are obtained with a short biological pre-wash, a synthetics wash, a warm rinse and a fairly long spin. Do not use fabric conditioner. If in any doubt at all refer to the washing instructions at the back of the manual for your rig. If you have no washing instructions play safe and wash on a delicate fabric setting.

You may find that the rig will dent the inside of the wash-drum during the spin but don't let the noise deter you. The end result will be worth it.

STAGE FOUR

Obviously when dealing with electrical appliances it is essential that they are absolutely dry before switch on, so it is now time to tumble-dry the rig. A warm dry for about an hour should do the trick. Remove the rig and carefully check underneath any surface-mounted devices to make sure there is no residual moisture. To be absolutely sure shake the rig

vigorously for a few seconds and listen for sounds of water slopping around.

If some minor discoloration of the outside casing can be tolerated, the rig may be dried out on top of a slow barbecue.

NOW - THE RESULTS!

Replace all knobs, buttons and connectors. Reconnect to power supply. Switch on. You will be amazed at the difference! No noise! You have cured Residual Noise Pollution. Your rig will never be infected with residual signals again!!

Disclaimer: Do Not Attempt any of the above steps!
This article is idealy suited for APRIL 1st, or just for
some very special people.

1254. Digtrx 3.06 March 28, 2005

1255. Article on Senator Fraser's BPL Bill (full article)

Yahoo group: Temple_ARC
Date: 2005-03-29 11:12:26 UTC
From: TOM BLACKWELL
Topic: 1255 Message: 1255

There was a technical problem for some people with the link to the article on Senator Fraser's BPL bill. So here is the article:

- - -

Bill would allow Internet over power lines

By R.A. Dyer
Star-Telegram Austin Bureau

AUSTIN - High-speed Internet could be wired into Texas homes through utility power lines -- meaning more homes would get access to the technology -- under a bill pending in the Texas Senate.

But there's a catch: As currently written, the legislation could spread the multimillion-dollar cost to all utility customers -- even those who don't need Internet service or want it. The utility would then get to keep 60 percent of any resulting profit -- while only 40 percent would be returned to electric customers through a credit on their bills.

Utility representatives say the legislation makes sense, consumer groups say it's a bad deal for customers, and the Republican lawmaker who is carrying the bill said controversial details are likely to change before it becomes law.

"The theory is to try to get broadband to areas that are not currently being served by DSL or cable companies -- to get another choice out there," said state Rep. Troy Fraser, R-Horseshoe Bay, about Senate Bill 1748.

Welcome to the complicated world of broadband over power lines, or BPL, which holds the promise of spreading Internet service to the farthest reaches of the state -- but which also carries a substantial price tag.

With BPL, special equipment known as nodes would be connected to power lines that run between electric substations and individual homes or businesses. The nodes would inject the Internet signal into the power lines; individuals would receive that signal through modems.

A company called Broadband Horizons has already begun serving about 25 businesses through pilot projects in two small Central Texas towns, Burnett and Weimar. Mike Bates, the company's vice president, says the new technology works -- although it's not yet economically feasible to serve isolated homes.

He estimates the cost of equipment upgrades at $300 to $400 per house. Others have put the cost at about $1,000 per home.

"We find this technology conducive to bringing broadband service to [small and medium-sized] communities -- the underserved communities -- primarily because the line is already there," Bates said. "We've been up and running since last

summer [with the pilot projects], and the results have been very good."

Universal access

On at least one point, consumer and utility groups agree: The reach of the Internet should be extended as far as possible. Tom Morstad, a policy analyst for the Austin office of Consumers Union, likened the goal of "universal" Internet access to the rural electrification projects of the last century.

"The state should certainly continue to explore alternatives for expanding broadband access statewide," Morstad said. "Broadband is to the 21st century what telephone and electric service was to the last century. This is economic development. It's tele-medicine, and it's education."

But where consumer and industry groups part ways is on how Texas should get there -- and who should foot the bill. Many detractors believe that the new technology is being oversold and -- despite the limited pilot projects -- remains largely unproven.

They also complain that under the deal that TXU and some utilities want -- the plan as outlined in the initial Fraser bill -- power companies could get into this very risky venture at no risk to themselves.

Rather, the utilities could pass on 100 percent of the upgrade costs to their electric customers, and then reap 60 percent of the profits. Electric ratepayers would receive the remaining 40 percent through a credit on their bills.

"That is what offends me the most," said Geoffrey Gay, an attorney who represents Fort Worth in utility matters. "It's not just the silliness of making the electric customer pay the cost -- but that [the utility] can make profit off this through some other mechanism, and then tell the ratepayers that they can get credit for just 40 percent. That's really offensive."

But Stephen J. Houle, TXU's vice president for corporate technology, said passing on the cost to electric customers makes sense because BPL potentially improves the overall efficiency of the utility's electric operations.

For instance, broadband over power lines can let utilities remotely monitor their electric substations, it allows them to detect equipment failures and it can provide technicians with real-time data about equipment operations in remote locations, Houle said.

Houle estimated the cost at $300 million to $600 million to make BPL available throughout TXU's North Texas service territory. "Hopefully, after we get this installed and you get just outstanding service ... you'll be so happy that you'll think it's a bargain," he said.

He said that under Fraser's bill, utilities could lease out their lines to independent BPL operators -- theoretically at little or no cost to ratepayers.

Fraser, chairman of the Senate Business and Commerce Committee, described the legislation as a starting point for discussion. He said that the bill was

brought to him by utility representatives and that the final version will incorporate changes to protect consumers.

"The intent is not to spread the cost to everybody over the system -- that is not what we're trying to do," Fraser said. "This is an unproven technology -- there are pilot programs going forward, but we don't know for sure if this technology is going to work."

But he said it's important to consider BPL because of the potential to extend the Internet's reach, and because it could eventually lead to lower Internet prices by bringing more competitors to the market.

"The technology is not there yet, but it could be over the long range that all services for the home -- electric, telecom, cable and high-speed Internet -- possibly could be delivered from the same source and could be monitored from a remote location," Fraser said. "But what we can't do is give the [electric utilities] an unfair competitive edge."

Senate Bill 1748 will probably come up for discussion in Fraser's Business and Commerce committee within a few weeks.

Subject: Real AM Rig

Joe..Here is a picture of the old time 75M AM rig that I used to operate
when I lived in South Carolina. It belonged to W8DFV (SK) and ran about
150W. You can see (or touch) every part.

Oscillator is on extreme right of top deck, buffer and then final.
Unpainted board is antenna tuner.

Bottom deck is Power Supply on right and Heising (sp) Modulator on left
with modulation meter setting on lower deck.

I don't remember the tube line-up- perhaps you recognize the final.

It is an exact copy of his old rig from early 30's or late 20's.

His son, also a ham (SK) and I used to take it to hamfest and operate it On
75M. Old timers would come by and watch us operate and tears would come to
their eyes.

Sorry it's so dark but I'm not smart enough to edit it.

73, Howard.

P.S. How do you get peanutbutter out of the jar-after it's been in the
refrigerator?

The foundation for the 180 Ft Rohn SSV is 16X16X4 with 2, 7/8" rebar mats on 1Ft square grid. Each leg has 8, 1/2"X36" anchor bolts. The loop is approximately 600 Ft of #14 copper with the feed point on Rohn55G@70Ft, and the corners on Rohn 25G at 45Ft above Ground. Ground elevation is around 1050Ft. Resonance is at 1791Khz. Antenna is fed with 450 Ohm line into a 9:1 balance transformer and RG8 Coax for 35Ft to the tuner.

73,

Steve

1272. Air Show Volunteers

From: darwindoa
Topic: 1272 Message: 1272

Let me know ASAP if you would like to volunteer for airshow duty on May 6, 7 and or 8th. It will be like last year. We will be handling check in/out of radios, some communications, and battery swaps on their commercial rigs and possibly liason with the weather nets if needed.

We have openings for Friday evening May 6 up until 9PM (there will be a night airshow). Also on Saturday in the later afternoon and on Sunday afternoon.

Of course, volunteers get free entry into the show and our vantage point is great.

Folks I already have signed up are:
Jim Coleman
Oscar Houser
Ross and Jan Gregg
Tom Olsen
Ron Thompson
Larry Fuhs

1273. Digtrx 3.08 April 14, 2005

Yahoo group: Temple_ARC
Date: 2005-04-14 18:30:02 UTC
From: Charlie Schlieper
Topic: 1273 Message: 1273

Ham Radio software UPDATE:

Digtrx 3.08 was released April 14, 2005.

DOWNLOAD:
digtrx308updt.zip (762 kB) (for update 3.07)

< http://www.digtrx.com >
< http://planeta.terra.com.br/lazer/py4zbz/hdsstv/teste1.html#digtrx

What´s new:
(Summarized: Improvements were made, with bugs corrected.)

-----Following Infomation provided by Roland, PY4ZBZ:
> - New HamDRM.dll with faster sync and better resolution for texts in the
> waterfall (Hanning window).

> - In spite of the HamDRM (or WinDRM and HamDream) mode already having
> CONTINUOUS identification, (the ONLY mode for Hams with this feature!),
> you can now include a waterfall ID (or other) at the beginning of the
> transmission, like in DIGTRX RDFT modes. In setup, "Use waterfall ID."
>
> WARNING: The use of IrfanView in DIGTRX is just to open corrupt or
> incomplete files. Because DIGTRX doesn't open such files, it happens
> that IrfanView doesn't get to open any corrupt or incomplete file, and in
> some cases, (<5%) IrfanView FREEZES when trying to open corrupt
> or incomplete files!
>
> In that case, it only gets to be turned off by the task manager.
> Therefore, the use of IrfanView for the progressive display can accumulate
> many instances, and turn CPU to very slow. In that case, verify with the
> task manager, and close the IrfanView instances. Use IrfanView for
> progressive display at your own risk !

Enjoy Ham Radio!
Charlie, N5TD

Hello everyone. My name is David Pratt and i'm a recently new amat.
radio oprt. My callsign is KE5EGI and I live in Waco, just a few miles
from you. :-)
What I would like to find out is if it would be possible to join
Temple ARC even though I live 30+ miles away. i coudl attend meetings
from time to time, if not every month.
I do listen to 147.140 at night here at home. My mobile also makes it
as a base.
I thank you for your time.

David Pratt

Date: Sun, 17 Apr 2005 13:54:08 -0700 (PDT)
From: Joe Wileman <aa5op@...>
Reply-To: Joe Wileman <aa5op@...>
Subject: Hamfest Registration ON THE WEB

FYI>>>>

The Hamfest registration form for the July 9th Hamfest in Texas City is on the TARS WEBSITE http://www.tidelands.org. If you know anyone that would like to pre-register for the Hamfest and firm up a table or two for sure, now would be a good time. Be sure to pass along this info during nets, meetings and Hamfest.

It looks like this is going to be the only Hamfest this year in this area, so we are looking for a big turnout and a real demand for tables. We have quite a few tables, but it seems every year we sell out, so pass the word, the tables are available NOW....

If anyone needs any additional information,not available on the web, please contact me.

From: John Dvoracek
Topic: 1284 Message: 1284

Eula Jett asked that I pass this on to club members:

1. Yaesu FT101E Base Radio, Turner super sidekick microphone, large external speaker, SWR meter, frequency counter for $250.

2. Wilson 500 Antenna Rotater new still in box never used for $100.

Contact Larry Poulter at 773-3176.

COMMENTS: My first radio was an FT101E about 25 years ago, so I was curious and checked the completed items in the last 28 days on eBay. Six working FT101E/EX's were sold at an average price of $213. Three parts radio's sold for about $150 each. If you're looking for a first radio, I'd still try to find a used solid state rig for not much more, but if you're a collector, maybe the FT101E will interest you. No Wilson WR-500's sold in the last 28 days, but one is currently at $50 with 18 hours left. 73, John

Ham Radio software UPDATE:

Digtrx 3.10 was released April 26, 2005.

DOWNLOAD:
digtrx310updt.zip (759 kB) (for update 3.09)
http://planeta.terra.com.br/lazer/py4zbz/hdsstv/teste1.html#digtrx

What's new, from Roland, PY4ZBZ:
> - Included the option " Auto SEND segments " for automatic requested
> segments transmission after receiving a valid BSR.
>
> - Included IMD meter: it measures the transmitter distortion using the
> tuning tones, at the receiving station. It should be larger than 15 dB.
>
> - Included tuning error meter using the tuning tones or
> the DRM signal related to the DC freq. programmed in Mode.
>
> - Included option to disable the automatic switch to the Status display
> when there is some new status information.
>
> - Made small improvements and corrected some bugs.
>
> WARNING: IrfanView is one of the rare free graphic programs that is > able to open
corrupt or incomplete pictures files.
>
> Therefore, DIGTRX has the option of using IrfanView to visualize corrupt or > incomplete
files, and also to allow progressive displays of JP2, JPG
> or BMP files, simply trying to open the incomplete file at regular intervals
> before the whole file is received.
>
> But certain corrupt or incomplete files can freeze IrfanView.
>
> Therefore, if the option " Progressive RX display " is enabled, several
> instances of IrfanView can remain open and not responding, turning the
> computer extremely slow. In these cases, the instances of i_view32.exe
> can only be closed using the Window´s task manager.
>
> Without IrfanView, DIGTRX will show the image file just at the end of the
> reception, and only if this file has no errors, but without the risk of slowing
> down the computer.

1291. BPL TXU vs Reliant

Yahoo group: Temple_ARC
Date: 2005-04-28 17:36:56 UTC
From: Tom
Topic: 1291 Message: 1291

Just got a "switch to Reliant Energy and save 10% over TXU" offer in the mail. I know TXU is behind the Frazier BPL bill in the state senate. Just wondering if anybody knows if Reliant is behind this mess also. I may condider a switch to a new power supplier just based on that alone. Did a quick search on the web but didn't find an answer to my question.
Anybody know?
73s
Tom

1292. FW: [Temple_ARC] BPL TXU vs Reliant

Yahoo group: Temple_ARC
Date: 2005-04-28 18:23:52 UTC
From: Benton Goodnight
Topic: 1292 Message: 1292

Reliant Energy is Houston Power and Light under their retail name. Though I have no direct knowledge of their position, since they do own probably the second largest set of wires in the state (and maybe the United States) I would assume that they are for it also. Should you choose to switch, do so because you believe that they will save you money. Your electricity will still be flowing through TXU Electric Distribution wires and will be serviced by TXU Electric Distribution Company just the same.

From: Glenn Blum
Topic: 1293 Message: 1293

Good evening,
It has been sometime since I have operated digital modes. Since then I bought a new computer and I was wondering is it possible to use a computer to radio interface via USB port?
I know that there is some USB to parallel adapters, but has anyone used this kind of set up to run a radio interface?

Thanks,
Glenn

1301. Poll for Belton Ham Expo volunteers

Yahoo group: Temple_ARC
Date: 2005-05-02 17:42:21 UTC
From: John Dvoracek
Topic: 1301 Message: 1301

We are going to register either www.beltonhamfest.org or www.beltonhamexpo.org. Mike has no preference. I like beltonhamfest a little better because most folks i know think of it as a "hamfest" rather than a "ham exposition" although it is held at the expo center. I'm still thinking they would remember "beltonhamfest" a little more easily than "beltonhamexpo". If you have worked as a volunteer at any of the prior occurrences, please e-mail me your preference, or tell me you have none. We'll move ahead in a few days. Thanks! cul, john

TARC
This bill is a no risk windfall in favor of the utilities at public expense. This bill is also anti- amateur radio. Whatever you point of view or emphasis, please take the time to respond to those members of the legislature who are in a position to allow for public input. Hopefully we can correct Sen. Frazier's folly. I emailed each member and stated that public input was required. This bill is a virtual windfall profit to the already enriched electric utilities such as TXU.

To the 2 minority members (Democrat) members of this committee, I encouraged them to perform their proper role as "loyal opposition" to what appears to be a corruption of the political process.

Subject: Wouff-Hong.htm

A very interesting story for those who have never heard of the 'Wouff-Hong'.

Amelia, would you please consider putting this in the next bulletin ! A big thanks to Al Klokau [W5VSH] for bring this up and to Lenda Barnes [WD5BFY] for passing it on at the Club meeting. Dennis, K5AVT

The Meaning of the Wouff-HongThe actual Wouff-Hang given to the ARRL by T.O.M.

"The Wouff-Hong is amateur radio's most sacred symbol and stands for the enforcement of law and order in amateur operation."

The Radio Amateur's Handbook, 1930, page 11

My Wouff-Hong -KG2IC

I checked my backpack once again; just to be sure it was still there. It was, and its finish though now dull, still bespoke of a proud past. Of my radio purchases over the past 5 years, this simple item, purchased for less than one would spend on a lunch, had eclipsed them all. Let me explain.

On August 14, 1999 Bill K2LNU <http://hamgate.sunyerie.edu/~buffaloam/k2lnu.htm> and I attended the moving sale of our friend, Fred Hammond VE3HCFred Hammond VE3HC <http://www.kwarc.on.ca/hammond/fred.html> in Guelph, Ontario. I had first met Fred 4 years ago, when I was still quite new to the hobby. Fred, licensed since 1929, had established and maintained the outstanding Hammond Museum of Radio <http://www.kwarc.on.ca/hammond/index.html> in his hometown of Guelph. Bill and I, along with many others, had become frequent visitors to his museum. His warm "V.. E.. 3.. H-Henry..C-Charlie" had greeted me several times on 75 meter AM as a return to my call of "CQ". However, in 1998 Fred sadly suffered a stroke, and although recovering

<http://www.kwarc.on.ca/fred/index.html> , has been absent from the air.

At the sale, much of the gear was quickly snapped up, but a garage full of cardboard boxes containing radio parts was left largely untouched. You know the type of the boxes I am speaking about, the kind found under the tables at many a hamfest, covered with alternate layers of dust and grime, so often overlooked by those in quest of more "glamorous" finds. I have always found such boxes truly the proverbial diamonds in the rough, time capsules of radios rich legacy. Needless to say, I was soon busy rooting around in the parts boxes in the garage, boxes that had caught the attention of only a few other amateurs.

<http://hamgate.sunyerie.edu/~buffaloam/images/81499_ve3hc_wlf-hng_side_view
.jpg>
<http://hamgate.sunyerie.edu/~buffaloam/images/81499_ve3hc_wlf-hng_side_view
.jpg> KG2IC's Wouff-Hong
<http://hamgate.sunyerie.edu/~buffaloam/images/81499_ve3hc_wlf-hng_side_view
.jpg> I saw a nearby ham pickup, examine curiously and then return to the box an odd shaped metal object. The size and shape certainly looked familiar, but I discounted it, as I would never expect to find such in a box of radio parts. Still, my own curiosity now peaked, I walked over, bent down, and picked up the item for myself. Yes, I thought, as I carefully turned it over in my hands, it really is. Although the once shiny finish was now discolored with age, and caked with decades of dust, there was no mistaking the classic form; it was a "Wouff-Hong".

Hiram Percy Maxim W1AW, aka T.O.M.In 1917, stories by an anonymous writer with the pseudonym "The Old Man", or "T.O.M." began to appear in the American <http://www.arrl.org> Radio Relay League's (ARRL) monthly publication QST. Titled the "Rotten Radio" series, they brutally assailed and exposed the poor operating practices of the day with caustic satire and humor. It was in one of these stories, entitled "Rotten QRM", that T.O.M. blasted the gibberish he'd overheard in one particular QSO, citing as an example the words "wouff hong", which apparently was either a concocted abbreviation, or someone's poor attempt at sending.

At the time of the articles T.O.M. did not know what a Wouff-Hong was, but he later adopted it as a disciplinary object with which to both flail bad operating practices and inflict punishment on the perpetrators. It is said that in the following era he had, half jokingly, proposed its use as an instrument of torture and discipline, to maintain decency and order in the ham radio community.

It was early in 1919 that T.O.M. contributed an article to QST called "Rotten Starting", criticizing the slow progress of the United States government to allow hams to operate again. It finished with "I am sending you a specimen of a real live Wouff-Hong which came to light when we started to get our junk out of cold storage. Keep it in the editorial sanctum where you can lay your hands on it quickly in an emergency. We will soon be allowed to transmit, and then you will need it." Accompanying this article was a weird, misshapen, wooden, wire-bound two-pronged tuning fork-like

object. Yes, the Wouff-Hong. The first portrait of the Wouff-Hong appeared in QST for July that year. At each Board meeting, the Wouff-Hong stood on display, to the blanched looks of the humbled Directors."

Only after his death, was it was revealed to all that T.O.M. had actually been Hiram Percy Maxim, the founder and first President of the ARRL. It is said that he took the secret of the origin of the first Wouff-Hong to his grave.
<http://hamgate.sunyerie.edu/~buffaloam/images/81499_ve3hc_wolf-houng_base_b.jpg>
<http://hamgate.sunyerie.edu/~buffaloam/images/81499_ve3hc_wolf-houng_base_b.jpg> Wouff-Hong dated 1938
<http://hamgate.sunyerie.edu/~buffaloam/images/81499_ve3hc_wolf-houng_base_b.jpg>

And here, in my hands, was a Wouff-Hong, long considered amateur radios most sacred symbol of law and order. Cast into its base were the words "ARRL National Convention Chicago, IL Sept 3 4 5 1938". I was holding an artifact from the Golden Age of Radio, made some 61 years ago. I found myself thinking back, wondering about the person that had brought this back from the Convention, now some six decades into the past.

What were the concerns and thoughts of this fellow radio amateur a few short years after the Great Depression? Would he even recognize the hobby today, and what would he think about radio signals now being passed through satellites, computers, and even the Internet? Had radio fulfilled its once bright promise? Would he find today's amateur holding to the high principles of the past? I had to wonder if he would be pleased by what he found, or somehow sadly disappointed? Indeed, how would T.O.M himself see things? Would his famous "Rotten Radio" articles still be written, and if so, who or what would be the targets? Had we won the technology battle, only to lose the war for the spirit of the hobby?

Startled back to reality by the crash of a carelessly dropped metal panel upon the garage floor, I again considered my find. Possibly this "Wouff-Hong" was some sort of souvenir, or perhaps an award handed out at the Convention, I still have to research the exact origin. Delighted, I paid the requested $5 for the item, and carefully placed it with in my backpack for safe keeping until the sale was over. $5 was indeed a cheap price for a journey back into radios past, affording me the opportunity to examine my own beliefs and hopes for the hobby.

Did this "Wouff-Hong" at one time belong to Fred VE3HC, or was it simply a museum piece carelessly discarded into one of the boxes, discarded and forgotten by a generation that often pays little tribute to past? That question has yet to be answered, but to me, the origin of the piece is not as important as the meaning attached to it, the rich, proud legacy of a magical hobby and the remembrance of a friend.

-Bruce KG2IC

1311. Satellite Contact via VO52

Yahoo group: Temple_ARC
Date: 2005-05-11 05:08:31 UTC
From: Charlie Schlieper
Topic: 1311 Message: 1311

I just made my first contact via the new HamSat, VO-52.
The signals were very strong using 22-ele RHCP Yagi on
downlink, and 40-ele RHCP Yagi Uplink. Receive was LSB
at 145.8962 MHz with GAASFET preamp, and transmit was
about 30watts USB at 435.2609 MHz. This new satellite
almost passed directly over Temple, crossing at about 31
miles to our SE.

The Hamsat beacon is 145.936 MHz, and the Linear Transponder
works great! The center of the transponder downlink is 145.900
MHz, and the center of the transponder uplink is 435.250 MHz.
Telemetry is 145.860 MHz.

Enjoy Ham Radio!
Charlie, N5TD

Austin office: (512) 463-0576, District office: (214) 891-1776

Information on the Regulated Industries Committee is available here:

http://www.house.state.tx.us/committees/425.htm

BPL supporters have heard that citizens are organizing to oppose their Texas Senate Bill 1748. They now want to suspend the House Rules and cancel the public hearing at the House Regulated Industries Committee. They want Committee Chairman Phil King (R-Weatherford) to hold a meeting of the Committee upon adjournment of the House, and take a vote to pass SB 1748 at a special meeting on the floor of the House at his desk - on Tuesday, May 10. No public testimony would be allowed.

On hearing about this, I telephoned every office of the Committee members, with my objections. I have told them that citizens want to present testimony and evidence at a public hearing to work out the "unintended consequences" with this Pro-BPL bill.

Chairman King's office had previously told me there would be a public hearing on the bill on May 10. However, this was never posted on the official agenda, so I was not able to announce it.

For a detailed discussion of the BPL issue in Texas, see my web page at:
